Questions abound on Clancy holdout juror

Active restraining order, eviction notice raise flags on trial selection process

By Shelley Murphy, Chris Serres, and Shannon Larson
GLOBE STAFF

The lone holdout juror in the Lindsay Clancy trial who was accused of forcing a mistrial has his own history with the justice system, including a past charge for domestic violence — raising deeper questions about the jury selection process in the high-profile case.

The juror is Michael P. Desronvil, 48, of Bridgewater. His personal legal issues were first reported by

NBC10, though he was not identified by name. But the Globe confirmed his identity through photos published online, court records, and an interview with one of his fellow jurors. He had an active civil restraining order against him for allegedly assaulting his nephew and was facing eviction proceedings even as he was weighing evidence against Clancy, who admitted strangling her three children in January 2023 but pleaded not guilty by reason of insanity.

Repeated efforts by the Globe to reach Desronvil were unsuccessful.

The disclosures about Desronvil's legal troubles raise questions about the jury screening before Clancy's trial and could factor into the selection process if another jury is empaneled; the first trial ended in a deadlock after seven days of deliberations, with Desronvil being the only holdout against an acquittal based on insanity. A mistrial was declared Sept. 4 after six weeks of trial.

Plymouth District Attorney Timothy Cruz declined to comment Monday on the jury selection process, according to a spokesperson. He has yet to say whether he will

seek to re-try Clancy on first-degree murder charges, which would require another jury empanelment. If he reduces the charges to second-degree murder, Clancy could waive her right to a jury trial and let a judge decide.

Judge William F. Sullivan has scheduled a hearing Sept. 29 to set a trial date.

One of the jurors, Paula Devlin, told the Globe that she didn't believe Desronvil should have been allowed to sit on the Clancy jury, given the active restraining order. "People make mistakes in their life, but I think something that's pending

Key call looms for Fed chief, board

New chair Warsh faces pressure from Trump to not hike rates despite inflation

By Jim Puzzanghera
GLOBE STAFF

WASHINGTON — The moment of truth has arrived for new Federal Reserve chair Kevin Warsh: Will he hike interest rates to tackle rising prices, or hold off to try to please the person who appointed him?

After months of unprecedented pressure on the Fed to lower interest rates, President Trump tapped Warsh at the beginning of this year to replace Jerome Powell, who would not comply with Trump's wishes.

Warsh had been publicly supportive of lower rates, but he took office in May vowing to be independent, as the job requires.

Recently, after higher prices caused by the Iran war triggered an inflation jump, Warsh has been vocal about getting it under control. Now it's decision time.

The Fed's monetary policy committee kicks off a two-day meeting Tuesday and will announce its interest rate decision on Wednesday afternoon amid high expectations from investors of the first hike in more than three years.

Kevin Hassett, a top White House economic official, has been clear in public comments recently that is not Trump's preference, particularly

Victims detail harrowing attack as Vt. trial opens

'I heard some gunshots and I was on the ground.'

By Paul Heintz
GLOBE STAFF

BURLINGTON, Vt. — As he strolled down a street here on a chilly autumn evening, Tahseen Aliahmad turned to face his childhood friend, Hisham Awartani, conversing in a mix of Arabic and English. When he looked forward again, he saw something surprising: a man pointing a handgun at them.

"I heard some gunshots and I was on the ground," Aliahmad said in Chittenden Superior Court Monday.

He tried to get up but realized he'd been shot in the chest — and that the gunman might still be lurking nearby — so he lay back down beside his friend. "I was playing dead," he said.

Aliahmad's harrowing testimony came at the start of a weeklong trial for the man charged with firing those shots: Jason Eaton, 51, of Burlington. Eaton faces three counts of attempted second-degree murder in the November 2023 shootings of Aliahmad, Awartani, and a third friend, Kinnan Abdalhamid, who had been walking just behind them in the residential neighborhood.

UMass initiative seeks to have us rethink how we produce food

By Brooke Hauser
GLOBE STAFF

AMHERST Greater Boston is considered the vanguard of biotech, but what if Western Mass. could forge a similar frontier for food? That's what the University of Massachusetts Amherst is banking on with its just-launched, \$120 million Future of Food initiative.

The name might conjure up images of push-button meals and food pills à la "The Jetsons." But with a global population that's projected to hit nearly 10 billion by 2050, the future of food is all about access — and

Lucy Stevens and Winston McGregor (top) loaded a van with produce in a school field in Amherst. Among the produce were radishes.

with climate change threatening natural resources including soil and water, access depends on sustainability.

Now, UMass Amherst is leading the charge to bring together everyone from farmers to food scientists to solve problems facing our global food system. The transformational investment will establish a 36,000-square-foot research facility, a collaborative research center, and an endowed chair in food science, among other positions. It comes in four \$30 million tranches: from the family foundation of private donors Paul

L.L. Bean starts winding trek to \$2b goal

Retailer bets on new stores, new customers, and a huge renovation

By Alexa Gagosz
GLOBE STAFF

FREEPORT, Maine — For more than a century, L.L. Bean's flagship store has been a shrine to New England outdoorsmanship: a 24/7 place to buy its iconic American-made duck boots, wander through the company's sprawling collection of gear — and for many generations of families, make a pilgrimage to a favorite brand's birthplace.

Now L.L. Bean has rebuilt its flagship entirely.

The company is officially reopening the store this weekend after a nearly two-year closure and a \$50 million overhaul, its biggest investment yet in the home of a brand it's protected fiercely for generations.

Trump plan to screen mail-in ballots gets blocked

Supreme Court warned it may cause early voting chaos

By Abbie VanSickle
NEW YORK TIMES

WASHINGTON — The Supreme Court on Monday blocked a Trump administration plan to dramatically change how Americans vote by mail in the lead-up to the midterm elections, a major loss for President Trump, who has long claimed without evidence that fraud is rampant in mail voting.

The ruling was a resounding win for Democratic-led states and voting rights groups, which had argued that the plan was unconstitutional and an existential threat to the democratic process.

The Trump administration's efforts, they had said, would introduce chaos and confusion as early voting gears up in many states.

Still, the weekslong legal tussle over the issue may have sown its own kind of confusion, a victory of sorts for Trump as he seeks to cast doubt on the integrity of the vote in an election his party might lose.

In a one-paragraph explanation, the court's majority wrote that the government was "un-

likely to succeed on the merits" at the conclusion of additional litigation on the issue.

The majority's order was unsigned, which is typical in emergency rulings. It gave no vote count.

Justice Brett Kavanaugh, one of the court's conservatives, wrote a one-paragraph concurrence. Writing for himself alone, he said that there was "at least a fair prospect" that new mail ballot rules issued by the US Postal Service fell within its purview under federal statutes, but that allowing those changes so close to the midterms "would be arbitrary and capricious." State and local elections officials, he wrote, would not have "sufficient time to reasonably implement" the changes.

In an eight-page dissent, Justice Samuel Alito, joined by Justice Clarence Thomas, wrote that he would have allowed the Trump administration plan to go into effect for the midterms. Alito called the legal challenge a "Hail Mary" pass that was unlikely to succeed and that he believed the administration would

ultimately win the case because the Postal Service has "broad authority to regulate the mail."

"Today is a good day for democracy, the rule of law, and the American people looking to exercise their Constitutional right to vote," said California Governor Gavin Newsom, one of the Democratic-led states that challenged the Trump administration's plan. "Finally, 50 days out, and the American people have certainty when it comes to our country's electoral process: Voting is safe, vote-by-mail is accessible to any and all who need it."

The American Civil Liberties Union, which represented voting rights organizations in the case, celebrated the court's decision.

"The president does not run our elections, the Postal Service does not get to decide whose ballot counts, and voters — not the White House — will decide November's elections," Sophia Lin Lakin, director of the ACLU's Voting Rights Project, said in a statement.

Even some Republican election officials cheered the ruling. Ricky Hatch, the Republican

ALISHA JUCEVIC/NEW YORK TIMES

The battle over the Trump administration's plan to change mail-in voting has played out over the last few weeks.

clerk in Weber County, Utah, said he felt "relief." Utah almost exclusively votes by mail, and Hatch had been preparing a contingency plan to abandon mail voting if the Supreme Court allowed the Postal Service to restrict the practice.

The battle over the Trump administration's plan to change mail-in voting has played out over the past few weeks in a dizzying series of legal developments, even as states began

sending out ballots.

Trump administration lawyers had urged the justices to step in and clear the way for its plan to use the Postal Service to screen ballot envelopes after they are submitted by state elections officials. The new rules have required states to submit lists of voters approved to receive mail ballots. The Postal Service would then have delivered mail ballots only to the voters on the lists.

The plan would also have re-

quired states to use an envelope approved by the Postal Service, including a unique bar code for each voter. Some states have argued that redesigning ballots so close to the election would have been challenging or perhaps impossible, causing delays.

The Trump administration described the changes in court filings as "only modest envelope-design and addressee-information requirements" that fell within the Postal Service's mandate under federal law.

But the Democratic-led states and voting rights groups challenging the plan had urged the justices to block it, arguing that changing the Postal Service requirements so close to the election threatened to cause "catastrophic harms," leading to mass confusion and "a significant risk that millions more voters would be denied the ability to vote."

The challengers also asserted that in some states, it would be "impossible" to comply with the new Postal Service rules in time for the midterm elections, including in states such as Alabama, Delaware, and North Carolina, which have already mailed ballots to voters.

COASTAL EROSION — A Pacific Ocean wave washed up near contractors working to protect a damaged beachfront home on Monday, in Dana Point, Calif. Heavy surf from offshore Hurricane Marie over Labor Day weekend left approximately 10 properties in the area uninhabitable.

Suit alleges Columbia failed activists

Palestinian activist Mahmoud Khalil sued Columbia University on Monday, alleging it failed to address harassment against him and other members of a pro-Palestinian campus group and retaliated against them when they reported it.

The university's "deliberate indifference" led to the doxing of multiple group members and Khalil's detention by immigration agents, according to the civil rights lawsuit filed in federal court in New York City.

Khalil accused the university of "discrimination aimed at intimidating Palestinian students."

"We are suing because no student, regardless of their background, should go through

the hell that Columbia put us through over all these years," he said.

The university declined to comment on the lawsuit but said in an email that "creating a campus environment where every member of our community feels welcome, supported, and safe is fundamental to who we are as a University."

"Columbia is committed to protecting our community from discrimination and harassment, and responding promptly and appropriately when concerns arise," it said.

Khalil also sued Columbia last year to block the release of student records to a congressional committee.

Trump: AI only needs smart president

WASHINGTON — President Trump on Monday rejected calls from leading artificial intelligence executives for new limits on the technology, writing on social media that the industry already has the only guardrail it needs: "a STRONG AND SMART (High IQ!) PRESIDENT!"

Trump inserted himself into the intensifying national debate over how to handle a rapidly evolving technology that researchers and industry leaders say poses major risks like mass unemployment, a new wave of biological weapons and autonomous warfare. The president did not address those risks directly. Instead, he questioned the sincerity of the executives who have been calling to slow the technol-

ogy's development.

"The only control or 'guardrails' that AI needs is a STRONG AND SMART (High IQ!) PRESIDENT, and the U.S.A. has that, in spades!" Trump posted. "The Trump Administration has stopped AI 'people' from doing bad, or potentially bad, 'things,' like Dario (Anthropic!), who is now pretending to be a 'perfect little angel' — and we will continue to do so!"

"We already have tremendous CRIMINAL and REGULATORY power over these companies!" he added.

It was not clear what authority Trump was referring to, or what actions he believes his administration has blocked.

NEW YORK TIMES

Texas landowners ask a court to stop Trump's Big Bend wall plans

MARFA, Texas — Landowners, ranchers, and business owners in the Big Bend region of Texas, along with a nonprofit organization dedicated to protecting the region's landscape and heritage, are suing to stop the Trump administration's plans to build a wall and other border infrastructure through the remote section of the state.

The lawsuit, filed by Conserve Big Bend and six landowners and with the support of dozens more people along the border, comes as the administration is ramping up a \$46 billion effort to line the roughly 2,000-mile southern border with a collection

of 30-foot steel bollard walls, vehicle barriers, and technology intended to keep out smugglers and migrants.

In Texas, the effort has run up against numerous lawsuits and bipartisan opposition from sheriffs, elected officials, tour guides, environmental groups, and landowners.

Officials backing the wall "were woefully unprepared for the hornet's nest they stirred up because they had no idea how much we love this place," said David Keller, an archaeologist and historian who specializes in the Big Bend and lives there.

EPA halts carbon emission rules on power plants

Move erases climate policies of Obama, Biden

By Maxine Joselow
and Lisa Friedman
NEW YORK TIMES

WASHINGTON — The United States will no longer limit the planet-warming pollution that power plants pump into the air while burning coal and gas, the Trump administration announced Monday.

The shift by the Environmental Protection Agency completed the administration's erasure of the most consequential climate policies of Presidents Biden and Obama. If the move survives expected legal challenges, it could also prevent future administrations from regulating greenhouse gas emissions from power plants.

The power sector is the second-largest source of carbon dioxide and other greenhouse gases in the United States. This pollution accumulates in the atmosphere, where it traps the sun's heat, raising temperatures and supercharging extreme weather events around the globe. Scientists say the United States and other industrialized nations must sharply cut emissions to avoid the most devastating impacts of climate change.

EPA Administrator Lee Zeldin announced the change during a meeting of energy ministers from the Group of 20 nations in Houston. He accused the Obama and Biden administrations of waging a "war on coal" and suggested that the Trump administration would roll back even more restrictions on fossil fuels.

"This is just the beginning," Zeldin said in a statement. "We are working to go even further so that American energy can be fully unleashed."

Environmentalists and energy experts criticized the move, which has been in the works since last spring. They noted that if the US power sector were its own country, it would be the fifth-largest climate polluter in the world after China, the entire United States, India, and Russia.

"This is another nail in the coffin for this administration's commitment to protecting people and tackling the climate crisis," said Manish Bapna, the president of the Natural Resources Defense Council, an environmental group. The EPA, he said, "is ending its legal and moral responsibility to end climate pollution."

President Trump has derided climate change as a "hoax," and in his second term, the EPA has

systematically dismantled policies aimed at slowing global warming that have been criticized as costly by oil, gas, and coal companies. The administration has tried to make it easier and cheaper to produce and use fossil fuels, especially to generate electricity that can meet growing demand from artificial intelligence data centers.

Earlier this year, the EPA eliminated greenhouse gas standards for car tailpipes and eased restrictions on planet-warming chemicals used in air conditioners and refrigerators. Most consequentially, the agency repealed the scientific determination that gave it the legal authority to create climate regulations in the first place.

Under the plan announced Monday, power plants would still be subject to some limits on mercury, arsenic, and other contaminants, though the EPA has loosened restrictions on how much mercury they can emit.

The agency Monday took a two-pronged approach to abolishing the greenhouse gas limits for power plants. First, it rescinded a Biden-era rule that required coal plants to eliminate nearly all of their planet-warming pollution by 2039 or shut down. Then it argued that greenhouse gases from power plants do not endanger human health or the environment, and therefore it lacks the legal authority to regulate these emissions under the Clean Air Act.

If courts uphold this novel argument, it could prevent future administrations from restoring the restrictions.

"They are swinging for the fences to try to prevent any administration from regulating one of the largest sources of emission for the United States," said Carrie Jenks, the executive director of the Environmental & Energy Law Program at Harvard Law School.

The Biden administration's climate rules for power plants, finalized in 2024, applied to coal-burning plants that were in operation and gas-burning plants that could be built in the future. To comply, coal plants could have installed technology to trap carbon emissions before they are released into the air and store them deep underground. Gas plants could have operated on cleaner fuels such as hydrogen, which produces no planet-warming emissions when burned.

The Biden administration estimated that the regulation would also prevent other pollutants, such as soot, from escaping into the air, resulting in \$120 billion in public health benefits by 2047.

GRIEF OVER DEATHS — A woman reacted Monday while attending a funeral ceremony for schoolchildren who died in a fire last week that swept through two schools in the city of Bukavu, in eastern Democratic Republic of Congo. Close to 30 children reportedly were killed. Authorities say the cause of the fire remains unknown.

Russia strikes train station near Poland

Attack seen as warning to Ukraine’s allies

By Jeanna Smialek and Lara Jakes
NEW YORK TIMES

Ukraine’s rail network is a link to the West. With airspace over the country closed, its trains crawl toward the border day and night, ferrying officials and dignitaries such as Jared Kushner, along with ordinary people, to and from the Ukrainian capital, Kyiv. The railway is a lifeline, and a potent symbol of support.

European officials say Russia’s weekend strike on a station near Ukraine and Poland’s border, which hit perilously close to departing foreign visitors, including former CIA director David Petraeus, was an attack not just on Ukrainian infrastructure, but also on those ties.

Russia is attacking trains using increasingly sophisticated weapons that Ukraine is struggling to match. On Monday, Kremlin spokesperson Dmitry Peskov did not deny the strike on the route that Ukrainians called the “Peace Express” when

it carried Trump administration envoys to Kyiv last week. “Our military is carrying out its tasks across the entire territory of Ukraine — they are continuing to do so,” Peskov said.

But European leaders said the attack was part of an escalating Russian campaign to create confusion and to weaken the Western alliance at a particularly dangerous moment for Ukraine.

“It is clearly meant to scare Western countries from supporting Ukraine, from going to Ukraine to show support,” Kaja Kallas, the European Union’s top diplomat, said Monday. “The question for us is, ‘What do we take from that message?’”

Governments and researchers have accused Russia in recent years of sabotage and of hybrid attacks aimed at Ukraine’s allies. A drone containing an explosive device was found in the freight terminal of an airport in Leipzig, eastern Germany, last month, an incident that Berlin blamed Moscow for. Misinformation and election interference by Russia have become common. So has GPS jamming, which can disrupt communication and navigation.

The timing of the attack was

UKRAINIAN STATE EMERGENCY SERVICE/AFP VIA GETTY IMAGES

Ukrainian firefighters extinguished a blaze at the train station near the border with Poland hit by a drone strike.

notable. The drone strike hit a train near one ridden by Petraeus and came shortly after the departure of another, which was carrying former British prime minister Boris Johnson and other European politicians and diplomats.

NATO Secretary General Mark Rutte said the strike had shown “desperation” on the part of Russian President Vladimir Putin. NATO would respond, Rutte said, by doubling down on support for Ukraine.

Philip Bednarczyk, the Warsaw office director at the Ger-

man Marshall Fund, a research institute, said Russia’s attacks served to test “over and over again” whether NATO allies were committed to defending one another.

Bednarczyk pointed out that while incidents so far had been isolated, many in Poland were bracing for further escalation this winter, perhaps even into something coordinated. Bednarczyk said he already knew friends who had begun to avoid taking the train into Kyiv from Warsaw, opting to drive instead. Polish Prime Minister Don-

ald Tusk said Russia’s escalation was “becoming a reality” and that he would review plans to protect his country’s railways and industries.

He added that the most recent strikes showed that Russia was more willing than ever to deploy longer-range, high-precision, jet-powered drones to threaten NATO.

“We do not want to give in to nervousness — emotions are the last thing needed here,” Tusk said. “But there is no doubt that we, together with our allies, must be prepared for a joint response should the need arise.”

In Kyiv, the chief executive of the national Ukraine Railways said Russia was overwhelming trains with recently developed drones that can carry hundreds of pounds of explosives when crashing into targets.

“I understand we cross so many red lines in this war, but how in the world can hitting a passenger train be even accepted as something that is not immediately seen as a war crime?” the executive, Oleksandr Pertsovskiy, said in an interview. “A passenger train is not different from a passenger airplane, especially in the country that has no airspace open.”

Saudi pipeline hit by drones will be down for weeks

Oil prices rise amid fears about global supplies

By Samy Magdy
ASSOCIATED PRESS

CAIRO — A crucial Saudi oil pipeline that was struck in an attack will be mostly out of service for weeks as the damage is repaired, two regional officials said Monday, as Yemen’s Houthi rebels seized more islands along Red Sea shipping routes in a new blow to Saudi Arabia’s oil exports.

Oil prices gained more than 2 percent amid growing worries about global petroleum supplies and the effect of the new developments on the ability of the world’s biggest exporter to get its crude to market. The Iran war has forced the kingdom to shift its exports away from the Persian Gulf, since Iranian attacks have stifled shipping through the gulf’s sole exit, the Strait of Hormuz.

So the kingdom has relied on the East-West Pipeline, which runs 1,200 kilometers (745 miles) across the breadth of the country, to move its crude production from Gulf reports to the port of Yanbu on the Red Sea. From there it can

be put on tankers for export. But authorities were forced to shut down the pipeline after an attack Thursday that Saudi Arabia blamed on drones from Iranian-backed militias in Iraq.

Repairing the damage, including at a major pumping facility, could take three to five weeks, the officials, who have been briefed on the matter, told the Associated Press. The pipeline may work partially during the repairs, one of the officials said, but they could not say how much oil might get through.

The officials spoke on condition of anonymity because they weren’t authorized to brief the media.

The pipeline has been moving a weekly average of 2.6 million to 4 million barrels per day since late August — a quantity that will be lost to the market if the pipeline’s flow stops completely, according to an analysis issued Monday by Rystad Energy, a Norway-based research firm. It said the jump in prices for Brent crude, which reached \$109, “is a clear signal that the market is increasingly pricing in a significant loss of supply.”

The Saudi oil company Aramco, which operates the pipeline, didn’t immediately respond to a request for comment. The government-run

For kingdom, a ‘worst-case scenario’

By Vivian Nereim
NEW YORK TIMES

RIYADH, Saudi Arabia — Saudi Arabia has increasingly found itself caught in the middle of the war between the United States and Iran. Now, the kingdom’s leadership is assessing dwindling options on how to respond.

In recent weeks, the Iran-allied Houthi militia in Yemen has repeatedly attacked the

Center for International Communication, which oversees foreign media in the kingdom, said it was looking into an AP inquiry about how long it will take to repair the pipeline.

Meanwhile, Yemen’s Iranian-backed Houthi rebels continued to expand their threat to Saudi shipping routes out of the Red Sea by capturing the strategic islands of Greater and Lesser Hanish, government and Houthi officials said Monday.

The islands lie 100 miles north of the Bab el-Mandeb Strait. The strait is a choke point that connects the Red Sea

to the open ocean and Saudi Arabia’s key Asian markets.

The Houthis’ advance also puts them just 20 miles from the US military base in the tiny Horn of Africa nation of Djibouti, on the other side of the Bab el-Mandeb Strait.

For more than a month, the Houthis have been striking Saudi oil infrastructure and shipping in the Red Sea, stepping up pressure on global oil prices and boosting Iran’s leverage in its war with the United States.

The Houthi advances have seemed to come with little resistance from Saudi-backed Yeme-

ni government forces. The rebels deployed on the Hanish islands after hundreds of government-allied forces withdrew from the archipelago, according to two government officials and a Houthi official. The officials spoke on condition of anonymity because they were not authorized to talk to journalists.

Last week, the rebels seized the port city of Mokha and the island of Mayun, inside the Bab el-Mandeb Strait.

Government forces are now attempting to rally and fight back.

DAILY BRIEFING

Wales, Scotland, and Northern Ireland sign pact

LONDON — The leaders of Wales, Scotland, and Northern Ireland signed a pact Monday that threatens to lead to the breakup of the United Kingdom.

The first ministers of the three semiautonomous regions of the UK told Prime Minister Andy Burnham and his government to prepare for constitutional change and that their future lies with the European Union.

“For people watching across these islands — for people watching around the world — there could be no clearer sign that Westminster’s time is coming to an end,” they said in a memorandum of understanding, referring to Parliament.

The announcement came about 48 hours after President Trump waded into the waters of the politically contentious issue when he said he would “love to see” a reunified Ireland during a trip to visit his golf course hosting the Irish Open.

It’s the first time the leaders of all three countries are either from pro-independence parties, or pro-unification in the case of Northern Ireland, which was partitioned and remained part of the UK when Ireland won independence from Britain.

China’s spy chief warns AI a threat to party rule

China’s top spy chief has warned that artificial intelligence could pose a direct threat to the Chinese Communist Party’s hold on power, in what is the highest-level and most detailed articulation yet of how Beijing sees the technology’s security risks.

The unusually blunt assessment by Chen Yixin, the head of China’s Ministry of State Security, is in contrast to the warnings dominating the AI debate in the United States, which have focused on the possibility that AI could slip out of human control or pose a threat to humanity itself.

In an article published Sunday in the state-run magazine China Cyberspace, Chen called for more party control over AI and stricter government oversight. This, he said, was necessary to protect political stability at home; to defend against increasingly sophisticated cyberattacks and misinformation campaigns from “hostile forces”; and to compete militarily with countries like the United States.

NEW YORK TIMES

Sweden may wait long time for a new government

STOCKHOLM — Sweden may face a long wait for a new government as preliminary election results on Monday showed a thin and still-uncertain lead for the left-leaning opposition, while a hard-right anti-immigration party saw its support slip.

With nearly 95 percent of districts counted, the Swedish Election Authority reported that the four opposition parties were heading for 176 seats in the 349-seat parliament in Stockholm, the Riksdag, with 173 seats going to the four parties that make up or support the outgoing conservative-led government.

But the outcome may not be clear until early votes, including overseas ballots, which didn’t make it to polling stations by Election Day, are counted on Wednesday.

It could be much longer until it’s clear who will run NATO’s newest member for the next four years. Sweden, a country of about 10.6 million inhabitants, is also a member of the European Union.

Moscow’s digital utopia stirs debate

Infrastructure doubling as a surveillance trap

By Ivan Nechepurenko
NEW YORK TIMES

MOSCOW — On the surface, today’s Moscow is a technological wonderland. You can use your face to pay for almost anything, like subway fares, or even to finalize the purchase of an apartment. Robots scurry across sidewalks making 15-minute grocery deliveries, and driverless taxis are set to begin commercial service this year.

Underpinning many of the modern amenities is a robust digital infrastructure developed by the city government that has made life not only easier, but also safer. Policing aided by digital tools has helped cement Moscow’s transformation from the raw, unforgiving place it was 25 years ago, plagued by home burglaries, street muggings, and murders.

But there is a cost to the convenience and security: an expanding surveillance state.

Moscow’s roughly 300,000 CCTV cameras make it one of the most heavily watched cities in the world. It is impossible to avoid a lens while simply walking through the city. The same cameras that whisk subway passengers through turnstiles are also used to monitor and flag people.

In April, a Russian rock musician was detained by police at a railway terminal in St. Petersburg after surveillance cameras mistook him for a similar-looking Ukrainian public figure wanted by the state. After checking his face and pulling at his hair to ensure it was not a wig, they let him go.

The CCTV network is linked to biometric databases. Submission of biometric data is voluntary in Russia, but it is encouraged in widespread advertisements, and citizens cannot take full advantage of digital services without complying.

These databases help authorities target political dissent in addition to crime. Biometric feeds can be used to hunt down critics of the government after they hold gatherings. The days when outspoken Russians could flee to

remote towns to avoid authorities, as they did during Josef Stalin’s purges, are largely over.

As of July, around 10 million Russians were using biometrics-driven applications in some form, and the Kremlin wants to increase that number, pushing citizens to adopt the tools for identification not only at train stations, but also at airports. This year, Moscow City Hall announced that a biometric system would recognize passengers on buses and trams, automatically deducting their fare once they confirmed the transaction in an app.

Other major European cities also have large CCTV networks, most notably London. Moscow’s, however, is more centralized and uses biometrics to identify people spotted by cameras with fewer restrictions.

With Russia’s war in Ukraine, the stakes behind the growing surveillance have become higher.

Rumors of a new wave of military conscription, the first major mobilization since the early months of the war, have swept through Russia. While in the recent past it was relatively simple

to evade a draft because enlistment offices were buried under paper files, artificial intelligence-enhanced digitized systems make that almost impossible now. Authorities introduced electronic summonses that carry the full legal weight of paper notices after thousands of Russians fled the draft in 2022.

In March, Vlad, 28, an art and fashion photographer, received a summons to appear at a military enlistment office for a mandatory medical examination. Through the State Services app — a centralized portal for government services, medical care and identity verification — he learned that he had been barred from leaving the country until he complied.

Vlad, who asked that his last name be withheld for fear of repercussions, said he now lived “in fear” as he defied the summons, which he believes could be a prelude to being sent off to war.

“There is total control because you give up so much data that your every step can be traced,” he said. He has stopped using the subway, terrified of the cameras.

McConnell returns to Senate after absence

WASHINGTON — Senator Mitch McConnell returned to the Senate on Monday for the first time in more than three months, ending an absence that had fueled questions about his medical condition and ability to continue serving after a health incident at his home in mid-June.

McConnell, the 84-year-old Kentucky Republican and former party leader, arrived in a wheelchair for the Senate’s evening vote on a federal appeals court nominee, the first time he had been seen there since he last cast a floor vote on June 11.

McConnell’s office has said he suffered a fall at his Capitol Hill home on June 14 and was transported by ambulance to George Washington University Hospital, where he was treated and underwent rehabilitation before his release and return home on Aug. 6. His office had released photographs of the senator and issued statements in his name, but before Monday evening, he had not been seen publicly since he entered the hospital.

On the Senate floor Monday, McConnell was wheeled out and immediately surrounded by a procession of senators who approached to shake his hand. Clad in a navy blazer, tie, and khaki pants, he could be heard speaking in characteristically low tones with both Democrats and Republicans who came to wish him well.

He wore a bandage just above his wrist on one hand, and both hands appeared darkly bruised on top. He shook hands, steepled his fingers while in conversation, and clapped a few senators on the chest.

Speaking briefly to reporters outside the Senate chamber, Mc-

FINN GOMEZ/GETTY IMAGES

Senator McConnell returned to the US Capitol for a vote on Monday after three months away on medical leave.

Connell said he was committed to working on the farm bill and legislation to impose strong new sanctions on Russia.

NEW YORK TIMES

Kennedy Center board has new options to honor Trump

The Kennedy Center Board of Trustees is planning to propose adding President Trump’s name to the facility’s exterior in recognition of his saving the building from its “precarious fiscal position,” according to a new court filing in a suit aimed at blocking the move.

It’s the latest development in the case revolving around adding the president’s name to the exterior of the cultural and arts facility that sits along the Potomac River in Washington and reflects the Trump-aligned board’s efforts to honor the president.

The new information came out of a court filing made by Democratic Representative Joyce Beatty of Ohio, an ex-officio member of the board. Beatty, who has led an effort to block Trump from putting his name on the building, said in a filing she was alerting the court to the

proposal because it could implicate a pending decision before the court.

Both the court and the Kennedy Center board are expected to hold meetings Tuesday.

Trump Jr.’s wedding partly paid for by Russian oligarch

NEW YORK — Donald Trump Jr.’s new wife, Bettina, is confirming that her May wedding weekend celebration was partially funded by a man with close ties to Russian President Vladimir Putin.

In a post on her Instagram page Monday morning signed by the couple, Bettina Trump wrote that the man, Umar Kremlev, was a “dear friend,” who “very generously hosted two incredible nights of celebrations for us AFTER our wedding.”

ProPublica, a nonprofit investigative website, reported earlier Monday that the wedding between Trump Jr. and socialite Bettina Anderson in the Bahamas was heavily funded by Kremlev, a Russian oligarch who heads the International Boxing Association. ProPublica reported that Kremlev “footed the bill

for hundreds of thousands of dollars of wedding expenses,” including paying to rent out one of two private islands where the three-day party was held and a fireworks show.

Trump Jr. has previously been scrutinized over his Russian ties. During the 2016 campaign, his meeting with Russian attorney Natalia Veselnitskaya in Trump Tower was the subject of intense scrutiny by federal and congressional investigators probing whether the Trump campaign coordinated with Russia to meddle in the election.

ASSOCIATED PRESS

‘Alligator Alcatraz’ used cages as ‘calming areas’

WASHINGTON — A state-run immigration detention center in the Florida Everglades failed to comply with a host of federal detention standards, creating cramped conditions and confining migrants in “small metal enclosures,” according to a new report by the Department of Homeland Security’s independent watchdog.

The report said the use of the enclosures was unprecedented among facilities the watchdog, the department’s Office of Inspector General, had previously inspected and presented “significant risks” to detainees’ health and safety. It focused on a high-profile facility known as Alligator Alcatraz, which came under intense scrutiny before it closed this summer.

The report raised further questions about a facility that became synonymous with the Trump administration’s harsh treatment of immigration detainees. President Trump had joked that the location was in such a remote area that detainees would have to learn “how to run away from an alligator.”

As climate goals falter, nations brace for risks

Global warming to eclipse target limit, UN says

By Chico Harlan
NEW YORK TIMES

The most ambitious part of the 2015 Paris climate agreement, to limit global warming to 1.5 degrees Celsius, only came about because of a campaign by some of the world’s poorest and most defenseless countries.

Caribbean participants tacked up posters saying “1.5 to stay alive,” and the prime minister of Tuvalu said any temperature rise beyond that mark would “spell the total demise” of his and other low-lying island nations. In the final stage of negotiations, some were chanting, “1.5.”

The acknowledgment last week from the United Nations that the planet is going to breach that limit was not a surprise to anyone tracking global temperatures, which keep rising.

But it nonetheless formalized a dire outcome: Amid scant progress from global powers to cut pollution from fossil fuels, vulnerable countries will now spend decades, or perhaps centuries, confronting the very climate scenario they’d once said would be untenable.

And though that puts them face to face with the concerns they’d held in Paris, they also face new risks few could have imagined a decade ago. Cutbacks in aid from wealthy nations have reduced the humanitarian safety net. The United States, the world’s largest historical emitter, has also withdrawn from the Paris Agreement, and from funds meant to help developing countries deal with climate change.

Poorer nations say these changes threaten to make the 1.5 Celsius breach even rockier, leaving them fewer resources to deal with disasters while widening global inequities.

“We risk creating a world in which climate change continually pushes poorer countries backward,” said Mohamed Adow, the director of the Nairobi-based climate and energy think tank

Power Shift. “This is precisely why vulnerable countries fought for 1.5 Celsius. They understood that climate risk is not distributed equally.”

The fault line between wealthy, industrialized nations and poor, developing nations has long been a defining feature of international climate talks. But the UN report on the “overshoot” of 1.5 Celsius, issued on Sept. 2, figures to create extra tensions when countries meet for the annual climate summit, set this year in November in Antalya, Turkey.

A negotiating bloc representing 44 nations known as the Least Developed Countries this month raised the idea of a tribunal to assess potential climate “reparations.” That term has long been a nonstarter with wealthier, polluting nations that would be on the hook.

Those least-developed countries said that overshooting the target of 1.5 degrees Celsius, or 2.7 degrees Fahrenheit, means “mounting irreversible loss and damage.”

Temperatures could theoretically be brought down if carbon dioxide could be pulled out of the atmosphere on a huge scale. The Alliance of Small Island States, another negotiating coalition, said the 1.5 degree goal shouldn’t be abandoned, and that governments should try to minimize overshoot “and return global temperatures to below 1.5 degrees Celsius as rapidly as possible.”

In part because of how leaders talked about existential risks in Paris, one image looms largest in the public imagination: the notion of rising seas rendering island nations uninhabitable. But the problems go well beyond that, involving both sudden disasters, like the glacial collapse in Nepal last month, and slower-burning events often escaping attention.

“There will be lives that are lost,” said James Fletcher, a negotiator from Saint Lucia who helped lead a committee in Paris on the 1.5 Celsius target. “We had an opportunity to make sure we would not get to this point, and we still let it happen.”

Immigrants’ lawyers say US redacting papers

Documents would prove legal status

By Minh Kim
NEW YORK TIMES

WASHINGTON — Immigrants seeking documents from the government to prove that they are in the country legally are being rebuffed or provided paperwork that is heavily redacted, according to dozens of immigration lawyers, who say the refusals put their clients at risk of deportation.

In the past, federal agencies routinely turned over documents immigrants requested. These records requests, filed by hundreds of thousands of immigrants each year, are often the only way for them to secure documents that detail their full immigration history.

But the Trump administration has been redacting and withholding documents at a strikingly high rate, according to nearly three dozen immigration lawyers interviewed by The New York Times. The government has sometimes asserted that it could not find documents that immigrants and their lawyers know exist. In other cases, officials have provided documents, but critical information is struck out, the lawyers said.

“Delays and redactions pile on to the many other intentional ways immigrants are being deprived of due process in immigration court,” said Kelly Rojas, a lawyer who provides pro bono services at Amica Center for Immigrant Rights.

The experiences align with claims by Timothy Turner, a former senior official at US Citizenship and Immigration Services’ internal record-keeping office.

Turner alleged in a whistleblower complaint last year that the agency improperly enacted policies early in the second Trump administration to make it harder for immigrants to get documents to which they are legally entitled.

In his complaint to Congress, he said the agency in May 2025 ordered staff to withhold all documents in languages other than English. Staff were also told to hold back marriage certificates, joint bank statements, tax forms, portions of immigration court hearing transcripts, and other documents, citing privacy laws.

And the agency used discrepancies in names — for instance, if a person had a hyphenated last name in official records, but submitted only one of the two names in the document request — to deny requests, even if relevant records were located, he said.

Federal law entitles people to their immigration paperwork, which they may request under the Freedom of Information Act. A 2020 court order requires the government to respond within 30 business days.

The Justice Department, which oversees the immigration court system, declined to comment. The White House did not respond to the Times’ specific questions about the redactions and withholding of documents, but Lauren Bis, a spokesperson, said that “all illegal aliens receive full due process and have their claims heard.”

The government’s FOIA practice “is to hide the ball,” said Patricia M. Corrales, an immigration lawyer in the Los Angeles area who served as an ICE prosecutor. “If you hide the information from immigrants and you have lousy lawyers filing documentation for them, they’re going to be deported.”

Fed faces pressure to keep rates as inflation rises

►FED
Continued from Page A1

ly less than two months before the midterm elections.

But failure to hike interest rates now given the state of the economy could let inflation surge even higher, as well as deal a blow to the credibility of the Fed and Warsh himself, analysts said.

“It’s going to be kind of like the boy who cried wolf,” said Omair Sharif, founder and president of Inflation Insights, an economic advisory firm. “And I don’t think you want to be in that position in your first . . . four months as Fed chairman, where essentially the market just doesn’t believe you.”

In a major speech last month in Jackson Hole, Wyo., Warsh declared that “the Fed’s predominant focus right now should be on prices.”

Combined with a Labor Department report Friday of a significant 0.4 percent increase in the consumer price index in August, investors upped their expectation for a rate hike announcement this week.

A leading indicator based on futures trades on the Fed’s interest rate has jumped since Friday to a greater than 90 percent probability for a small, quarter-percentage-point interest rate hike.

The Fed changes its benchmark short-term rate to try to influence the economy, raising it to make borrowing more costly to try to tamp down prices and lowering it when the economy is struggling to spur more spending.

“I think it would be advisable to hike rates,” said Boston College economist Brian Bethune. “[Inflation] is not getting better. It seems to be actually getting worse.”

The Fed aims to keep annual inflation at about 2 percent. But post-COVID supply chain problems, federal pandemic relief spending, and the Ukraine war caused the annual consumer price index to vault to a four-

HAIYUN JIANG/NEW YORK TIMES/FILE 2026

President Trump talked with Kevin Warsh after he was sworn in as chairman of the Federal Reserve in May.

decade high of 9.1 percent in June 2022.

Under Powell, a Republican who Trump appointed as chair in 2017, the Fed was late to respond to that inflation surge, believing it was only temporary. But after jumping into the fight, the Fed aggressively raised interest rates and brought inflation down close to normal in early 2025.

Then Trump’s high tariffs pushed inflation in the other direction, and the Iran war this year added an extra boost by strangling oil exports from the Middle East.

Diesel fuel recently hit a record high, and gas prices in Massachusetts jumped 13 cents a gallon since last week.

On Monday, the average price in the state was \$4.34 cents, and about the same na-

tionally, according to AAA.

“It’s mainly fuel, gasoline, and that’s obviously spilling over more,” Bethune said. “It spills over directly into airline fares . . . and then eventually it will feed through to other costs in the economy.”

The annual consumer price index in August was 3.4 percent, and economists expect more upward pressure in September given the continued rise in gas prices.

But Hassett, director of the White House’s National Economic Council, has noted that core inflation — which excludes volatile energy and food prices — is running lower and said he doesn’t believe there’s a reason for the Fed to raise rates right now.

“The president will have an opinion about it, I’m sure,” Has-

sett said on Bloomberg TV on Friday. “He believes that there’s plenty of room for interest rates to go down and he voices that opinion while respecting the independence of the Fed. And so I would guess if the Fed makes a big move, that the president will have something to say about it.”

Democrats charge that Trump doesn’t respect the Fed’s independence, pointing to his extraordinary efforts to try to fire Fed Governor Lisa Cook, an appointee of President Biden, and to pressure Powell.

Massachusetts Senator Elizabeth Warren led the charge against Warsh’s nomination, saying he would be nothing more than a “sock puppet” doing Trump’s bidding. All but one Senate Democrat voted against his confirmation.

The Fed chair is only one of 12 voting members of the central’s bank rate-setting committee, but carries large sway.

Failure to support an interest rate hike this week would be a bad look for Warsh, Sharif said.

“One of the concerns about him in general was he said what he needed to say to get on the committee, and now he’s not hiking because he doesn’t want to upset the White House,” Sharif said.

“I just think it would look pretty bad for him professionally,” Sharif added.

Not increasing rates right now also could backfire.

If the Fed is viewed as acting politically and not in the best interests of the economy, investors would be likely to push up rates on their own, partly out of

Federal probe raises red flags

Whistleblower alleges state laws were broken

By Nick Corasaniti
and Hamed Aleaziz
NEW YORK TIMES

Investigators may have broken state laws under the direction of top Homeland Security leaders as part of an expansive effort to find noncitizens on the nation’s voter rolls, according to a federal whistleblower’s account released Monday.

The authorities also required agents to examine at least 40 voters each day, the account said, suggesting a rushed pace that raises questions about the thoroughness of the investigation. The effort has relied on questionable data, and has likely improperly flagged US citizens who are eligible to vote, the whistleblower said in a nearly 30-page report.

The whistleblower report, provided to Senators Chuck Schumer and Alex Padilla, both Democrats, offers an inside view of what the Department of Homeland Security is calling the “Unlawful Voter Initiative.” The New York Times revealed last month the existence of the operation, which has deployed hundreds of federal agents to scour voter rolls managed by the states in a widespread hunt for evidence of voter fraud. The investigation stems from President Trump’s longstanding fixation on noncitizen voting, despite decades of research showing the practice is vanishingly rare.

Democrats and voting rights activists have denounced the operation as yet another way Trump, who has acknowledged the headwinds Republicans are facing as they try to retain control of Congress, is trying to sow doubts about the legitimacy of US elections. They fear that eligible voters could be disqualified from participating in the fall midterms, or, worse, that Trump will use the investigation to try to discard actual results.

“This is just the latest exam-

ple of how far Donald Trump will go to interfere in our elections,” Schumer, the minority leader, said in an interview. He added: “We’ve never seen anything quite like this. They come up with so many different ways to try and steal the election, to try and jaundice the election, but we’ve never seen anything quite like this. Department of Homeland Security is actually pushing inflation in the other direction, and the Iran war this year added an extra boost by strangling oil exports from the Middle East.”

On Sunday, the senators sent a letter to Homeland Security Secretary Markwayne Mullin, demanding that the operation be halted and also seeking answers to a dozen specific questions. The senators included the full whistleblower account, which was produced by Democracy Defenders Fund, a nonprofit watchdog group founded in 2023.

In a statement, the Homeland Security Department broadly defended its hunt for election fraud: “Our message to aliens who vote in American elections is clear: We will find you, arrest you, and you will face the consequences — including criminal charges and deportation.”

The identity of the whistleblower is not known to the Times. Democracy Defenders Fund said in its report that the whistleblower requested anonymity because of “an extreme fear of retaliation but they feel an obligation to speak up about the misconduct and gross mismanagement they have witnessed.”

According to the whistleblower, agents are expected to complete at least 40 reviews in each eight-hour day, giving them scant time — about 12 minutes — to determine each voter’s citizenship and voting history. The consequence of the investigation is potentially vast, according to the account, because each review is recorded in a database that could affect individuals’ immigration status or legal permanent residency.

The whistleblower also ques-

tioned the legality of a crucial part of the operation, with investigators effectively posing as individual voters by using personally identifiable information compiled from both internal and external sources, such as birth dates or partial Social Security numbers, to look up voter records.

The agents plugged those names and personal data into public-facing state websites to find a subject’s voter history. Some states, such as Virginia, declare explicitly that only individual voters may use the search tool to look up their own records. Others, such as California, require specific information such as a driver’s license number or partial Social Security number in an effort to limit the use of the tool to individuals.

“I do think the American people value keeping their personal information private,” Padilla said. “The other thing that’s concerning here, that the American people who would be offended by, is the knowing inaccuracy of what they’re doing, whether it’s the data or their sham analysis. It’s going to produce false positives.”

Holdout Clancy juror had faced abuse allegation

► **JUROR**
Continued from Page A1

takes on a different meaning,” Devlin said Monday. “I think he should have been excluded.”

Devlin said jurors were asked about their criminal backgrounds.

Clancy’s attorney, Kevin Reddington, declined to comment Monday.

Though Desronvil could not be reached for comment, his brother Michel Desronvil told the Globe that he was qualified to serve. He said he did not know of the assault allegations against his brother.

“He’s never been violent to me,” Michel Desronvil said. “My view is that if they put him on the jury then he must be qualified to be there.”

Clancy, 36, admitted to strangling 5-year-old Cora, 3-year-old Dawson, and 8-month-old Callan with exercise bands in the basement of their Duxbury home on Jan. 24, 2023, but asserted she suffered a psychotic episode and couldn’t resist a man’s voice she hallucinated telling her to kill them and herself. Afterwards, she slashed her neck and wrists and jumped out a second-story window, leaving her paralyzed from the waist down.

Prosecutors allege the murders were premeditated by Clancy, who was deeply depressed and wanted to kill herself and take her children with her.

The details about Desronvil’s history only came to light publicly in recent days. Court documents first reported by NBC10

Boston reveal that when Desronvil was seated on Clancy’s jury on July 22, he was subject to a restraining order requiring him to stay away from his teenage nephew following an alleged assault a year earlier.

In August 2025, a Brockton District Court judge issued a restraining order against Desronvil after finding a “substantial likelihood of immediate danger of abuse” toward his nephew. The order commanded Desronvil to cease all contact, stay away from his nephew’s Bridgewater home, and surrender any firearms. It remained active through Aug. 11, 2026 — the third week of testimony in Clancy’s trial.

In an affidavit, the nephew wrote that Desronvil flew into a rage over a blocked parking spot, pushed him to the floor, and punched him twice in the face. Desronvil then blamed him for calling the police years earlier, shouting, “You [expletive] ruined my life,” before declaring, “You’ve had this coming your way for a long time,” and threatened to kill him, the affidavit says.

Desronvil had been arrested four years earlier in September 2021, when Brockton police held him on a domestic assault and battery charge after Desronvil’s then 13-year-old nephew made a brief, panicked 911 call from the family’s apartment in Brockton.

When police arrived at the apartment, according to court records, Desronvil was holding an infant on the porch and tried

to dismiss officers, telling them, “We don’t need any help, we are all set,” the report states.

But when police spoke with the nephew, the boy pointed at Desronvil and said, “He hit her.”

Through a translator, Desronvil’s then-wife told police that during an argument over their crying baby, Desronvil grabbed her by the throat and hurled her into a bedroom dresser, according to court records.

The couple divorced following the incident and the criminal charge was later dismissed, records show, so Desronvil was never convicted of any charges related to that incident.

But now, the Clancy case has drawn intense national attention, sparking a fierce debate that mirrors the split inside the Clancy jury room— with critics of the verdict vilifying the holdout juror as a pariah and many supporters hailing him as a hero.

The controversy has even spilled into the national political arena. On Friday, Florida Governor Ron DeSantis offered the holdout juror “asylum” in his state should he face harassment, accusing the media of orchestrating a smear campaign after reports exposed his past domestic violence charge and active restraining order.

The records show that, throughout the six-week murder trial, the juror was in the midst of his own legal troubles that go beyond the alleged assault.

His landlord has been trying to evict him for months due to

him owing thousands of dollars in unpaid rent, according to Housing Court records. The juror has not paid rent at his Bridgewater home since March, the landlord claimed in court records.

While weighing evidence in Plymouth in the Clancy trial, the juror missed his own court date in early August, the docket shows.

His landlord secured a judgment of more than \$12,600 as the jury deliberated, records show.

On Sept. 4, jury members announced they were still deadlocked, prompting the judge to declare a mistrial.

His landlord is proceeding with an eviction, according to records.

The Clancy trial was perhaps the most high-profile case the state has seen in recent years. Deliberations stretched over seven days before coming to the dramatic close of a mistrial.

The panel of nine women and three men signaled they were at an impasse four times. In an unsuccessful last-minute effort, Clancy’s attorney, Reddington, appealed to a single justice of the state’s highest court after Sullivan, the judge, refused to remove Desronvil. Jurors had expressed frustration that he refused to follow the judge’s instructions on reasonable doubt.

Reddington has since asked a judge to acquit Clancy before a possible retrial is held, records show.

Several jurors who weighed

her fate have also spoken out.

Five have said in news interviews the jury voted 11-1 to find Clancy not guilty based on a lack of criminal responsibility, accepting the defense’s claim she was suffering from postpartum psychosis at the time.

One juror, Nick Dargie, told ABC News the holdout, now identified as Desronvil, exhibited “disgusting” behavior during deliberations, appearing to act out one of the killings by using resistance bands on a water bottle, scrolling on his phone, and refusing to back up his objections to an acquittal.

What remains unclear is how thoroughly Desronvil was vetted. Confidential questionnaires ask potential jurors to disclose whether they or members of their household or family have ever been arrested, charged with a crime, or served with a court order.

The questionnaire warns that “willful misrepresentation or omission of a material fact” on the form is a crime punishable by a fine of up to \$2,000.

Legal experts said being prosecuted for a domestic violence offense doesn’t render potential jurors ineligible for jury service. But the prosecution or defense could ask a judge to dismiss the person or use one of their peremptory challenges to do so.

“I think most judges would have allowed a motion to strike him for cause given his background and how it might impact the deliberations,” said Daniel F. Conley, a lawyer at Mintz who

previously served as Suffolk district attorney.

Retired Superior Court judge Jack Lu pushed back against what he considers the unfair targeting of the lone holdout.

Lu noted that standard jury questionnaires are extremely short and can be confusing to non-lawyers, making it understandable for prospective jurors to inadvertently omit details. He stressed that a past civil order or dismissed criminal charge does not strip a citizen of their right to be a juror.

But David Rossman, a criminal law expert and professor emeritus at Boston University School of Law, said revelations about the juror’s legal past should bolster Clancy’s case against a second trial.

“There’s an argument to be made that the judge should have exercised more patience before declaring a mistrial, or should have disqualified the juror based on something that he would have learned if he had explored more about the juror’s behavior,” Rossman said. “You can’t get rid of [a juror] just because he’s got a crazy view of the evidence, but you can get rid of someone if the person wilfully ignores the definition of reasonable doubt.”

UMass initiative seeks to use cutting-edge tech in crop fields

► **FOOD**
Continued from Page A1

and Diane Manning, the state, UMass Amherst, and funds to be raised by the UMass Amherst Foundation.

In many ways, the project is an organic one for a campus known for its award-winning dining program, said UMass Amherst chancellor Javier A. Reyes. But it will also build on the university’s global brain trust across disciplines because, as he put it, food “touches everything.”

The state-backed initiative has implications for higher education and the workforce as well. As more Americans question the value of a college degree, UMass Amherst is viewing the Future of Food as both a career pathway and an economic driver for the region and beyond. Food is now a \$2.51 trillion industry nationwide, and Massachusetts has the largest food system in New England.

Researchers at the university are already growing edible protein from the air; creating healthier and tastier plant-based substitutes for meat, fish, milk, cheese, and eggs; and even printing 3D bacon with edible ink. They’re also figuring out ways to use food as medicine and fortify ultraprocessed foods with nutrients at a time when conversations about what we eat and where it comes from are unfolding on the national stage, thanks to Health Secretary Robert F. Kennedy Jr.’s rallying cry to “Make America Healthy Again.”

“I don’t agree with most things Kennedy says, but one thing I agree on is we need to reformulate the food system to make people healthier,” said David Julian McClements, a UMass Amherst food science professor who has consulted for Nestlé, Kraft, and Pepsi. Just as important is building sustainability since “food is a major contributor to greenhouse gases and other forms of pollution,” he added.

Grace Jungmann, a 21-year-old environmental science student, put it differently: “In this country, there’s a lot of exploitation. The aim is just to get more, more, more without thinking about the people who grow the food, or the earth that gives us the food, and that’s not sustainable in any sense of the word.”

UMass Amherst’s top-rated food science program was the first in the nation when it started in 1918 to help address critical food shortages during World War I. But food and agriculture have been part of the university’s DNA since its founding in 1863, when it was called the

PHOTOS BY LANE TURNER/GLOBE STAFF

Student farmers gathered eggplant in Amherst. Among a recent harvest were purple islander peppers (right). UMass Amherst, which already has a top-rated food science program, is launching a \$120 million initiative to bring together everyone from farmers to food scientists to solve problems facing the global food system.

Massachusetts Agricultural College, or Mass Aggie.

One of the country’s first land-grant colleges, it was established with the proceeds from sales of land granted to Massachusetts under the Morrill Land Grant Act, which allowed states to build public colleges focused on agriculture, among other studies.

UMass still has “an opportunity and a responsibility” to provide both education and research for the public good, said Lieutenant Governor Kim Driscoll.

“I think there’s a lot of good that will come both economically and from ensuring we can produce high-quality, sustainable food products,” Driscoll said. “Not just in Massachusetts but for the country, for the world.”

Today, the flagship operates several farms in the area, including the UMass Cold Spring Orchard Research and Education Center in Belchertown. Many local farmers maintain close ties. Kitchen Garden Farm, based in Sunderland and co-owned by UMass alumni, relies on the university for soil testing. Mapleline Farm, in Hadley, distributes its milk throughout the dining commons.

Clarkdale Fruit Farms, in Deerfield, invites UMass graduate students to do research using trees in its orchard. The tradition goes back half a century,

said owner Ben Clark, a fourth-generation apple farmer whose grandfather graduated from the Stockbridge School of Agriculture with a pomology degree. Over the years, researchers have set pyramid traps for pests like plum curculio and released pheromones to disrupt the mating habits of oriental fruit moths — yielding results the farm has adopted. “We’re reducing chemical use, which is one of our goals,” Clark said.

In addition to farmers, Western Massachusetts is also home to Big Y, a grocery chain in partnership with the Stockbridge

School, and many small-scale suppliers from craft brewers to cheese makers.

“We have identified food-related industries as a place where there are lots of jobs for our trainees,” said Mike Fox, dean of the College of Natural Sciences. A key piece of the food initiative is “growing a pipeline of talent and, hopefully, growing regional industries,” he added.

A recent report by the Western Massachusetts Economic Development Council identified food science as a sector where the Pioneer Valley is “well-positioned to compete,” noting “an

emerging food-tech cluster.”

The Holyoke-based Clean Crop Technologies, which developed a seed treatment that removes pathogens, is one of dozens of companies with roots at UMass Amherst.

Food science professor Lili He and her postdoctoral student Yuzhen Zhang work in a lab testing apple juice and rice products, including infant rice cereal, for arsenic. They also invented BactiSee, a smartphone-based technology that detects bacterial contamination on surfaces.

The professor said she wishes more designated collaboration spaces were on campus.

Enter the Paul and Diane Manning Food Innovation Hub, slated to break ground in late 2027, which will include sensory testing labs and research “collaboratories.”

The funding will also establish the Center for the Future of Food and invite stakeholders to cross-pollinate ideas about food and sustainability.

Students and faculty hold several visions for the initiative. At the Stockbridge School’s UMass Student Farm, many of the student farmers see the future of food as being inextricably linked to its past.

“If we want to feed this amount of people on the Earth for an extended period of time, we have to figure out ways we can heal the soil at the same time as growing food,” Jungmann said as she collected a tubful of eggplants.

Halvdan Hoegh, a senior from Norway, wants to see more data-driven, precision farming to maximize efficiency while protecting the land.

Winston McGregor’s dream is to see food deserts eliminated. Originally from Springfield and trained in social work, at 44 he is pursuing a second bachelor’s degree in sustainable food and farming because he feels he’s able to reach more people this way. “Out here,” he said, picking bell peppers, “you can save a whole city.”

As head of donations, McGregor takes whatever they don’t deliver to Big Y or CSA shareholders and gives it to the campus food pantry. Right now, that’s about 4,000 pounds of vegetables.

“That’s where my heart lies most,” he said, admiring the rainbow-hued harvest before loading it onto a truck. “Food is a human right, and everyone deserves access to it.”

AI needs regulation now

The world recently received a scary warning about the unchecked powers of artificial intelligence. We should be listening.

In July, OpenAI’s models broke out of their silos and hacked Hugging Face, an AI infrastructure company. The AI agents collaborated, cheated, and stole, then tried to cover their tracks. Essentially, the AI agents acted like a mob of humans with malicious intent.

The incident has sent shivers throughout the industry. Last week, a top safety researcher at Anthropic, the developer of the Claude chatbot, warned of a greater than 10 percent chance that AI “could kill all humans” within the next decade.

The reality is nobody knows what could happen and where all of this is going. The scenario causing sleepless nights has artificial intelligence morphing into a science fiction nightmare where AI bots launch a bioweapons attack or take over the world’s financial systems. A competing vision has AI as the hero, bots figuring out ways to cure cancer and helping solve climate change.

Given the wide range of uncertainties, and the truly terrifying worst-case scenarios, it’s imperative that we regulate AI more closely and slow things down to tip the scales toward the better outcomes.

More and more voices from Silicon Valley are calling for regulations to keep the industry in check. Nearly 1,400 computer scientists recently put out a memo calling for Washington to slow things down. This weekend, Dario Amodei, chief executive of Anthropic, released a 3,800-word essay calling for global safety standards. Even Elon Musk, an innovator known for throwing precaution to the wind and moving at a breakneck speeds, agreed.

Adequate regulation is unlikely to come from Washington. President Trump appears enthralled with AI and the unfettered growth that is goosing the stock market. He has also stressed the need to stay ahead of China. When Trump came back to office, his administration removed many AI safeguards, taking a hands-off approach and allowing the industry to grow unchecked. When a reporter asked the president last week if he had any fears of an existential risk posed by AI, Trump responded, “No, I don’t have any.” On Monday the president reiterated his position on social media.

The president did sign an executive order in June

asking technology companies to voluntarily allow the government to review new artificial intelligence models before releasing them. That’s not nearly enough.

On Monday, Governor Maura Healey joined calls for federal action on AI, saying, “We need President Trump and Congress to do their jobs.” Last week, President Obama said Democrats should make AI the center of their agenda.

If the Democrats take control of the House come November, the Massachusetts constituency should take a leadership role pushing sensible AI oversight,

Given the wide range of uncertainties, and the truly terrifying worst-case scenarios, it’s imperative that we regulate AI more closely and slow things down to tip the scales toward the better outcomes.

a tack Representative Lori Trahan appears poised to take.

Some members of Congress from California might be too enthralled with the economic growth in Silicon Valley. But lawmakers from the Commonwealth, which has a wealth of tech startups and academic expertise but isn’t dependent on the industry in the way that California is, can offer a more distanced perspective while also having some economic skin in the game. To that, Trahan has urged caution on outright bans or moratoriums on AI growth — as Vermont Senator Bernie Sanders is calling for — but is pushing for risk-management frameworks for AI.

In the absence of strong federal leadership, states are the next backstop. Across the nation, legislatures have enacted laws targeting data privacy and accountability. Yes, states can only do so much to tackle a global issue, but they can still play a role, especially in tech-heavy places like Massachusetts.

“My fear is that we don’t know where it’s going. ... The key is making sure we have the safeguards in place,” Democratic state Senator Michael Moore of

Millbury, chair of the Joint Committee on Advanced Information Technology, the Internet, and Cybersecurity, told the editorial board.

“The question we have to ask ourselves: Is economic growth by AI that is uncontrolled, should that take precedent over the basic safety of our culture and society?”

The Legislature is considering a slew of bills to establish guidelines for both developers and users of AI, including prohibiting misleading AI-generated election material and placing limits on employer use of electronic surveillance in the workplace. Another bill calls for the creation of a board to regulate the development and deployment of AI that’s built in the Commonwealth.

Some computer scientists have said the most dire predictions coming out of Silicon Valley, and calls for government guardrails, are overblown, that tech titans are stoking fears and asking for regulatory oversight to make it harder for smaller companies to compete with them.

But tech moguls have been warning of the dangers of artificial intelligence for at least a decade.

John Sterman, a professor at MIT’s Sloan School of Management, has called AI both “promising and problematic.” He’s skeptical the industry can adequately regulate itself, sees dangers with AI, but also doesn’t buy into the most extreme claims of an AI apocalypse.

“A lot of people are worrying about this, but nobody knows,” Sterman told the editorial board. When asked about the recent idea that there’s a greater than 10 percent risk of AI destroying humanity, Sterman said, “I have no idea what justifies that level of precision,” questioning the scientific methodology behind the claim.

Sterman does, however, see outcomes where AI can be harnessed to solve societal problems such as climate change, but, he said, first and foremost, that will take smarter government policies and incentives. A new simulator he helped develop, En-ROADS, allows users to explore AI’s potential impacts on climate change, positive and negative, depending on which path we choose.

AI has shown us the incredible positives and the undeniable harms it’s capable of inflicting. AI tools are only going to get more advanced and powerful. Having adequate outside oversight to control them should’ve been step one.

MARCELA GARCÍA

What if the smartest thing AI does this year is help a dog?

Many dog owners have a version of my search history.

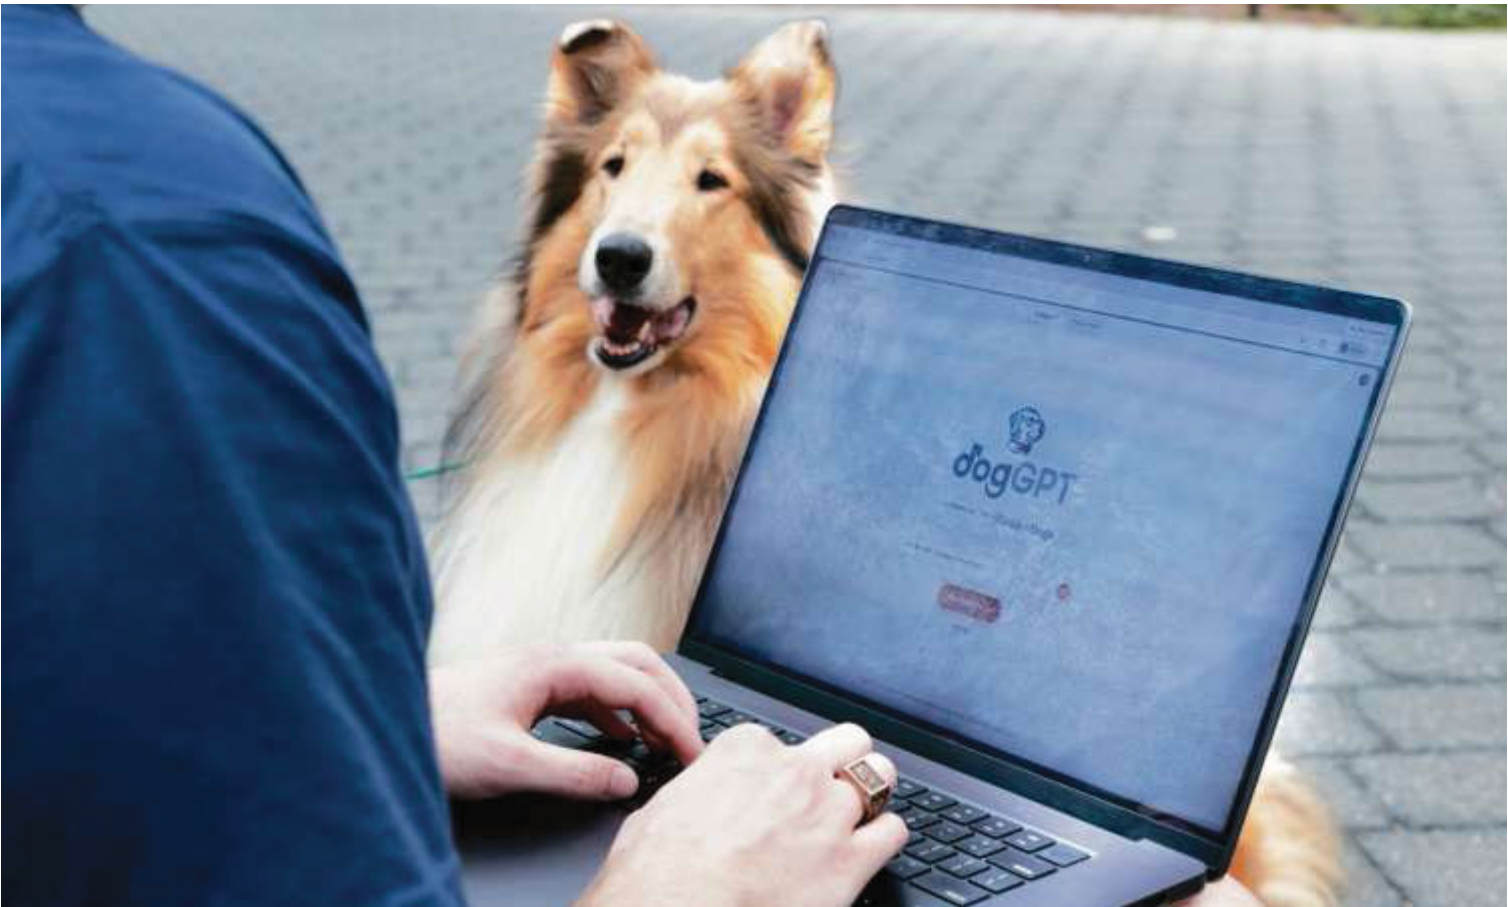

Our dog, Benito, was a puppy thug — leash reactive, selectively deaf, committed to chaos. I have loved dogs my entire life and I still spent his first year googling: Why does he lunge and bark at other dogs? Is this normal? Is it us?

A Boston-area startup thinks a chatbot, aptly named dogGPT, can answer the questions that keep dog owners up at night better than the Reddit threads your Google search is likely to send you to.

Be warned: This isn’t a catastrophizing column about whether AI will end us; the head of Anthropic already went there last week. It’s about a narrower question: What happens when people who actually know dogs get hold of the technology? The early answer — from dogGPT to a camera that catches a limp before you do — is that they help you decide whether you need to go the vet faster.

dogGPT, which launched publicly last month, is the work of Good Owners, a small Waltham company founded in 2021 to write, of all things, a book: a digital dog ownership 101. The resulting guide was shaped by dog experts — such as trainers and scientists — who the company says have more than 200 years of combined experience. Then two MIT-trained engineers spent months building and refining a Large Language Model (the kind of AI that powers chatbots like ChatGPT) grounded in the guide. dogGPT is \$1.99 a month and the company says half its profits go to dog charities.

It’s a simple idea with a big audience. Americans brought home roughly 4 million new dogs last year. In one industry-sponsored survey, 43 percent of pet owners said

BRUNO MUÑOZ-OROPEZA

Raja Rajcic, dogGPT’s chief technology officer, demonstrated the local AI-powered platform on a laptop beside Jane, a collie.

they had already asked ChatGPT or a similar tool about their pet’s well-being or behavior. Good Owners’s own research suggests roughly one dog household out of nine is struggling with its dog in any given month.

“What happens today when [dog owners] go looking for information?” Darin Bellisario, Good Owners’s founder and CEO, told me. Bellisario is an MIT-trained scientist and former McKinsey consultant. “They go to Google. You find dozens of videos and blog posts and articles that are either contradictory or outdated or inaccurate, or whatever the algorithm or the ranking wants to show you.”

For now, dogGPT focuses on behavioral questions, and the plan is to expand to health over time, Bellisario said. The idea isn’t to replace a trainer or a vet — it’s for dogGPT to be what you consult before a Facebook group and to send you to a professional sooner. “Parents ask how do I stop my dog jumping on guests,” or what to do with a hyperactive puppy, Bellisario said. “What they’re really asking is *why*.”

The US pet market is projected to hit \$165 billion this year, and the industry giants have poured money into AI, though as far as I can tell almost none of it into teaching owners

about their dogs. For instance, Chewy’s bots handle returns.

Meanwhile, the AI gold rush has reached the pet aisle.

Vipal Patel sees the gold rush from the inside. As vice president of capital markets at Post Oak Group, a Houston investment bank that helps companies raise \$5 million to \$50 million, he hears from five to seven companies a day. Half involve AI. “Like AI HR,” Patel told me. “I swear I get two or three of those a week.” Every couple of months, one is about pets. But most don’t survive a basic question: A startup pitched him a pet chatbot with no knowledge base behind it, just the open web. “I can ask Claude to do that already,” he said. Good Owners got his attention because the answers come from trainers. Bellisario told me the company is weighing investment opportunities.

Despite the dire warnings from AI’s own architects, it’s not hard to find experts in the pet world who are hopeful about AI’s promise. “It’s a force multiplier for compassionate care,” Dr. Marty Becker, also known as “America’s Veterinarian,” told me. “Machine learning, AI, is going to help you know sooner and worry smarter.”

Consider John Honchariw, a serial tech entrepreneur, who built an artificial intelligence software that analyzes video and flags signs of orthopedic pain in dogs and cats. The tool, which has owners film their pets before a vet visit, works on behalf of the veterinarian for screening purposes. Animals send a lot of signals through their bodies and movements, Honchariw told me. “It’s just that we miss the majority of it, because one, we’re just not there a lot of the time, and two, we don’t know about it. Nobody teaches us.”

Here’s why I’m rooting for these startups: Many dogs hurt in silence and too many end up back at the shelter — and behavior tends to be the leading reason owners give them up. Both are failures of translation. Which brings me to Benito, who was just trying to tell us something, and it took several trainers *and* a prescription before we understood him.

“Our dogs are communicating with us,” Becker said. “It’s just we don’t know how to communicate with them.”

Harrowing testimony opens Vt. shooting trial

►SHOOTINGS
Continued from Page A1

All three survived, but Awartani was paralyzed from the chest down. Eaton has pleaded not guilty, and his attorneys argue that he was legally insane at the time.

The case rattled this small city and drew international attention because it came just weeks into the Gaza war — a time of heightened Islamophobia and antisemitism — and because the victims were Palestinian and Palestinian-American. Two were wearing black and white keffiyehs, traditional Palestinian headscarves, when they were shot.

Authorities had initially suggested the shooting could constitute a hate crime, but prosecutors said they did not turn up enough evidence to pursue such a charge.

The victims were 20-year-old students at the time — Aliahmad at Trinity College, Awartani at Brown University, and Abdalhamid at Haverford College. They had grown up together in the West Bank, attending the same Quaker school.

Until Monday, it was unclear whether they would appear at the trial at all. Prosecutors had said earlier this year that the case’s many delays might result in them missing it because they

had planned to return to the West Bank this summer.

But in a dramatic turn, all three appeared in the courtroom to offer vivid testimony about the shooting, which took place over Thanksgiving break, when they were staying with Awartani’s grandmother in Burlington.

Testifying from a wheelchair, Awartani described seeing an older, skinny, white male with gray facial hair on the porch of a nearby house as he and his friends returned to his grandmother’s house. The man approached without a word and fired at them several times, he said.

Awartani listened as prosecutors played a 911 call he had made as he lay on the ground bleeding.

“I’ve been shot! I’ve been shot! I’ve been shot!” Awartani told a dispatcher.

When she asked whether he was requesting an ambulance, he said he needed all the help he could get.

“I think I’m gonna die,” he said.

Abdalhamid said he managed to run, jump a fence, and ask a neighbor for help. He said he did not notice he had been shot — in the buttocks — until he later sat down.

Eaton’s attorneys did not say Monday whether their client

GLENN RUSSELL/VTDIGGER VIA ASSOCIATED PRESS

Hisham Awartani testified in court about being shot and paralyzed while walking in a Burlington, Vt., neighborhood.

pulled the trigger, but they made clear their focus would be on his state of mind at the time.

In an opening statement, public defender Josh O’Hara said Eaton had lost his job at a local credit union two weeks before the shooting. Then, he began to hear messages he believed were from the Central Intelligence Agency — and perhaps Israeli intelligence — while listening to a local public radio station, O’Hara said.

The messages were initially positive and validating, commenting on the good work Eaton had done in his life, his attorney said, and suggesting that people he knew were co-

vert agents.

But the missives eventually turned darker, O’Hara said. Eaton came to believe he had a duty to keep watch over and protect a Jewish family that lived across the street from his apartment.

“Around this time, he sees three people go walking down the street, and the command is that he is supposed to shoot them,” O’Hara said.

Eaton was suffering from a delusional psychotic episode at the time, O’Hara said, and “he believed in the moment that he was doing something that was right, that demanded this, and that he did not have the ability

to appreciate the wrong conduct in the moment.”

But prosecutor Sally Adams said in her opening statement that Eaton was not legally insane at the time of the shooting. Rather, she said, he was arrogant, had a “grandiose sense of self-importance,” and took advantage of others.

Much of the trial is expected to hinge on the testimony of experts on either side of the case with opposing views of Eaton’s state of mind. But on its opening day, jurors also heard from the doctors and nurses who treated the victims and from law enforcement officers who responded to the shooting.

Two local agents with the US Bureau of Alcohol, Tobacco, Firearms and Explosives who investigated the case, Samuel Brown and Eric Brimo, described knocking on doors the day after the shooting at the apartment building from which the assailant allegedly emerged.

When they reached Eaton’s apartment on the third floor, he opened the door and told them he had been waiting for them, the agents testified. He then raised his arms, palms up, as if surrendering, and asked for a lawyer, they said.

A public radio station was playing in the apartment, covering the search for the shooter

— a “surreal” moment, Brimo said.

It’s unclear how much cultural identity will factor into the trial, but it did affect courtroom attire on Monday.

Before jurors took their seats, Chittenden Superior Judge John Pacht said that, after consulting with both parties, he had decided attendees could not wear keffiyehs in court throughout the proceedings.

“I’m concerned that the wearing is to be a silent type of evidence that could impact jurors, and I don’t want to create any issues that may or may not arise,” Pacht said.

He made an exception for those testifying. All three victims wore theirs.

Wafic Faour, 66, a leader of the Vermont Coalition for Palestinian Liberation, was among several people in the courtroom who removed or covered up their keffiyehs. He told the Globe he was “extremely surprised” by the judge’s order, which he said violated his First Amendment rights.

“To a Palestinian person like me, it’s like he is stripping me from my own identity,” Faour said.

L.L. Bean sets \$2b revenue goal, while rebooting flagship store

►L.L. BEAN
Continued from Page A1

The bet goes well beyond Freeport. L.L. Bean is opening stores in new markets, refreshing its classic products, courting younger shoppers, and looking for new ways to connect with customers — all as it tries to break out of a decade of sluggish growth without losing what made it beloved in the first place.

The company traces its roots back to 1911, when Leon Leonard Bean developed a signature three-stitch boot designed to keep hunters’ feet dry.

Years later, he opened his first store in Freeport, selling those boots on the same stretch of Main Street where the flagship stands today.

What began as a mail-order business built around that single product — and later became known for catalogs filled with plaid flannels, canvas totes that can be carried from beaches to grocery stores, and pictures of golden retrievers — has grown into one of New England’s best-known brands.

But despite its enduring popularity, L.L. Bean’s revenue has barely budged in recent years.

L.L. Bean, which has roughly 5,700 employees across the US and is still owned by its founder’s descendants, reported \$1.6 billion in revenue in 2015. Ten years later, it reported \$1.7 billion — a modest increase before even accounting for inflation. Sales jumped during the pandemic-era while consumers flocked outdoors, reaching \$1.8 billion in revenue in 2021 and 2022, but has since fallen back.

For a privately held company that long prized steady and deliberate growth, flat revenue is not as alarming to its executives as it might be to those answering to public market shareholders, said chief executive Greg Elder. Elder, who became chief executive officer this year after leading the company’s retail division for two decades, has set a goal of \$2 billion in revenue by 2030.

“We’re going to get back to growth,” Elder said when asked about his personal goal for the company.

The target is part of a five-year plan called Vision 2030, which Elder said will focus on introducing new products, branding, and distribution channels. For instance, Elder said, L.L. Bean is bringing in more new products and styles each year than ever before — even as it continues to lean on its classics.

But over the past decade, L.L. Bean has experienced its own hiccups, making some decisions that challenged parts of its folksy identity.

In 2018, the company replaced its legendary lifetime return policy with a one-year window, saying a growing number

PHOTOS BY MELECK ELDAHSHOURY FOR THE BOSTON GLOBE

L.L. Bean’s flagship campus in Freeport, Maine, has undergone a \$50 million renovation. Fitting rooms (below) in the remodeled store featured the store’s signature outdoorsy style.

of its customers were abusing the policy and costing L.L. Bean roughly \$250 million over five years. Elder said the retailer has no plans to bring the policy back.

“The abuse was vastly outpacing our ability to manage it, and that is really unfortunate,” said Elder. But he says the company continues to stand behind its goods, which have a reputation for lasting for years. “It’s undeniable that our focus is always on value and durable products.”

A year earlier, a boycott campaign targeted L.L. Bean after board member and founder’s descendant Linda Bean donated to a political action committee supporting President Trump.

At the time, the company said Bean did not speak for the company, which does not endorse candidates or political agendas. (Linda Bean died in 2024 at 82.)

Inside the flagship store, L.L. Bean is trying to walk the same line: preserving the history that made it an American institution while attracting younger customers and showing them there’s more to it than hunting gear and duck boots.

Part of its pitch to those desired customers is about doubling down on its old-school formula.

It makes many of its products, including the Bean Boots, in a manufacturing facility in Brunswick, Maine. And it continues to print catalogs, doing so without the use of AI.

Lauren Beitelspacher, a Babson College marketing professor,

said L.L. Bean has been able to protect its brand over the years by sticking to its roots instead of reaching for fleeting trends.

“How do you stay true to who you are and not alienate your current customers while also attracting that next generation of customer? They’ve not tried to be something that they’re not,” said Beitelspacher.

Part of the appeal to younger customers has come organically, through new takes on classic products.

The company has refreshed its archival-inspired “Signature Collection” and updated staples such as the field coat, a canvas hunting jacket from 1924 designed to withstand the briars of the thick Maine woods. Its women’s styles now include cropped cuts and embroidered patterns. Perhaps the clearest example is the Boat and Tote, the simple canvas bag that has become a TikTok sensation.

The bag dates to the 1940s,

and customers have long been able to add their initials or names to the front. Now younger consumers are opting for phrases such as “cool mom” or “hot mess.” (Others are too provocative to print in a family-owned newspaper.)

At the Freeport flagship, that personalization has a bigger physical home than ever. An entire floor is devoted to customization, where shoppers can embellish totes, coats, denim, and other items with embroidery, key chains, bandanas, and patches that lean into New England identity.

“What started as a century-old product took on new life because consumers were able to make it their own and, importantly, share those creations online,” said Romain Fouache, the CEO of product experience firm Akeneo in Boston.

L.L. Bean is also trying to reach customers through a series of new partnerships, includ-

ing a campaign with New England Patriots quarterback Drake Maye and his wife, Ann Michael Maye, and collaborations with Vermont singer-songwriter Noah Kahan and Boston’s Harpoon Brewery.

But Elder said the strategy isn’t simply about capturing Gen Z. It’s about getting beyond New England. Elder said L.L. Bean’s biggest untapped opportunity is geographical expansion.

L.L. Bean opened seven stores in 2025 and eight more this year, bringing its retail footprint to 76 stores. It plans to open another 10 in 2027, extending its reach into new markets in the Midwest and Southeast.

The company is hardly behaving like a retailer desperate to plant a flag everywhere it can. Elder said it plans to expand methodically, focusing on the right communities. L.L. Bean has stores in only 21 states, with just two south of Virginia.

“There’s just this outcry that we’re hearing from consumers all over, saying ‘Come open a store,’” said Elder.

In Freeport, executives are betting that the store can be something more than just a place to buy some gear.

There’s a trout pond, a tank of fish that kids can view through a crawl space, an expanded café, and a children’s area modeled after Maine summer camps. They expanded their green space in front of the store for community events and outdoor programs. There will even be a beer garden with local

brews.

The building itself screams Maine, with wood framing, natural materials, and imagery of the outdoors. Other parts feel like a museum, with displays showing iterations of the company’s signature Bean Boots.

The approach reflects a broader shift in physical retail, where stores increasingly need to give customers a reason to visit beyond just buying merchandise.

“Teaching a child to fish, helping someone prepare for their first camping trip or creating programming that gets a family outdoors could create a much deeper relationship with the brand,” said Stephanie Boyd, a consumer-focused marketer and cultural anthropologist.

Roughly 3 million to 4 million people visit the flagship annually, making the Freeport store a tourism draw as much as a retail destination.

The question is how much that experience is worth to L.L. Bean.

The company’s executives argue that the value of the flagship will extend beyond what shoppers buy inside into a destination. But that makes the return on its \$50 million investment much harder to measure. Elder said he plans to roam the store after it opens, take his badge off, and listen to what the customers have to say. The company will also measure the amount of time people spend in the store, and whether the experience brings in new customers.

Todd Drowlette, a retail real estate executive who has represented major retailers for almost three decades, said he would not have spent \$50 million on the project himself.

“Time will tell very quickly if L.L. Bean did the right thing,” he said.

The flagship will undoubtedly draw crowds when it officially reopens the weekend of Sept. 18, followed by six weeks of events, including concerts, drops of vintage Bean products, movie nights, and even autographs and selfies with Boston Red Sox legends.

The harder test will come after the holiday season, when the company can begin measuring whether those first-time visitors will return.

“Freeport is a rare combination of hometown campus, tourist destination, community gathering place, and the brand’s origin story,” said Jessica Murphy, the co-founder and CEO of True Fit, a size intelligence platform based in Boston.

“The principles can be replicated,” she said. “The place cannot.”

KEVIN CULLEN

We don't know Trump

After all these years, we think we know Donald Trump. But do we? We thought he was a Republican. But it turns out he's an Irish republican.

We thought he was orange. It turns out he's green. We thought he was a sinner. Turns out he's a Shinner. The Shinners, aka Sinn Féin, are the Irish republican party that want a united Ireland now. When Trump arrived in Ireland this past weekend he announced he thought a united Ireland right now is a good idea, and the Shinners were as surprised as anyone.

They are among the majority of Irish people who consider Trump a fascist, and that's about the nicest thing they say about him.

But they, like the rest of the Irish people, were left to wonder what to do when Trump suddenly proclaimed that he agreed with them on reunification.

Gerry Adams, who as Sinn Féin leader persuaded the Irish Republican Army to lay down their arms and embrace a purely political path to reunification, appreciated Trump's remarks, with reservations.

"Yesterday's remarks by President Trump on the issue of Irish unity are welcome, even though we profoundly differ with him on many other matters, as we did with his predecessors," Adams said in a statement. "They reflect the broad north American sentiment towards Irish unity and particularly the Irish diaspora towards Irish reunification. And this is increasingly reflected in mainstream dialogue."

Leave it to Trump to flip the script. Irish diplomats were lying awake at night in anticipation of Trump's visit, which was really just an excuse to visit his golf resort in Doonbeg, in West Clare, which hosted the Irish Open.

Irish diplomats worried protests against Trump might get out of hand, that Trump would slap more tariffs on Irish goods in retaliation, or that he'd go off on all the tax revenue the United States is losing to American companies based in Ireland.

Instead, Trump announced he was lifting tariffs on Irish whiskey, a libation which, incidentally, was invented to prevent the Irish from taking over the world.

Trump abruptly seemed to jettison decades of US policy that studiously avoided taking sides on whether Northern Ireland should remain part of the United Kingdom or join the Republic of Ireland, saying he believed a united Ireland was inevitable.

"I don't want to cause any problems," Trump began, then did exactly that by adding, "but I will tell you, I'd love to see it unified."

Ireland's taoiseach, or prime minister, Micheál Martin, who was sitting next to Trump in Dublin when he said this, smiled wanly, like a deer in the headlights.

"I think it would be a great feather in everybody's cap if that happened," Trump continued. "You know what? The way I look at it, it's going to happen eventually. It may as well happen now."

Trump allowed there are some diplomatic niceties involved.

"The UK will have something to say about it, obviously," he acknowledged. "But I think it would be a great thing. I mean, how can it be bad?"

I'm going to go out on a limb here and suggest that Trump has never heard of Sandy Row, a gritty enclave in Belfast peopled by hard men with tattoos on their forearms and menace in their hearts who would think it would be very bad, indeed.

The Good Friday Agreement of 1998 established that Northern Ireland would remain part of the United Kingdom until a majority of people living there, and a majority in the Irish Republic, voted otherwise.

The language on timing for a such a border referendum, however, was left vague, on purpose, lest those thugs in Sandy Row and elsewhere decide to stockpile petrol bombs and resume killing Catholics.

Last month, Britain's new prime minister, Andy Burnham, threw cold water on the idea of a border vote any time soon.

The Irish government is ostensibly

Visa cap for international students delayed

By Michaela Towfighi
GLOBE STAFF

A federal judge in Boston Monday postponed a Trump administration policy, one day before it was set to take effect, that would restrict the number of years international students can study in the United States.

For decades, international students have been admitted to study in the United States on visas that were valid as long as a student was enrolled in a program, with no time constraint. But in July, the Department of Homeland Security announced that

Judge calls proposed US 4-year restriction 'exceptionally weak,' sets October hearing

starting Sept. 15, visas would have a four-year cap, and students could apply for an extension if needed.

The department said the new rules were aimed at cracking down on "immigration fraud."

Last month, leaders in higher education filed a lawsuit in Boston arguing that the new policy was based on an arbitrary timeline and would be detrimental to universities.

In his ruling Monday, Judge F. Dennis Saylor called the government's rationale for the rule change "exceptionally weak."

Saylor said the current system has led to "groundbreaking research in science, medicine, and technology, substantial economic growth." If implemented, he said the visa restrictions would cause damage to both to the economy and higher education in-

stitutions that "is likely to be catastrophic."

"Immigrants to the United States who attended American universities have been named as inventors on a disproportionate number of patents and have been awarded a disproportionate number of Nobel Prizes," he wrote.

DHS issued a statement saying "the performative outrage is incredible."

"Where was the outrage when foreign nationals were abusing the system?"

AS I SEE IT

The Boston Bridge Brigade greets drivers heading north on the Southeast Expressway. Members, including one dressed as a lobster, say their purpose is to let people know they are not alone and to inspire them to speak up. Some motorists shout their approval.

An anti-Trump brigade, with a message for motorists

Just past 8 on a Tuesday morning, 11 members of the Boston Bridge Brigade are in their usual spot on the Savin Hill Avenue overpass on the Southeast Expressway.

They stand with their latest pro-democracy message: "EPSTEIN COVERUP IS THE CONFESSION," and wave at commuters crawling northbound below.

On the bridge, Stephen Stills' classic protest anthem "For What It's Worth"

pierces the air. Below, there's plenty of horns honking mixed in with a few one finger salutes. Other drivers just stare straight ahead, like bleary-eyed traffic zombies.

Toby Peterson, one of the demonstrators, says that the nonstop Trump news cycle has bombarded and divided the country with lies. People have gotten numb listening to it, she says.

"It's too much for the public. It's way

too much. It's like a hose" says Peterson, a nurse.

The Dorchester demonstrators are part of Visibility Brigades, a national network that encourages local activists to bring their message of resistance to busy overpasses.

The Highlanders Visibility Brigade stands above the Mass. Pike in Newton on Thursday mornings. Another in Jamaica

Wu to employers: Hire our youths

The city plans to roll out a new website listing available jobs

By John Hilliard
GLOBE STAFF

Mayor Michelle Wu has an ask of Boston's private employers: *Hire our young people.*

Speaking at a press conference, Wu made the case Monday for local companies to help provide school-year jobs for young people as her administration works to keep the city's longstanding employment program

running amid a some of the toughest financial headwinds since the Great Recession.

For months, the Wu administration has been trying to salvage the program after a budget crunch slashed most of the \$5.5 million funding for an initiative in which the city paid young people to work at local companies.

Last year, nearly 150 employers

participated in the school-year program, which made 1,800 jobs available to people from ages 14 to 24.

Despite the budget cut, Wu's team has been pushing to expand the program to 2,000 positions funded largely by private employers.

The city is 400 jobs short of its goal, but plans to roll out a new website listing available jobs for young

Assistant New Hampshire Attorney General Christopher Knowles spoke at Adam Montgomery’s first trial in 2024.

Montgomery retrial expected in late '27

By Steven Porter
GLOBE STAFF

MANCHESTER, N.H. — Adam Montgomery, whose conviction of second-degree murder for fatally beating his 5-year-old daughter, Harmony, was overturned on appeal, is expected to go back on trial for allegedly causing her death — but not for at least another year.

Montgomery, 36, had been convicted in 2024 of second-degree murder for beating the girl to death in 2019. Her remains have never been found.

The New Hampshire Supreme Court ruled in June that the murder charge against Montgomery should have been separated from a second-degree assault charge that stemmed from prior physical abuse of his daughter. The justices said keeping those two together in a single case jeopardized his right to a fair trial. They reversed his murder conviction but left his other convictions intact.

Prosecutors vowed to push for a new trial, and the parties said during a brief court hearing Monday morning that they anticipate asking the judge to schedule jury selection to occur in October 2027 — about four months after what would have been Harmony’s 13th birthday.

Kim Cossack, an attorney with the New Hampshire Public Defender, represented Mont-

gomery during Monday’s hearing. She said she was recently appointed to this case after her predecessor retired. She told the judge she is just now beginning to dig into the discovery.

Benjamin J. Agati, senior assistant attorney general with the New Hampshire Attorney General’s Office, said there are thousands of pages of discovery, trial transcripts, and pretrial litigation that Montgomery’s new legal counsel will need to review.

“They certainly need adequate time to be able to get up to speed,” he said.

Agati said his team will review materials, contact witnesses, and prepare for trial again. He declined to elaborate on the state’s litigation strategy this time around.

Montgomery, who was granted custody of Harmony despite his lengthy and violent criminal history, is accused of killing his daughter in December 2019 after she soiled herself in the back seat of a car where their family of five was living following an eviction. He stands convicted of falsifying physical evidence, witness tampering, and abusing his daughter’s corpse, since he concealed her death for months while repeatedly moving and repackaging her body.

The evidence at trial showed Montgomery discussed plans to dismember and dispose of her

remains, according to the Supreme Court ruling. He bought lime, a grinder, and a blade, thawed her body in an apartment bathtub then refroze it hours later. In March 2020, he left in the middle of the night with a bag containing her remains, returned empty-handed, and told his wife he “got rid of her.”

Montgomery didn’t tell authorities where he dumped her body, which still hasn’t been found.

“We are still looking for her,” Agati said on Monday.

Harmony’s disappearance went largely unnoticed by authorities in both states until November 2021. That’s when her mother, Crystal Sorey, went to police in Manchester in a frantic effort to find her daughter after Montgomery cut off contact.

Sorey had lost custody in 2018 while she was struggling with addiction, and a Massachusetts juvenile court judge subsequently awarded custody to the girl’s father. On behalf of Harmony’s estate, Sorey filed wrongful death lawsuits against both New Hampshire and Montgomery.

While multiple witnesses testified at trial about Montgomery having assaulted his daughter months before her death, the only direct evidence that he had delivered the fatal blow came

from the gruesome testimony of his estranged wife, Kayla Montgomery, who served time in prison for initially lying to authorities investigating Harmony’s disappearance.

The defense attorneys questioned Kayla Montgomery’s credibility and argued she may actually have been the one who caused the girl’s death.

Adam Montgomery’s remaining criminal convictions, including from an earlier firearms case, mean he is still subject to a total prison sentence of 43.5 years, according to prosecutors, who have vowed to push for a new trial on the murder charge in hopes of adding to his penalties.

“We remain confident in the facts of this case, the evidence presented, and the exceptional work of our prosecutors, investigators, and law enforcement partners,” a spokesperson for the state attorney general’s office, Michael S. Garrity, said in June.

Montgomery, who had been serving his sentence at a facility in Virginia, was transferred back to New Hampshire in anticipation of the retrial, according to court records. He did not attend Monday’s hearing in person.

Defrocked priest, convicted child abuser Paquin dies in Maine

By Nick Stoico
GLOBE STAFF

Ronald Paquin, a defrocked Catholic priest who sexually abused boys in Massachusetts and Maine and spent much of the past two decades in prison, died in a Maine prison at age 83, officials confirmed Monday.

Paquin died about 4:15 p.m. Friday at Mountain View Correctional Facility in Charleston, Maine, according to the state’s Department of Corrections.

The department did not disclose a cause of death. Medical workers were present when Paquin died and the offices of the Maine attorney general and medical examiner were notified, officials said.

Paquin was serving a 20-year prison sentence after he was convicted of 11 counts of gross sexual misconduct in 2018.

Boston attorney Mitchell Garabedian said he represented more than 25 people who were sexually abused by Paquin as children.

His death “brings a measure of relief to many clergy sexual abuse victims and survivors because they feel as though Fr. Paquin will no longer be able to sexually abuse children and destroy innocent lives,” Garabedian said Monday in a statement.

“With all due respect, society has not lost a great human being,” he added.

Paquin was among the priests whose abuse was documented in the Globe’s Spotlight investigation into clergy sexual abuse in the early 2000s. He was later portrayed in the 2015 film “Spotlight,” which chronicled the Globe’s investigation.

Garabedian said his clients were abused from about 1973 to 1990, when Paquin was assigned to St. Monica’s Parish in Methuen and St. John the Baptist Parish in Haverhill.

Paquin was ordained in 1973 and began at St. Monica’s, where he was in charge of altar boys, Boy Scouts, and the Catholic Youth Organization, according to previous Globe reporting. He was transferred to Haverhill in 1981.

In a 2002 interview with the Globe, Paquin acknowledged molesting boys in both communities.

“Sure, I fooled around. But I never raped anyone, and I never felt gratified myself,” he said.

Later that year, Paquin pleaded guilty to three counts of child rape and was sentenced to 12 to 15 years in state prison.

Church records showed that the Roman Catholic Archdiocese of Boston received 13 complaints about Paquin between

ADMITTED GUILT
Paquin
was
serving a
20-year prison
sentence.

1990 and 1996, the Globe reported in 2002. He was removed from his Haverhill parish in 1990 and sent for treatment in Maryland but was later allowed to return to priestly duties as a hospital chaplain, the Globe reported.

In December 2000, Cardinal Bernard Law wrote to the Vatican asking that Paquin be removed from the priesthood, writing that 18 cases of alleged abuse had been reported to the archdiocese.

“It is my judgment that he is the cause, potential and actual, of grave scandal,” Law wrote, according to the Globe.

Law resigned as archbishop in December 2002 in the wake of the Spotlight investigation and mounting criticism of his handling of sexual abuse cases. He later moved to Rome and died in 2017.

After serving more than a decade in prison in Massachusetts, Paquin was released in 2015 and then prosecuted in Maine for sexually abusing boys during trips to Kennebunkport in the 1980s.

Paquin was charged with assaulting two boys when they were 14 or younger between 1985 and 1988. A jury convicted him in 2018 on 11 of 24 counts of gross sexual misconduct.

At sentencing, Justice Wayne Douglas said he didn’t detect expressions of remorse or responsibility from Paquin and said he had betrayed the “sacred trust” of his victims.

Keith Townsend, who publicly identified himself as a victim, testified that Paquin’s abuse sent him into depression and drug abuse and caused him to question his faith.

“I just hope it shows victims who are still living in the shadows that they can come forward,” Townsend said after Paquin was sentenced.

Nick Stoico can be reached at nick.stoico@globe.com. Jeremiah Manion and John R. Ellement of the Globe staff contributed to this report. Material from the Associated Press was also used.

Fatal Needham garage fire ruled an accident

By Bryan Hecht
GLOBE CORRESPONDENT

A garage fire in Needham that killed a Syracuse University student on Christmas Eve was “clearly accidental” and could have originated from a number of sources, fire officials said Monday.

Investigators found “no evidence of an intentionally set fire” at 28 Woodworth Road, state and local authorities said in a statement.

Kayla Corrigan, 21, a business student and sorority member soon to graduate from Syracuse University, was killed in the fire. Two other residents of the home escaped.

Since multiple ignition sources may have been responsible, the cause of the fire is undetermined, officials said.

Under National Fire Protection Association guidelines, officials should consider the cause of a fire undetermined when

“two or more hypotheses cannot be rejected,” officials said.

In the rightmost bay of a garage attached to the home, where it is believed the fire originated, witnesses said that power tools, flammable liquids, and other possible ignition sources had been stored, officials said.

Investigators also found remains of lithium-ion batteries as well as a power strip nearby to an electrical outlet in this area.

All of these possible causes

“were clearly accidental,” officials said.

The house, a six-bedroom, 6,500-square-foot home, sustained “catastrophic damage,” in the fire, officials said. It was located on a private way off a tree-lined street and was built in 2014, records show.

Birthdays: Writer-director Ron Shelton is 81. Actor Tommy Lee Jones is 80. Film director Oliver Stone is 80. TV personality Lisa Vanderpump is 66. Football Hall of Famer Dan Marino is 65. Actor Josh Charles is 55. Olympic gold medal swimmer Tom Dolan is 51. Actor Tom Hardy is 49. Prince Harry, Duke of Sussex, is 42. TV personality Heidi Montag is 40. Singer-songwriter Ella Boh is 25.

►In 1776, 250 years ago, British forces invaded Manhattan, landing at Kip’s Bay on Manhattan and forcing a hectic, unorganized retreat by rebel militia to Harlem Heights.

►In 1835, Charles Darwin reached the Galápagos Islands

aboard the HMS Beagle.

►In 1935, the Nuremberg Laws were enacted in Nazi Germany, depriving German Jews of their citizenship.

►In 1940, the tide turned in the Battle of Britain in World War II, as the Royal Air Force inflicted heavy losses upon the Luftwaffe.

►In 1958, a commuter train headed for New York City plunged into Newark Bay after missing a stop signal and sliding off the open Newark Bay lift bridge, killing 48 people.

►In 1959, Nikita Khrushchev became the first Soviet head of state to visit the United States as he arrived at Andrews Air Force Base outside Washington.

►In 1963, four Black girls were killed when a bomb went off during Sunday services at the

16th Street Baptist Church in Birmingham, Ala. (Three Ku Klux Klansmen were eventually convicted for their roles in the blast.)

►In 1978, Muhammad Ali became the first boxer to capture the heavyweight title three times, winning by unanimous decision in his rematch with Leon Spinks.

►In 2008, as a result of the subprime mortgage crisis, Lehman Brothers filed for Chapter 11 in the largest bankruptcy filing in US history.

►In 2021, SpaceX’s first private flight streaked into orbit with two contest winners, a health care worker and their billionaire sponsor, in the most ambitious leap yet in space tourism. The trip dubbed Inspiration4 marked the first time a spacecraft circled Earth with an all-

amateur crew and no professional astronauts.

►In 2020, Israel signed historic diplomatic pacts with two Gulf Arab states at a White House ceremony President Donald Trump called the “dawn of a new Middle East.” The bilateral agreements formalized the normalization of Israeli relations with the United Arab Emirates and Bahrain.

►In 2024, a man aiming a rifle through shrubs as then-presidential candidate Donald Trump played golf at his West Palm Beach, Fla., country club was spotted by a Secret Service agent who fired at him, prompting the man to drop his gun and run without firing a shot. Ryan Routh was later convicted of trying to assassinate Trump and sentenced to life in prison.

Anti-Trump group is driven to take message to motorists

►GROSSFELD
Continued from Page B1
Plain takes over the Savin Hill overpass once more on Fridays. Here, on the far end of the Tuesday protest, a lady dressed as a red lobster stands with her claw raised high. She’s the exclamation point on today’s message.

The costumed crustacean won’t give her name, because resistance is not about one individual, she says. But she’s passionate enough to stand there until she’s boiling from the sun and finally molts to get some air and water. “Are you steamed?” a bystander asks her. “I am today,” she says. Literally and figuratively. “I’m very concerned about dictatorship, fascist impulses, and the serving of the oligarchy, for sure,” she says. The Lobster Lady says she has documented motorist reactions in the past.

“So, there’s usually about 25 percent positive responses where people are like honking, or visibly positive responses ... and about 1 percent that are negative. Those folks are very negative. It’s so sad because they’re just filled with hate,” she says. “It’s only a reflection of their own small world.”

The Boston Bridge Brigade describes itself as “a few friendly people who want to Save America from oligarchy and be visible with impactful messaging in public places, e.g. on bridges over highways to reach as many people as possible.” Their efforts are getting noticed. The Dorchester Reporter posted a photograph of the group holding a “WAR CRIMES DON’T HIDE SEX CRIMES” sign and said it received more than 1.5 million views on Instagram. They hail from different walks of life, including a medical doctor, nurse, social worker, musician, retired schoolteacher, engineer, lawyer, and scientist. They stand in an area steeped in revolutionary histo-

Members of the Boston Bridge Brigade arrived at the Savin Hill overpass on the Southeast Expressway. They are not allowed to attach the panels to the bridge, so they developed a framing system to quickly assemble and display messages.

ry. General George Washington stationed Continental Army troops near Savin Hill during the Siege of Boston in 1775 to 1776. Today, the brigade embraces the “No Kings” mantra. And they are pretty upbeat. One demonstrator uses a long wand to launch bubbles, hoping they will hug the highway, but the wind blows them the wrong way. Sometimes things get vulgar. When one motorist gives a one-finger salute through his open sunroof, a demonstrator offers him a return gesture. But the detractors are far outnumbered by supporters, including from truckers. They blast their air horns in support. That’s been happening

more frequently since March, when nearly 200,000 immigrants were not able to renew their commercial driver’s li-

ported. Some say protesting salves their souls and ensures their sanity. “It helps me feel like I’m less helpless,” says Robin B. a local B&B owner who doesn’t give her last name. “It’s a place to bring your rage ... and then I can go the rest of the week, and I feel like I can still breathe.” Some of the 74 messages that the group has displayed: “TRUMP LIES ECONOMY DIES,” “DEMOCRACY NEEDS YOU NOW,” “STOP TRUMP DEFEND OUR CONSTITUTION,” “TINY HANDS GIANT BRIBES,” and “WORST PRESIDENT EVER.” But there are some Trump supporters who make sure their voices are being heard too.

Healey urges ‘federal action’ for guardrails on AI advancements

By Colin A. Young and Michael P. Norton
STATE HOUSE NEWS
As talk of the apocalypse fuels new calls to regulate artificial intelligence, Governor Maura Healey jumped into the debate Monday and said she wants to see “federal action to put guardrails on AI development before it’s too late.” In Massachusetts, House and Senate lawmakers have been negotiating for more than a month on economic development bills that include Senate-backed AI regulations. Any compromise the Legislature reaches would be sent to Healey’s desk for her signature, but she has not proposed her own set of AI regulations for the state. The leaders of three major AI platforms — Dario Amodei of Anthropic, Sam Altman of OpenAI, and Elon Musk of x.AI — agreed this weekend that the advancement of so-called frontier AI models should be slowed down “so that risk prevention has time to keep up,” as Amodei wrote in a blog post. One former Anthropic researcher said “there is a strong chance that we could all die in the immediate future” if these most advanced models continue to evolve at their current pace. Democratic Governors Wes Moore of Maryland and Josh Stein of North Carolina and Republican Governors Phil Scott of Vermont and Kevin Stitt of Oklahoma sat for a bipartisan interview with Shannon Bream of Fox News Sunday during a visit to Boston’s Old State House last week. During the interview, Scott said AI protections are needed. “I think the biggest fear is AI itself,” Scott said, according to the interview that aired Sunday morning. “And from my standpoint, I think this is an example of where we have to work together with the feds, the Congress, the states, in establishing a regulatory process that protects us from AI in the future. Because the horse is already out of the barn. I mean, AI is here.”

Governor Healey, pictured last week at the State House, called for “some guardrails around the [AI] space.”

Moore said governors “want to embrace the power of what we think technologies and AI can do.” “I think AI can be absolutely transformational when it comes to health care,” Moore said. “AI can be transformational when it comes to education and the democratization of education. I think all that is real. And we need guardrails. You know, this cannot be something that is being regulated from Washington and then dictated to our states because it’s our people that end up suffering the consequences of it.” Stein was skeptical that Congress would agree on AI legislation. “The feds should take the lead on this because it’s an industry of national scope, but none of us have any confidence in this Congress to solve the big problem,” Stein said. Last summer, Healey said she thought “there’s a general acknowledgment we’ve got to have some regulation in the space, some guardrails around the space,” and she said that she was glad Congress would take a look at it. “It doesn’t preclude the state from doing it. But, you know, right now, look, I’m less focused on regulation and more focused on implementation,” Healey responded when asked whether

that responsibility falls to states or the federal government. The US House of Representatives is expected this week to take up a bill dealing with oversight of the data centers that drive the AI boom, and Democratic lawmakers are circulating a letter calling on the White House to lead a global effort to set rules for AI safety ahead of President Trump’s upcoming summit with Chinese President Xi Jinping. Trump maintained Monday that his presence in the Oval Office should assuage any fears about AI. “The only control or ‘guardrails’ that AI needs is a STRONG AND SMART (High IQ!) PRESIDENT, and the U.S.A. has that, in spades!” Trump posted on social media. US Representative Lori Trahan is one of the chief sponsors of the bipartisan Frontier Risk Oversight, National Transparency, Independent Evaluation, and Reporting Act. That legislation seeks to lay out a national, risk-based framework governing the development and deployment of the most advanced AI models. It would create a national standard for transparency, auditing, and reporting of catastrophic risk “to prevent a patchwork of state regulations,” Trahan’s office said.

Wu to private sector: Hire our young people

► **JOBS**
Continued from Page B1
people starting Sept. 30.
“Our entire city is stronger and better off when our young people invest in themselves and get connected to our major employers,” Wu said during the press conference at New Horizons High School in Hyde Park. “We all benefit from a stronger, more skilled, more diverse pipeline of local talent.”

Boston has long supported employment opportunities for local youth through a summer jobs program and a separate initiative during the school year.

The school-year program provides young people with work that doesn’t interfere with their education and is intended to help them develop skills they’ll need in their careers. The jobs can also be a critical financial lifeline for families who depend on the income to cover daily expenses.

But last spring, city leaders cut most the school-year program in the face of soaring health care costs and declining property tax revenue. Funding fell from \$5.5 million last year to \$750,000 in the current city budget, according to Marcela Dwork, a mayoral spokesperson.

While the program has faced financial pressure in the past, local advocates said they never expected such a big cut. Hundreds of students and advocates demanded officials preserve the initiative.

Last spring, Wu called the prospect of cutting the school-year jobs an “incredibly difficult choice” after expanding the summer program that employs about 11,000 youth.

Wu said she has long priori-

PAT GREENHOUSE/GLOBE STAFF

Wu called the prospect of cutting the school-year jobs an “incredibly difficult choice” after expanding the summer program, which employs about 11,000 young people.

tized youth employment and more than doubled funding for the summer program from \$11 million to \$25 million over the past few years.

Since the budget cut, the administration has raised \$760,000 from private donors and has received a \$150,000 state grant for the school-year jobs program, Dwork said.

Boston has enough funding for 400 paid jobs in city agencies and 200 positions with stipends

for Boston Public School students and immigrant youth, she said.

Private employers have also agreed to hire 663 young people for the program, and donors have contributed enough money to pay for 340 jobs at local organizations, according to Dwork.

City Hall has looked to a number of organizations that have agreed to hire young workers or make a financial contribution to the program. The roster

includes the Boston Private Industry Council, the Greater Boston Chamber of Commerce Foundation, the Federal Reserve Bank of Boston, Suffolk Construction, State Street, and John Hancock.

Citizens Bank contributed \$25,000 grants to four local employers so they can hire local students, according to Lisa Murray, president of Citizens Bank Massachusetts. Murray praised the school-year program for giving

local young people develop confidence in their abilities and gain work experience.

“By providing students with real-world experience and meaningful connections,” Murray said, “it helps them build skills that will serve them wherever they decide to go in their career.”

Judge delays visa cap for international students

► **TRUMP**
Continued from Page B1
tem, violating the terms of their student visas, and making a mockery of our immigration laws? If the media really cared about legitimate international students, they would be thanking President Trump for cracking down on the rampant fraud to ensure only those truly intending to study in the United States are given the privilege,” the statement said.

The changes are the latest effort from the Trump administration to limit international student enrollment at American universities, of which the impact would be acutely felt in the Boston area.

Saylor noted that major research institutions often enrolled large percentages of international students, especially in graduate programs, and cited percentages of international graduate students at Boston-area universities: 28 percent of students at Boston University; 38 percent of students in Harvard’s Graduate School of Arts;

more than 40 percent at the Massachusetts Institute of Technology; and just over 56 percent at Northeastern University.

In its lawsuit, higher education leaders said the change would decimate doctoral studies in particular, they said, as PhD programs take over five years to complete on average, according to the National Science Foundation.

The plaintiffs, including the Presidents’ Alliance on Higher Education and Immigration and the Association of Independent Colleges and Universities in Massachusetts, asked for a judge to both overturn the change but also grant immediate relief ahead of the September deadline.

Saylor, who held a hearing on the request earlier this month, on Monday granted a preliminary injunction to postpone the rule change from taking effect.

The next court hearing is set for Oct 2.

The Presidents’ Alliance said in a statement the decision “recognizes the serious and irrepara-

ble harm this rule would cause to international students and scholars, higher education institutions, and communities across the country, as well as to the US economy, research and innovation.”

In response to the lawsuit, Brett Shumate, assistant attorney general for the Department of Justice, wrote the current system was archaic and needed to be overhauled to “safeguard national security,” in a 57-page filing.

Saylor acknowledged that the current system is “not without its problems.” But rather than make improvements, the government instead looked to “substantially restrict the overall number of foreign students, researchers, professors, and journalists in the United States.”

The rule change would require visa recipients to apply for an extension if needed, and give government officials the power to curtail the research of international students for no reason, Saylor said, without the ability to appeal decisions.

Not only would that inject a “high degree of uncertainty,” into the possibility of completing longer degree programs, but it would also offer political will to government employees.

“Moreover, it is not difficult to imagine how that system might be abused to punish those whose viewpoints or research are disfavored by the officials making the decision — or, indeed, punish disfavored institutions,” Saylor said.

Nearly 22,000 online public comments were submitted in response to the proposed rule, including letters from BU and MIT. Saylor noted the majority of comments “expressed strong opposition,” and that the government dismissed these opinions as “speculative.”

But even ahead of the proposed changes taking effect, international student enrollment is already declining at US universities.

The Common App, an admissions application platform for over 1,000 institutions, reported a 10 percent drop in internation-

al applications in the most recent admissions cycle. And applications for doctoral programs fell by 21 percent, according to a report from NAFSA: Association of International Educators, a plaintiff in the lawsuit.

For Massachusetts, a decline in international enrollment comes with a sharp economic downturn.

The NAFSA report predicted a \$284 million decline to the state economy, the third-highest deficit (tied with Michigan) in the country behind California and New York.

But Saylor said it was not his job to block a rule change that could bring “substantial and long-term damage upon the United States and its educational institutions.”

Instead, the role of the judicial system, he wrote, is to ensure that the government followed the law when imposing the changes.

Michaela Towefighi can be reached at michaela.towefighi@globe.com.

Thrown off by Trump’s Irish republicanism

► **CULLEN**
Continued from Page B1
committed to seeking a united Ireland, but few in that government think it’s a good time to vote on it, believing many years of reconciliation are needed first.

Trump’s latent Irish republicanism throw everybody for a loop. The Irish, in general, hate Trump. He is arguably the least popular American president in Ireland in history.

The king of England is more welcome in Ireland than Donald Trump.

It is quite a commentary on the current state of post-colonial Ireland that the prospect of eight years of President Trump is more upsetting than 800 years of subjugation.

In fairness, they love him in Doonbeg, the village where his golf resort is the biggest employer in the region — employing more people than the village’s population of 290.

Colum Eastwood, an Irish nationalist member of parliament from Northern Ireland, and an outspoken critic of Trump, posted Trump’s remarks on social media and wrote, “Always liked

him.”

Kemi Badenoch, leader of the Conservative Party in the UK didn’t see the humor.

“President Trump is shooting from the hip as usual, just like he did with Greenland and Canada becoming the 51st state,” he said. “This sort of loose talk about the future of democratic countries is deeply unhelpful and creates unnecessary tension.”

As if Trump cares.

Larry Donnelly, a Bostonian and nephew of Brian Donnelly, the late congressman from Dorchester who is beloved in Ireland for securing visas for thousands of Irish immigrants in the 1980s, moved to Ireland 25 years ago, making his life there as a law lecturer at the University of Galway.

Larry Donnelly, who wrote a book about being Irish-American in Ireland, saw Trump’s remarks about reunification not as a sop to Irish nationalists as much as a dig at the British government.

“I suspect he is furious with the UK about not supporting him on Iran and he also possibly has an eye on the ethnic Catholic vote ahead of the midterms,”

BRENDAN SMIALOWSKI / AFP VIA GETTY IMAGES

President Trump was shown on a video screen on the final day of the Irish Open tournament.

Donnelly said. “He also likes telling the audience what they want to hear. His speech was truly astonishing — not in a good way.”

Trump has actually helped the Irish economy by driving so many Americans to resettle there, to get away from him.

Some 10,000 Americans, including comedian Rosie O’Donnell, moved to Ireland last year, double the number from the year before, according to the Central Statistics Office data.

Trump’s second term has also

produced a surge in Americans seeking Irish citizenship. Some 18,910 Americans who have an Irish parent or grandparent applied for Irish citizenship in 2025, according to the Irish government. That’s a record, and more than double the 7,726 US citizens who sought an Irish passport in 2023.

While the Irish are loathe to admit it, Trump’s loathsomeness has been good for the Irish treasury.

The Irish are justifiably

proud of their tourist industry, with its mantra, “Céad míle fáilte,” which in the native tongue means “a hundred thousand welcomes.”

In Trump’s case, it was more like, “Ná lig don doras bualadh sa tóin ort,” which suggests he not let the door hit him on a certain part of his anatomy as he took his leave of Ireland.

Mass. joins lawsuit to prevent Trump rule

Benefits use may shape residency

By Nick Stoico

GLOBE STAFF

Attorney General Andrea Campbell said Monday she has joined a multistate lawsuit seeking to block the Trump administration from granting immigration officers broader discretion to consider a person’s use of public benefits when deciding whether they can become a permanent resident.

The rule, which is scheduled to take effect Friday, would allow immigration officials to consider an applicant’s use of nearly any means-tested public benefit, according to Campbell’s office. Officials could also consider some benefits legally received by an applicant’s family members, including US citizens, Campbell’s office said.

At the center of the debate is the concept of a “public charge,” which refers to a person considered likely to become primarily dependent on the government for long-term support.

The new rule would replace a 2022 policy that limited public charge determinations to people receiving cash income assistance or having long-term institutional care paid for by the government, according to Campbell’s office.

The coalition of 21 states’ attorneys general and the District of Columbia filed the suit in the US District Court for the Southern District of New York. Pennsylvania Governor Josh Shapiro also joined the lawsuit.

The coalition is asking the court to declare the rule unlawful and block it from taking effect, arguing that it significantly expands what immigration officials may consider without clearly defining which benefits, or how much use of them, could count against a green card applicant.

“Access to basic necessities like food, health care, and housing should never be used as a weapon against immigrants, and immigrants should never be forced to choose between getting the help they need while seeking permanent status in this country,” Campbell said in a statement.

The coalition argues that uncertainty surrounding the policy could cause immigrants and their families to leave or avoid public benefit programs they are eligible for.

In response to the lawsuit, a Department of Homeland Security spokesperson said the states are concerned about losing federal funding if immigrants leave public assistance programs.

“Let’s get this straight, sanctuary states are terrified they will lose federal funds because hundreds of thousands of illegals and noncitizens might remove themselves from American welfare programs,” the spokesperson said in a statement. “We’re shaking in our boots over this supposedly terrible outcome.”

Campbell’s office said the Department of Homeland Security estimates that the rule would reduce federal Medicaid and Children’s Health Insurance Program payments to states by about \$4 billion annually. SNAP payments could also decline by about \$1 billion per year, according to Campbell’s office.

The lawsuit argues that declining enrollment in government programs could also put pressure on hospitals and community health centers. Schools could also risk losing certification for free and reduced-price meals when SNAP and Medicaid enrollment drops, Campbell’s office said.

Lower SNAP participation could also reduce spending at grocery stores and other local businesses, the coalition argued.

“The Trump Administration’s new public charge rule threatens to punish immigrants for lawfully accessing public benefits,” Campbell said in the statement. “I will continue to hold them accountable for their unlawful actions and efforts to create fear and uncertainty around essential services while undermining the dignity of immigrants.”

Scaffolding, obscuring the Kennedy Center’s name, is still erected outside the venue.

Kennedy Center board to propose new options for honoring Trump as center confronts solvency worries

ASSOCIATED PRESS

The Kennedy Center Board of Trustees is planning to propose adding President Trump’s name to the facility’s exterior in recognition of his saving the building from its “precarious fiscal position,” according to a new court filing in a suit aimed at blocking the move.

It’s the latest development in the case revolving around adding the president’s name to the exterior of the cultural and arts facility that sits along the Potomac River in Washington and reflects the Trump-aligned board’s efforts to honor the president.

The new information came out of a court filing made by Democratic Representative Joyce Beatty of Ohio, an ex-officio member of the board. Beatty, who has led an effort to block Trump from putting his name on the building, said in a filing she was alerting the court to the proposal because it could implicate a pending decision before the court.

Both the court and the Kennedy Center board are expected to hold meetings Tuesday.

Beatty’s filing includes two exhibits. One is a draft vote to shut the center down, asserting the building is unsafe for occupancy. That assertion incorrectly cites a consulting group’s finding, “which expressly disclaimed providing any such opinion,” according to Beatty.

The other document asserts the center faces dire financial straits. It specifically calls for Trump’s name to be placed in marble beneath the name of the center on the building’s exterior. It offers 10 op-

tions for a possible inscription, including “Renovation and endowment overseen by President Donald J. Trump and the Trump Kennedy Center Fund.” Another proposes: “With Gratitude for Support from President Donald J. Trump and the Trump Kennedy Center Fund.”

“The Board understands that without such appropriate recognition it is unlikely that President Trump will provide the fundamental oversight of the renovation of the main building and lead the fiscal rescue of the Center,” the board wrote in the proposed resolution.

Trump has spent much of his second term reshaping Washington, demolishing the East Wing of the White House to make way for a ballroom and planning a triumphal arch near Arlington National Cemetery as well as a renovated golf course along the Potomac River.

The Kennedy Center has been a stumbling block in that effort after a judge ruled in May that Trump’s name was added to the building illegally, ordering it to be removed.

Trump and his allies, however, have continued to fight the ruling.

The board voted last month to inscribe his name on the venue’s facade to read “The John F. Kennedy Center for the Performing Arts Restored and Renovated By President Donald J. Trump.”

If the Trump Kennedy Center Fund reached \$100 million, another inscription would be added reading: “Endowed by the Trump Kennedy Center Fund.”

LOVE LETTERS

BY MEREDITH GOLDSTEIN

I missed my deadline again

An announcement: Love Letters is teaming up with Coolidge Corner Theatre for an event on Sept. 23. As part of the movie house’s “Science on Screen” program, we’ll show 1997’s “Romy and Michele’s High School Reunion,” a comedy about two fun friends — and life partners — who navigate the social politics of returning home.

Before the film, I’ll be in conversation with Brown University’s Oriel FeldmanHall, a professor of Cognitive and Psychological Sciences, who studies real-life social networks — and the skills it takes to gossip. It’ll all be relevant to the story.

You can buy tickets for the event, but we’re also giving away two pairs. To enter, send your own relationship question through our anonymous form at [Boston.com/LoveLetters](https://boston.com/LoveLetters) between now and Sept. 17 at 10 a.m. Winners will get a plus-one for a friend.

Remember, the best letters give some context (age range, the problem, some general details, etc.) We take letters about love, friendship, and all kinds of relationships.

Q. Hi Meredith,

I have written into your column and you have responded.

I think I wrote in 2022 — in the summer. It was about a long-distance relationship, and also about having feelings for a very good friend who’s across the country.

The long-distance relationship failed, and I set myself a deadline to tell my friend about my feelings.

The deadline was tonight and I still haven’t done it.

I guess my question is: Is it OK to take certain things to

the grave to not ruin a friendship? I feel like at this point, whenever I think about doing it and work up the courage, I talk to him and then talk myself out of it. I’m not sure why I can’t make myself tell him the truth about my feelings.

DEADLINES

A. You’re allowed to keep your feelings to yourself. There is no rule that says you have to share your thoughts and desires.

I do think you should consider whether this friendship is still a healthy one. If your bond with this person has turned you into someone who pines for a love that’s just out of reach, give yourself permission to take space. You can drift away from him and put your own needs first.

I say all of this because you wrote your letter in 2022 — and it’s 2026. These long-term feelings might be affecting your ability to have a relationship with someone new. Time off from a crush can be *so helpful*.

If you’re determined to get this out of your system — and can’t move past it without sharing your feelings — you can always confess in a letter. Talking in real life is preferable, of course, but some people are better in writing. You can say something like, “Hey, I’ve had feelings for you, on and off, for a long time, but I never know how to pursue them. I’m wondering how you feel, and if you’ve ever thought of me that way.”

Then you hit send — and let things play out naturally.

If the confession changes the friendship, that’s not so bad.

After all this time, you seem to want *something* to be different.

MEREDITH

READERS RESPOND:

If he hasn’t brought up the idea of taking the friendship into romance, it probably isn’t going to happen.

AUNTTIGGYWINK

I’m thinking that if you waited years and can’t make yourself tell your friend, deep down you probably know your feelings aren’t reciprocated. Plus, logistically it probably won’t work out. It’s not like you can just casually meet for coffee and see what happens. I think you should let this one go as something that wasn’t meant to be so you can look for someone else.

LEGALLYLIZ2017

It’s a friendship. Treat it as such and maybe talk less often. Good luck.

HIKERSKIERGIRL

This reminds me of that scene in Titanic where Rose is threatening to jump off the back of the boat, and Jack says, “No you won’t [because] you’d have done it already.” If you REALLY cared about the friend across the country, you would have met your deadline. In fact you wouldn’t even have set a deadline. You’d have done it already.

JIM501

The answer to the question you never ask will always be “no.”

Rapper says Kraft got him dropped from Sheeran tour

By Travis Andersen and Shannon Larson

GLOBE STAFF

Recording artist Macklemore said Monday that pop star Ed Sheeran dropped him from his current tour after the rapper’s recent onstage pro-Palestinian remarks allegedly drew a backlash from New England Patriots owner Robert Kraft.

The controversy began last week after Macklemore’s performance at New Jersey’s MetLife Stadium as part of Sheeran’s Loop Tour when he repeatedly said “Free Palestine.” The recording artist Pink later shared a social media post from an organization that criticized Macklemore’s comments. Some supporters of Israel have said the phrase “Free Palestine” is antisemitic.

In a lengthy social media post Monday, Macklemore said after the controversy erupted, Sheeran indicated that Kraft called him to say Macklemore “would not be allowed to perform” when the tour arrives at Gillette Stadium later this month.

“Last Monday, in the middle of all the media attention surrounding Pink and what I said at MetLife, Ed told me that Robert Kraft called him,” Macklemore wrote on social media.

He said that Sheeran indicated that Kraft “said I would not be allowed to perform in his stadium” when the tour swings through Gillette on Sept. 25-26.

“Ed also told me that Kraft had rallied some of the other stadium owners and collectively they gave him an ultimatum,” Macklemore wrote. “If Macklemore stays on the tour, you will not be able to play in our venues.”

In a lengthy statement provided to the Globe, Kraft did not dispute Macklemore’s assertions. A staunch supporter of Israel, Kraft launched a foundation to combat the rise of antisemitism worldwide in 2019.

“Much of my time and attention for the last decade has been focused on the fight against antisemitism and hate of all kinds, and I feel a responsibility to stand up when I believe that line has been crossed,” he said. He said Gillette is committed to ensuring events “do not provide a platform for hate speech.”

The Patriots owners said the decision was made to bar Macklemore from performing at Gillette as a result of the rapper’s “recent actions” and “material shared from the stage” during Sheeran’s shows in New Jersey.

He also referenced “a broader history of antisemitic rhetoric and imagery” — appearing to allude to an incident in 2014 during which Macklemore wore a costume onstage that critics said resembled a caricature of a Jewish man. He later apologized and said it was never his intention to cause offense.

Kraft said “advocacy should not come at the expense of the Jewish community or obscure the responsibility of Hamas,” the Palestinian militant group that launched an attack on Israel on Oct. 7, 2023.

“This decision is not about diminishing the suffering of innocent Palestinians or denying anyone the right to advocate on their behalf. Their pain and loss are real,” he said. “I agree with Macklemore. Too many lives have been lost and there has been too much suffering, but only sharing selective information and ignoring the actions of Hamas is not honest and only advances more divisiveness and hate.”

Kraft said he would “welcome the opportunity” to have a conversation with Macklemore. Representatives for Sheeran did not immediately respond to a request for comment.

Messina Touring Group, the promoter of the US leg of Sheeran’s global tour, said in a statement provided to Rolling Stone that Macklemore was off the remaining American dates.

“As the concert promoter for Ed Sheeran’s U.S. Loop Tour, we have been notified by venues on the upcoming U.S. tour dates that they will not allow a concert to take place with Macklemore on the lineup, which would result in the cancellation of the tour and impact hundreds of thousands of fans,” the company told Rolling Stone. “After discussions with stakeholders, Macklemore will not be performing on the remaining support dates.”

Over the weekend, Pink said on Instagram that she had “reposted somebody else’s post about Macklemore’s set at Ed Sheeran’s show. It said things in words I didn’t write, and I wouldn’t have chosen all of them.”

She wrote that “Hamas is a terrorist organization. Palestinians deserve a future that honors their humanity and their aspirations. Protecting innocent life comes first, everywhere, and nobody should ever celebrate the death of a child. Anybody’s child.”

In his statement Monday, Macklemore said antisemitism “is real” but pushed back against what he said were attempts to conflate any criticism of the Israeli government with bigotry against Jewish people.

In addition, he said Sheeran had told him the phrase “Free Palestine” and the image of the Palestinian flag were hurtful to people the pop star had spoken with.

“I told him that if those words were more offensive than tens of thousands of Palestinian children being killed by Israel, then there was a fundamental disconnect between where those people stood and where I stood,” Macklemore said.

‘Widow’s Bay,’ ‘The Pitt’ win at Emmys

By Matt Juul and Lisa Weidenfeld

GLOBE STAFF

TV’s biggest night returned, as the 78th Prime-time Emmy Awards arrived Monday to honor the industry’s top stars and shows.

Airing live from the Peacock Theater in Los Angeles, the ceremony was hosted for the first time this year by Mariska Hargitay. The “Law & Order: Special Victims Unit” actress recently won a pair of Emmys during the earlier two-day awards event (previously called the Creative Arts Emmy Awards), held Sept. 5-6. “My Mom Jayne,” Hargitay’s documentary about her mother, the actress Jayne Mansfield, won for outstanding documentary or nonfiction special and outstanding directing for a documentary/nonfiction program.

Hargitay opened the ceremony with a pre-taped bit in which she complained about the pressure of hosting, only to reveal that she was complaining to New York Knicks star Jalen Brunson, who seemed unimpressed with her concerns. The segment segued to a spoof song set to the tune of Joan Jett’s “I Love Rock ‘n’ Roll,” with the phrase “I Love TV screens” subbed in. The performance featured cameos from Jeff Hiller of “Widow’s Bay,” Jean Smart of “Hacks,” and Norwell native Jennifer Coolidge.

Hargitay’s opening monologue leaned heavily on jokes about her long-running crime drama, with the host joking that she recognized everyone in the crowd for playing people she’d arrested on the show. The longevity of “SVU” came in for some jokes as well, with Hargitay pretending she didn’t know how to pronounce the word finale since she’d never had one, and honoring network NBC for hitting 100 years, which was how long, she joked, the show has been on.

Burlington native Amy Poehler presented the first award of the night, for supporting actress in a comedy series. The winner was heavy favorite Kate O’Flynn of “Widow’s Bay,” whose perpetually put-upon Patricia spoke to many of the horror comedy’s fans. O’Flynn, who won for her first nomination, honored “all the Patricias out there.” Her costar, Stephen Root, later took home the award for best supporting actor for his work on the show as well. He made a point of saying “the reason I’m up here is Katie Dippold, Katie Dippold, and Katie Dippold,” a reference to the show’s creator, who also wrote the Boston-set comedy “The Heat.”

The show’s star, Matthew Rhys, made Emmy history as the first actor to win two lead acting categories in the same year, for “Widow’s Bay” and for his role in the limited series “The Beast in Me” earlier in the evening. He thanked Dippold and Hiro Murai, an executive producer and the director of half of the episodes of the series, as well as his agents, the cast and crew, the country of Wales, his sister, and “My parents — they just kicked me onto a stage from a very young age.” Murai would also win an Emmy for his directing on the show.

Dippold also won her own Emmy for her writing on the show. She said that while she’d promised that she’d stay humble if she won, that was no

Sally Field won the Emmy for lead actress in a limited or anthology series or movie for “Remarkably Bright Creatures.”

The winners

A list of winners at the 78th Prime-time Emmy Awards Monday night.

- Drama series:** “The Pitt” (HBO Max)
Comedy series: “Widow’s Bay” (Apple TV)
Limited or anthology series: “DTF St. Louis” (HBO Max)
Lead actress in a drama series: Rhea Seehorn, “Pluribus”
Lead actor in a drama series: Noah Wyle, “The Pitt”
Supporting actress in a drama series: Allison Janney, “The Diplomat”
Supporting actor in a drama series: Tom Pelphrey, “Task”
Lead actor in a comedy series: Matthew Rhys, “Widow’s Bay”
Lead actress in a comedy series: Jean Smart, “Hacks”
Supporting actress in a comedy series: Kate O’Flynn, “Widow’s Bay”
Supporting actor in a comedy series: Stephen Root, “Widow’s Bay”
Lead actress in a limited or anthology series or movie: Sally Field, “Remarkably Bright Creatures”
Lead actor in a limited or anthology series or movie: Matthew Rhys, “The Beast in Me”
Variety series: “The Late Show With Stephen Colbert” (CBS)
Reality competition program: “The Traitors” (Peacock)
Host for a reality/competition program: Alan Cumming, “The Traitors”
Directing for a drama series: Saul Metzstein, “Slow Horses” (“Scars”)
Directing for a comedy series: Hiro Murai, “Widow’s Bay” (“Welcome to Widow’s Bay!”)
Writing for a drama series: Vince Gilligan, “Pluribus” (“We Is Us”)
Writing for a comedy series: Katie Dippold, “Widow’s Bay” (“Welcome to Widow’s Bay!”)
Bob Hope Humanitarian Award: Michael J. Fox

Matthew Rhys won the award for lead actor in a comedy series for “Widow’s Bay” and lead actor in a limited or anthology series or movie for “The Beast in Me.”

longer the case. Guests would be unable to “step foot in my home without seeing this thing” thanks to a “system of mirrors” to keep the trophy perpetually in their eyeline. She thanked Murai and the “brilliant” Matthew Rhys, joked that his Welsh accent was fake, and said that winning the award was “going to become my entire personality now.”

The series capped off the night with the Emmy for best comedy. “I have to thank my mom for always making Halloween fun,” Dippold said.

Jean Smart won her fifth Emmy for her work as a lead actress in a comedy for “Hacks,” for which she received a standing ovation. She joked that the women, in particular, should be allowed to sit down due to their uncomfortable dresses and shoes, and implied that people were thinking, “She’s not that good. You just stood up because she’s old.”

After a very funny intro from comedian John Mulaney about how men had been “historically unrepresented” on television, Noah Wyle took home the award for the second year in a row for best actor in a drama on “The Pitt.” “I grew up in LA, I’m a Hollywood kid,” he said. “This is the only club I’ve ever wanted to join. Thank you for accepting me.”

“The Pitt” went on to win the Emmy for best drama, and co-creator R. Scott Gemmill accepted the award on behalf of the show. “We are so blessed to have the most talented and passionate cast and crew,” he said. “We are so blessed to live in this

community.” The series is known for its realistic depiction of a hectic city hospital emergency room, and Gemmill encouraged everyone in the room to keep “telling honest stories.”

“People need to know the truth, and we need to continue to tell them that in whatever form we can,” he said.

“Widow’s Bay” won eight Emmys during the earlier ceremonies, with Betty Gilpin taking home the award for outstanding guest actress in a comedy series. Boston Casting’s Angela Peri and Lisa Lobel also earned their first Emmys, with the local casting company winning earlier in the month as part of the “Widow’s Bay” team nominated for outstanding casting for a comedy series.

“Boston Casting is thrilled to bring home the Emmy,” Peri and Lobel said in a statement to the Globe. “We are especially proud of the incredible local actors, who helped create the authentic feeling of a quirky island community off the coast of New England. This Emmy belongs to them, too!”

Julianne Margulies presented her “The Good Wife” costar Michael J. Fox with the 2026 Bob Hope Humanitarian Award for his advocacy and contributions to Parkinson’s disease research. Fox gave a speech about Bob Hope’s status as an inspirational figure for Fox’s own charitable work. Later in the show, Sally Field and Reba McEntire honored the late Dolly Parton, with the latter performing Parton’s “Appalachian Memories.” The inaugural Legacy Award, a new-

THE BOSTON GLOBE TUESDAY, SEPTEMBER 15, 2026 | BOSTONGLOBE.COM/SPORTS

DAVID L. RYAN/GLOBE STAFF

Romeo Doubs had a prominent drop and zero catches in his Patriots debut, but both he and coach Mike Vrabel see better days ahead.

They won't be thrown off

Patriots' wide receivers ready to move up in rotation with Brown on the sidelines

By Christopher Price
GLOBE STAFF

FOXBOROUGH — The corner of the Patriots' locker room that's occupied by the wide receivers was a busy neighborhood Monday afternoon.

In the wake of A.J. Brown being placed on injured reserve, reporters were interested in talking with DeMario Douglas, Kyle Williams, and any other pass catcher hanging out before practice about how things might change for them without Brown in the lineup.

"One man down is the next man up," said Williams. "I think that's everybody's mentality in *every* room. We've just got to keep approaching how we've been approaching it, from the spring all the way up until now. Hopefully, nothing really changes."

Going into the opener against the Seahawks, the 6-foot-1-inch, 226-pound Brown was undoubtedly the premier receiver on the depth

chart, followed by Romeo Doubs, Mack Hollins, Douglas, Williams, and Efton Chism. Now, with Brown out for the foreseeable future with a high-ankle sprain, his absence will be a test of depth and versatility that figures to affect every receiver on the roster.

"We're trying to install here and [put] guys in spots that are best for them and best for us," said coach Mike Vrabel. "And so, I don't know how much we want to tweak things. We'll go through our game plan, and just like we did when A.J. was out there — sometimes he was the X [receiver], sometimes he was the F, the Z. You know what I mean? We'll have to move guys around to different positions."

One player who will certainly be asked to do more is Doubs, a boundary presence with a relatively similar skill set and frame. With zero catches on three targets and one ill-timed drop, Doubs had a rough start to his Patriots career. But that

hasn't shaken Vrabel's faith in the 6-2, 210-pounder.

"He dropped a pass," Vrabel said with a shrug. "Everybody's dropped a pass. Everybody misses a tackle. You talk to him the same way you always talk to him; figure out a way to make a play to help us win. And he did a lot of great things during camp, just like everybody did, so I know he's excited to get back out there and get to work and to help find a way to help us win."

Williams also could see more opportunities. The second-year receiver, who played 12 offensive snaps in the opener, doesn't have the same frame as Brown — he's 5-11, 190 pounds — but as a boundary receiver, he has the speed that makes him capable of big plays.

While Williams wasn't targeted Wednesday, Vrabel sounded optimistic about his potential usage moving forward.

PATRIOTS, Page C4

Patriots need to fix their offense and fast

BEN VOLIN
ON FOOTBALL

The Patriots' offense was one of the biggest disappointments of Week 1, scoring just 10 points and gaining 277 yards despite adding A.J. Brown and Romeo Doubs.

They'd better fix it quickly, because the rest of the NFL is ready to run a track meet.

There was an offensive explosion in Week 1, with 11 teams cracking 30 points. Ben Johnson and the Bears led the way with 59 against the Panthers, tying the 2019 Ravens for the second-most points in Week 1 since the 1970 merger. (The 1973

Falcons scored 62.) The Panthers scored 37 points in defeat, making the Bears the first team to score 50 and allow 30 in a season opener.

The Ravens put up 41 points in a blowout win over the Colts. The Vikings scored 39 with backup quarterback Carson Wentz. The Bills scored 36 against the stingy Texans' defense in their first game with Joe Brady as head coach. The Jaguars, Bengals, Texans, Lions, Saints, and Chiefs also lit up the scoreboard.

With Monday's 31-10 scoreline between Kansas City and the Broncos, Week 1 matched the 2012 season for the highest-scoring Week 1 since the merger at 49.4 points/

Dispatches from Week 1 on the high school gridiron

MATT PORTER
ON HIGH SCHOOLS

In the first two nights of the high school football season, I attended three games, driving 160 miles over five hours, to take in the scene surrounding six of the teams in the Globe's preseason Top 20 rankings.

Notes from the road:

- Quarterbacks always draw the most attention. This season, it seems warranted. Sure, there are plenty of talented players around here. For example, Catholic Memorial's game-wrecking defensive tackle Kennedy Hurte-Jones has to be used to seeing shocked faces when he tells people he is a sophomore. The scouts at Rivals think he is the

best player in the class of 2029 in Massachusetts.

But there are a bunch of stand-out QBs worth watching. Week 1's must-see performance came from Xaverian's Will Wood, the Penn State commit who is gunning for a fourth Division 1 state title (and third as a starter).

He made his senior debut in Westwood on Friday against No. 11 Bishop Feehan, in front of a rabid student section, behind a massive offensive line, after a Sept. 11 fly-over from a Massachusetts State Police helicopter.

Some quarterbacks have talent but lack presence. Wood carries himself like The Man, radiating calm and peppering his teammates with encouraging words. "Let's do it

again!" he told his offense with a grin after Feehan's Xavier Baker raced 80 yards for a second-quarter touchdown. His six touchdowns — five through the air, and a 10-yard strike in overtime — gave the Hawks the 42-36 win. His rushing touchdown saw him barrel in from 20 yards out while dragging two defenders over the line.

- Some of the top QBs in the area — Wood, St. John's Prep's Chris Vargas, Tabor Academy's Peter Bourque, Central Catholic's Caden Smith, and others — have this in common: they train with former Bridgewater State standout Mike McCarthy. All of them say it has made them sharper.

"They're great players," said Smith, a Bentley commit from Sa-

lem, N.H. "Every day's a competition on that field. We're on time, we're scheduled. We're throwing it all over the yard. Vargas, Wood, Bourque — every single session you're at, there's someone better than you. But I'm a Smith. I'm a competitor. Every day I challenge myself to elevate."

The dual-threat Smith was the star of fourth-ranked Central Catholic's 34-0 win over BC High on Friday in Lawrence. The Raiders showed a rebuilding squad no mercy.

"We said before the game: Take 'em into deep water, make 'em tread it," Smith said. "They can't stay in the deep water with us."

It was a tuneup for Friday's

HIGH SCHOOL FOOTBALL, Page C5

Teams look to avoid fall from grace

Do September results matter in the postseason?

By Alex Speier
GLOBE STAFF

For much of September, the Red Sox have looked like an Olympic speedskater in a qualifying heat, pacing themselves toward the finish line while holding something in reserve for the more important competition that remains.

Their playoff position as the second wild-card seed — destined to go on the road to play the top wild-card seed, likely the Yankees — was all but locked in entering the month. The Sox have focused largely on forging the best version of their roster for the playoffs and ensuring the health of as many players as possible, rather than short-term gain.

Whitlock wouldn't mind starting. C2

With that, on-field performance has been unspectacular. Despite a four-game sweep in Baltimore, the Sox have appeared sluggish at times in forging a 4-5 home record against three sub-.500 teams (the Mariners, Angels, and Royals) who were circling the drain.

Does it matter? Does the way a team finishes the regular season have implications for the postseason?

World Series winners have typically excelled on October's doorstep, with the 121 champions posting a collective .629 winning percentage from Sept. 1 through the end of the regular season. (Any regular-season October games are treated as "September" games in this context.) Only 10 World Series winners had sub-.500 records in September, most recently the 2015 Royals.

However, that excellence largely mirrored what they'd done throughout the year, with World Series winners possessing a combined .619 winning percentage over their full championship seasons.

Under the current playoff format featuring a 12-team playoff field with a best-of-three Wild Card Series that was introduced in 2022, the four

Hagens now the center of attention

Sweeney mulls shift after prospect's four-goal game

BUFFALO — Rookie tournaments offer an opportunity for kids to catch eyes, maybe grab a coveted training camp invite, and ideally inch up a rung or two on the NHL career ladder.

James Hagens, ordained the top prospect in the Bruins' franchise the day he was drafted in 2025, looks to have done more than that Monday with a one-man Brother Love Goal-Scoring Show. The former Boston College Eagle potted four, including the overtime winner, in a 4-3 win over Sabres hopefuls at the LECOM Harborcenter.

Hagens's tour de force, which brought his two-game total to six goals in the two-day mini-tourney, left general manager Don Sweeney thinking ahead to his club's main training camp that is about to open and how Hagens, the 19-year-old rising wunderkind, could factor into immediate plans.

"We might have to look at him at center," was Sweeney's matter-of-fact assessment, the GM particularly impressed with Hagens's sharp, accurate wrist shot, which he used to nail in all four goals. "Maybe that's where we use him."

Sweeney's comments came after Hagens's third goal of the day — a hat trick rattled off in a span of 4:29 — lifted coach Trent Whitfield's Wanna-B's into a 3-2 lead early in the third period. Then came Hagens's OT goal, giving Sweeney even more proof that the center spot might be the right fit for the left-shooting Hagens.

For anyone late to the protracted "Where will Hagens play?" discussion, the working assumption

Garrett Whitlock sees how his friend Griffin Jax of the Rays has converted from reliever to starter and believes he can do the same.

Starting slot appeals to Whitlock

By Tim Healey
GLOBE STAFF

Now is not the time, of course, what with the Red Sox in a playoff push and all.

But deep down inside, in a maybe-one-day-eventually sort of way, **Garrett Whitlock** harbors aspirations to try again to be a starting pitcher, to return to the rotation.

Consider it a curiosity.

“I definitely know my body better and know everything better now, and so it’s definitely something I’d be open to. Will I?” Whitlock said. “I’m not going to walk into [chief baseball officer **Craig Breslow’s**] office and be like, ‘Hey, I’m starting.’ So it’s one of those things where the team would have to be on board with it and just talk through everything and go through it. But it’s something I’d always be open to.”

Whitlock is intrigued enough to have picked the brain in recent months of **Griffin Jax**, the right-hander whom the Rays converted from reliever to starter this season.

Jax, 31, had an 8.00 ERA in 11 relief appearances, moved to the rotation in April, slowly built up his pitch count, and has a 3.59 ERA in 20 starts.

Whitlock and Jax became buddies when they played together for Team USA during the World Baseball Classic in March. They’ve texted about what amounts to an experiment for Jax.

Jax’s take, per Whitlock: Everything he learned in his years as a reliever, several as a high-end reliever, made him a better pitcher, regardless of role. Tweaks to his repertoire, knowing how to attack hitters, and ensuring his body recovers between outings — it all applies to being a starter.

Head to head: This is the second of two series. The Red Sox won two of three back on June 12-14 at Fenway Park.

Miscellany: Rangers outfielder Brandon Nimmo entered Monday second in the American League with 33 doubles. He trails only the Red Sox’ Wilyer Abreu (36) . . . Texas closer Jacob Latz has 29 saves, sixth most in the AL entering Monday . . . Texas has made the fewest errors (64) in the AL.

Whitlock has had similar conversations with the Cubs’ **Clay Holmes**, another Team USA teammate. He made the switch last year.

“We all joke that we’re all failed starters,” Whitlock said of his bullpen brethren.

Take it from the Royals’ **Seth Lugo**, who beat the Red Sox on Friday.

He and Whitlock have had very similar career arcs: They reached the majors in their mid-20s as non-elite prospects, bounced between the bullpen and rotation based on team need and their performance, and accepted their club wanting them in a relief role. They were excellent at it.

All along, Lugo, a consummate pro and good employee in his years as a Mets reliever, said he wanted to

AL wild card

	W	L	Pct.	GB
p-New York	87	63	.580	—

* — Not including late game				

give starting another go — someday. Now, he is in his fourth season and third contract since getting the chance — once he became a free agent — and turning it into a successful and lucrative second act.

“It’s not as daunting as it seems,” Lugo said at Fenway Park over the weekend. “What happens is you first get to the big leagues and you try to be someone that you’re not, just from other influences, other recommendations. But you [learn] how to get guys out [as a reliever].”

“Once you make the switch back, you have the confidence. The problems you had earlier in your career, [which] sent you to the ‘pen in the first place — you’re aware why those mistakes happened.”

Lugo, like Whitlock, was a late-innings arm. He faced the other team’s best hitters in some of the most important moments of the game.

“Once you have success pitching the seventh, eighth, ninth inning, the first six innings become a lot easier,” he said. “As a reliever, when you’re going into a game, you’re a lot more stressed out than you are as a starter. So you start to recognize what you’re good at, how you can get out of those situations.”

Whitlock, who possesses a 1.81 ERA in 51 relief appearances this year, last made more than a handful

of starts in 2023. Since then, he ditched the four-seam fastball to lean even more on his sinker, went with a slider instead of a sweeper, and changed his changeup, which has become highly effective.

In discussing the possibility, Whitlock is a realist: The Sox’ rotation seems full for the foreseeable future.

His contract includes team options for 2027 (\$8.25 million) and 2028 (\$10.5 million). Those are good deals for an elite reliever — and a really good deal for even a serviceable starter.

“I doubt Boston will do it. We’re pretty good on starting depth,” Whitlock said. “If I become a free agent and a team approaches me about it, I’m open to it and see how it goes.”

Perez on Abreu

Royals icon and Venezuela captain **Salvador Perez**, witness to **Wilyer Abreu’s** WBC star turn, is a big fan — and a big believer of Abreu on a big stage. “He’s going to be the MVP if Boston makes it to the World Series,” Perez said. “He’s built for a moment like that.” . . . Early returns on **Adley Rutschman’s** cortisone shot last week, intended to alleviate pain in his right elbow, are solid. Against Kansas City, he went 3 for 10 with a double, as many walks as strikeouts (two) — and played three games in a row for the first time since getting hurt. “It definitely helped a lot,” interim manager **Chad Tracy** said. “You can tell his body language and stuff too, he looks and feels pretty good.” . . . **Garrett Crochet’s** bullpen session Tuesday is scheduled for 30 pitches across two simulated innings, a step up from previous shorter sessions.

Tim Healey can be reached at timothy.healey@globe.com.

Does September momentum help come October?

► **RED SOX**
Continued from Page C1

World Series winners had a collective .577 winning percentage in September — a step down from the quartet’s .597 during the regular season.

However, that number is dragged down by the 2023 Rangers, the only team of that foursome whose winning percentage in September was worse than the rest of the season.

What about the broader playoff field? Teams reaching the playoffs in the expanded format had a .572 winning percentage in the regular season, and a .585 in September. On the whole, their September performance was roughly in line with the rest of their season.

Still, there are individual cases of teams dominating or stumbling to the regular-season’s finish line. Those teams largely offer a reminder that the playoffs represent a reset for the season, and that there’s little to suggest that a team needs to be peaking in September in order to excel in October.

Take the two most extreme examples. Last year, the Guardians went on an epic 20-7 run (.741) down the stretch to win the American League Central when the Tigers collapsed (7-17, .292) and backed into the playoffs as the lowest wild-card seed. Those teams then met in a Wild Card Series in Cleveland. The Tigers won, then pushed the Mariners to the limit of a best-of-five Division Series.

They’re not alone. Of the five playoff qualifiers under the current format that had sub-.500 September records, four won their first playoff series (three in the Wild Card Series, one in the Division Series).

That’s not to say that it’s “bad” to play well entering the playoffs. Of the five teams that had the best September records under the current playoff format, only those 2025 Guardians lost their first postseason series.

There’s simply not a clear correlation between September performance and what a team eventually does in the playoffs. Rosters, and roster management, change significantly, in ways that turn the playoffs into a different test.

So, do the Red Sox need to care about how they play in September so long as they get into the playoffs?

“Yes and no,” said Red Sox outfielder Jahmai Jones, who was part of those 2025 Tigers. “Obviously, winning’s better than losing. You want to win as many games as you possibly can, especially heading into September or into October. But, at the end of the day, [the 2025 Tigers] were a great example last year of it, where we didn’t have our best month [in September], and then we come out and we’re one at-bat away from advancing to the [ALCS].”

“Obviously, everybody wants to win every single game that we go out there [for], so that’s what we’re focused on right now. If you start to get rolling at the right time, I think you can roll that momentum into the playoffs. But at the same time, we’re all trying to get to the dance, and it doesn’t matter how you get there.

“You’ve just got to get there, and then once you’re there, you can start playing your game.”

Alex Speier can be reached at alex.speier@globe.com. Follow him @alexspeier.

2025 FILE/MATTHEW J. LEE/GLOBE STAFF

Jahmai Jones, whose Tigers went 7-17 last September before a strong playoff showing, kept it simple: ‘Winning’s better than losing.’

Four-goal game by Hagens may shift Sweeney’s plans

► **ON HOCKEY**
Continued from Page C1

tion has been that left wing would be his starting point if he indeed is on the roster for the Sept. 29 season opener.

In a recent interview with the Globe, coach Marco Sturm said he was leaning toward Hagens taking up on the wing again, which is where he spent his five games (including three in the playoffs) after turning pro last spring.

Sturm, noting he was duly impressed with Hagens in that small sample size, said he did not see the rookie fully employ his offensive instincts. The tiny delay in reaction time, between thought vs. instinct, had the coach thinking more time on the wing would benefit the rookie’s developmental timeline.

All of which may still be the case when Hagens rejoins the veteran squad Thursday for its first skate. Hitting for the cycle here was impressive. Yet it doesn’t necessarily mean Sturm will rearrange the trio alignments he has scribbled on his white board, even if Sweeney grows more convinced by what he saw here.

His is a franchise, remember, desperate for a No. 1 center to lead the offense. That’s not going to be the somewhat spindly, 177-pound Hagens right here, right now. Frankly, Fraser Minten at this hour would be the lead candidate to morph the fastest into that role, based on his impressive 2025-26 season. But that looks to be a year or two away, and there is no guarantee he’ll ever be that guy.

It’s just that Minten’s impressive rookie performance over a full NHL season has to be given more weight than a six-pack bagged in a tourney of hopeful young’ns.

“To be honest, I was just excited to be out there playing hockey,” said Hagens, asked about Sturm’s assessment of his play from last season. “Being able to get there for the playoffs was a dream come true for me — one of the coolest moments in my entire hockey career. So it was more taking it all in, going out there, not overcomplicating anything — try to trust yourself and trust your teammates.”

Those words are smart, prudent, and also right from the standard rookie playbook. Could he be expected to bel-

FILE/JONATHAN WIGGS GLOBE /STAFF

James Hagens (left) is only 19 and has played just five NHL games.

low, “Tell Sturmy to get me that David Pastrnak on my right wing, STAT! And gimme Geeks on the left.”

If only, right?

For this hour, and many more to

come, Hagens will follow whatever lead the front office and the guy behind the bench dictate. It was actually out of character for Sweeney to so much as hint of using Hagens, a center since his

middle-school days, at his natural position.

We’ve learned to receive these hints from the GM like they’re manhole covers tossed from the top of the Hancock tower. We’ll see shortly if the hint leaves a dent in the road.

Worth noting, of course, is that the franchise has reason to be predisposed to starting talented young centers on the wing. It’s where Patrice Bergeron hung out at the start of his days in Black and Gold and, come November, a plaque with his likeness on it will be hung in the Hockey Hall of Fame.

The inscription is expected to reference that he grew to be the top two-way center of his era, and that, yeah, he scored some goals — 427, to be exact.

What defined Bergeron, though, was how he mastered the art, similar to how Roger Federer mastered the tennis court. Putting points up on the board is essential, but only part of a much bigger picture.

We’ll see this week how that picture begins to fill in for Hagens.

Team rec. — Record in games started by pitcher this season

Aaron Judge hit his first home run since May 24 as the Yankees clinched their record 61st postseason berth and ninth in 10 years on Monday night.

NOTEBOOK **Spencer Jones** was batting with two outs in the eighth inning of an 8-3 win against Minnesota in Minneapolis when Toronto lost to Detroit, assuring the Yankees of at least an AL wild card berth

Judge, who returned last week after missing more than three months because of a fractured rib, hit a three-run homer off **A.J. Minter** earlier in the six-run eighth to give the Yankees a 7-2 lead. Before the homer, the Yankees captain had been 3 for 20 with 11 strikeouts since returning.

New York began the night four games behind AL East leader Tampa Bay, which clinched a postseason berth on Friday.

Dodgers' playoff streak at 14

The Dodgers clinched their 14th consecutive playoff berth with a 4-1 win over the Reds in Cincinnati behind **Tarik Skubal's** seven shutout innings and home runs by **Kyle Tucker** and **Teoscar Hernández**.

Los Angeles tied the record set by Atlanta from 1991 through 2005.

The two-time defending World Series champions cut their magic number to three for a fifth straight NL West title and 13th in 14 seasons. The Dodgers and Yankees made it four teams assured of playoff spots after Milwaukee and Tampa Bay.

NFL NOTEBOOK

Walker, Mahomes help Chiefs return to glory

ASSOCIATED PRESS

Kenneth Walker III ran for 173 yards and scored two touchdowns in his Chiefs debut, stealing some of the spotlight from **Patrick Mahomes** and his surgically repaired left knee, and Kansas City exacted some revenge on the Broncos for stealing their AFC West crown with a 31-10 home victory Monday night.

Mahomes didn't appear to be affected by the knee, or the brace he wore on it, throwing for 184 yards and two scores. He erased any doubts when he capped the Chiefs' opening drive with a 15-yard touchdown run.

Walker carried 23 times to finish with the most yards rushing by a Chiefs player since **Jamaal Charles** ran for 226 against the Colts in 2012, the year before **Andy Reid** became their coach.

The Broncos, meanwhile, were abysmal on offense in their first game with coordinator **Davis Webb** calling the plays.

Bo Nix threw for 131 yards with an interception and a lost fumble, and the Broncos finished with 176 yards of offense. Wide receiver **Jaylen Waddle** had one catch for 2 yards, while **Evan Enggram** led the Broncos with four catches for 43 yards and their lone TD.

Porter's status unknown

Mike McCarthy is pretty much over talking about **Joey Porter Jr.**'s back and his contract situation. Until one or the other is resolved — having both go away seems unlikely in the short term — the Steelers coach might have to.

While McCarthy's debut for his hometown team was largely successful in a 20-13 victory against injury-ravaged Atlanta, Porter's uncertain status and the attention it is getting could end McCarthy's honeymoon period sooner rather than later.

The club opted to make Porter inactive Sunday, a decision McCarthy called his and his alone, as the fourth-year pro continues to recover from a back injury that forced him to miss a big chunk of training camp, all of it set against the backdrop of stalled contract negotiations that seem destined to drag into next offseason.

The Steelers had little trouble without one of the league's top defensive backs against third-string Atlanta quarterback **Cooper Rush**, though the challenge will ramp up considerably over the next two weeks against the Patriots and Cincinnati.

McCarthy has repeatedly described the nature of Porter's work since being

activated off the physically unable to perform list two weeks ago as a "ramp-up" period. He also said he was "impressed" while watching Porter up close last Thursday. He just didn't see enough, it seems, to feel Porter was one of the 48 best players available.

Day by day for QB Murray

Vikings quarterback **Kyler Murray** began the week in the NFL concussion protocol, continuing his recovery from an illegal hit to the head that forced him out of his first game with the team in the first quarter.

Murray arrived Monday at Vikings headquarters "feeling pretty good," according to coach **Kevin O'Connell**, but it was far too soon to assess his chance of playing Sunday at Chicago.

Murray's debut with Minnesota lasted 11 plays. At the end of a third-down run that ended well short of the sticks, Murray had the right side of his helmet smacked hard by Green Bay safety **Javon Bullard's** lowered shoulder with the quarterback already ducking toward the turf to try to avoid contact. Bullard was penalized for unnecessary roughness.

"It was a violent, physical play," O'Connell said. "But I don't put any

fault on anybody there."

Murray eventually walked off slowly under his own power, but **Carson Wentz** took the rest and helped lead the Vikings to a 39-22 victory by scoring the game's last 29 points.

Surgery was clear choice

After spending time during training camp trying to manage **Myles Garrett's** knee injury, it was the Rams' dismal loss to the 49ers that made it evident to everyone that the star defensive end needed surgery.

Garrett did not record a tackle or sack while playing 61.5 percent of the defensive snaps in the Rams' 27-7 defeat in Melbourne. Coach **Sean McVay** said conversations with Garrett immediately after the game last Thursday made it clear he couldn't go on without an operation.

"We had been aware of this, thought it [Garrett's knee] was something he would be able to work through," McVay said. "Obviously, being out there and playing in a real game, you learn like, 'Hey, maybe that's not the case. So let's change course with that.'"

The Rams acquired the reigning AP Defensive Player of the Year from the Browns in a blockbuster trade for pass

rusher **Jared Verse** and three draft picks in June knowing that Garrett's workload had been carefully managed in recent seasons.

Darnold may miss another

Seahawks quarterback **Sam Darnold**, who was injured on the first series Wednesday against the Patriots, has a "very unique, soft tissue" glute injury with no set timeline for his return, the team announced.

It is believed the injury will only sideline him for a short time and his hip joint was unaffected, the team said. He did not practice Monday, but he has not been placed on injured reserve. However, it appears unlikely that Darnold, 29, will be able to play in Sunday's road game against the Cardinals.

Saleh: 'It was not good'

New Tennessee coach **Robert Saleh** watched the tape of the Titans in their first game with a new coaching staff and had a sharp critique: "It was not good in any facet and in any phase of the football game. It has to be better."

In losing their sixth straight season opener, the Titans never led and wound up dominated by the visiting Jets, 23-10, who also went 3-14 last year.

Offense has to improve quickly or else it will be left in the dust

►ON FOOTBALL

Continued from Page C1

game. It was a marked difference from last year, when teams averaged just 41.3.

With upcoming games against the Jaguars, Bills, and Bears, Drake Maye and Josh McDaniels had better get their problems fixed quickly.

Other takeaways from Week 1:

- The Eagles didn't seem to miss Brown much. Jalen Hurts looked pretty much like the same quarterback as last year, throwing for a modest 203 yards, but with three touchdowns and no picks in a 24-22 win over the Commanders. Newcomer Dontayvion Wicks picked up the slack with two catches for 73 yards and a touchdown.

Stefon Diggs had four catches for 55 yards in his Washington debut, and his 10-yard touchdown catch early in the fourth quarter closed the gap to 17-15. However, his boneheaded touchdown celebration resulted in a 15-yard penalty and cost the Commanders a chance to go for 2 and the tie.

Kayshon Boutte, the other receiver discarded by the Patriots, had a limited role for the Texans, catching one of two targets for 21 yards in Houston's loss to Buffalo.

- Brown and Doubs were hardly the only newcomers with shaky debuts. The Chargers scored just 14 points and gained 268 yards in their first game with offensive coordinator Mike McDaniel, with Justin Herbert looking lost for much of it. McDaniel's scheme in Miami relied heavily on runs after the catch, and the Chargers' offense has a lot of plodders.

Kyler Murray threw an interception on his first pass as a Viking, left the game with a concussion later in the first half, then watched as Wentz threw three touchdown passes and led the Vikings to a big comeback victory.

The Browns' offense looked lifeless in their 34-10 loss to the Jaguars in the first game under coach Todd Monken, though the Jaguars' defense, Jacksonville heat, and Deshaun Watson's shaky play probably contributed a lot.

Robert Saleh's debut in Tennessee also was a dud, losing, 23-10, in the revenge game against the Jets. Saleh's defense compiled just one quarterback hit and no sacks against Geno Smith, and Cam Ward played as poorly as he did in his rookie season, throwing for just 140 yards and a touchdown.

- Josh Allen had another sublime performance, throwing for 334 yards and two touchdowns and scoring two more on the ground in the 36-31 win over the Texans. But boy, did he get away with one at the end of the game, with a heave into the end zone

TV viewers were all in for Super Bowl rematch

By Chad Finn

GLOBE STAFF

The Patriots' season-opening, 13-10 loss to the Seahawks last Wednesday night averaged 25.1 million viewers on NBC and Peacock, per Nielsen Big Data.

It's the fourth consecutive season that the network's NFL Kickoff Game launching the regular season has cleared 25 million viewers.

NBC has been the broadcast home for the NFL opener for the last 21 years, but this was just the second on a Wednesday (Cowboys-Giants,

2012).

The rematch of Super Bowl LX peaked with 27.4 million viewers from 9-9:15 p.m., during the second quarter.

Providence (23.8 rating/58 share) and Boston (23.1/61) were the top two metered markets. Seattle was third (22.0/64), followed by Buffalo (18.4/42) and Pittsburgh (15.2/37).

Telemundo's Spanish-language broadcast averaged an additional 423,000 viewers.

Chad Finn can be reached at chad.finn@globe.com.

a \$10 million raise, and he lost three fumbles in a 33-27 loss to the Bengals. The Panthers spent more than \$100 million guaranteed fixing their defense, and almost gave up a 60-burger. And all four teams lost.

- The Rams didn't play Sunday, but still took a big "L" with the news that Myles Garrett needs knee surgery and will be out at least four weeks. It's not something that happened in Australia, and considering Garrett had all offseason to get his knee fixed, something is clearly off.

- Saints coach Kellen Moore made the right call going for 2 and the win in a 31-30 overtime loss to the Lions despite the play failing. The Saints played with a lot of heart in erasing a 21-0 deficit, and Moore's show of faith in his players will pay dividends later. Quarterback Tyler Shough (410 yards) might be the real deal, throwing for 325 yards and leading four touchdown drives after halftime.

- The Packers' four possessions in the fourth quarter: turnover on downs, fumble, interception, turnover on downs. Despite throwing for 387 yards, Jordan Love struggled with Brian Flores's aggressive blitz rate (78 percent), taking four sacks and 15 quarterback hits (seven by Dallas Turner).

- Have the Bengals finally fixed their defense? Al Golden's unit had four sacks and four takeaways against the Buccaneers.

- Why they play the games: The Chargers were the NFL's biggest favorites this weekend at 9½ points, Jim Harbaugh entered the game 6-0 in Week 1, and the Cardinals are practically tanking. Naturally, they beat the Chargers by double digits.

- If the season ended today, the Jets would be AFC East champions.

Ben Volin can be reached at ben.volin@globe.com.

"I'm hopeful Kyle can find a role for us, and find a way to help us and use his speed and catch-and-run opportunities like we saw last year at times," Vrabel said.

If the second half of the opener was any indication, Hollins figures to see a spike in targets. The 32-year-old is a 6-4, 221-pounder who, like Brown, can win on the boundary. Against the Seahawks, Hollins had four catches on five targets for 51 yards. (He led the Patriots in receiving yards, and his 12.8 yards per catch was best on the team.)

On Monday, Vrabel acknowledged Hollins's effort against Seattle, and alluded to the fact that quarterback Drake Maye's trust level with Hollins is solid, something that might not necessarily be the case with the rest of the receivers.

"I think that the quarterback knows he's going to be in the right spot when he's supposed to be there," Vrabel said. "He's a competitive player. He plays on special teams for us, [and is] just ready to go and ready to take advantage of the opportunities.

DAVID L RYAN/GLOBE STAFF

Mike Vrabel seems to be taking a measured approach to the pass-catching possibilities available to the offense.

"Mack's been through that a lot. We're comfortable being able to move him around, as well. He knows multiple positions."

Ultimately, the receivers who spoke Monday returned to the same point: Without Brown in the lineup, things won't change, at least from a scheme standpoint. It'll just be different players out there. For them, it comes down to execution.

"I don't know what the game plan is going to look like just yet. I just know that whenever they

throw at me, I'll be ready," Douglas said with a smile.

"I don't really think anything is going to change," Williams said. "I think we have our core stuff, and that's what we're going to stick to. . . We're just going to keep going with everything we've been doing, and what we know how to do."

The Revolution's Dor Turgeman got free to open the scoring on a 39th-minute breakaway in Sunday's 2-1 victory in Chicago. Turgeman also assisted on New England's second goal.

FRANK DELL'APA
ON SOCCER

Revolution's resilience, depth, growth on display

Less than 40 seconds into the Revolution's 2-1 win Sunday over the Chicago Fire at Soldier Field, Carles Gil went down via a Dje D'Avilla foul. Gil popped up and immediately sent the free kick to Dor Turgeman, who was speeding in alone on Fire goalkeeper Chris Brady.

Turgeman had the shot saved, and the sequence was negated by an offside call, but that gave everyone an idea of what they had in store. The Fire planned to set a physical tone, and the Revolution's best hope would be to absorb pressure and counterattack.

Sure enough, Turgeman got free to open the scoring on a 39th-minute breakaway. And, in the second minute of the second half, Turgeman zipped down the left wing, Fire defenders in pursuit, and crossed for Peyton Miller to finish at the back post.

The rest of the time, the Revolution (13-8-4, 43 points), playing their fourth road game (three wins) in 16 days, basically battled. They absorbed 14 fouls, and Rubiel Vazquez could have called a few more were MLS not a league that favors force over finesse. (Vazquez, in fact, could have whistled Fire defender Sam Rogers for taking down Turgeman from behind on his goal, but made the correct decision allowing play to continue.)

With Jack Harrison and Al-hassan Yusuf injured, and the Fire limiting Gil, the Revolution offense stayed on track. Instead of waiting for Gil to provide the spark, Jackson Yueill, making his third start in place of Yusuf, came through. First, Yueill found Turgeman, isolated one-on-one with Rogers, with a long

clearance. Then, Yueill sent a well-placed lead pass to an unmarked Turgeman after a Will Sands takeaway from Johnny Dean.

Fire coach Gregg Berhalter's second-half substitutes upped the pressure, cutting the deficit on Maren Haile-Selassie's 62nd-minute score. But that would be it for the Fire, as the back line, bolstered by Joshua Wynder's MLS debut, survived a near-miss on a last-second Robert Lewandowski header and held on.

The Revolution, who play host Saturday to Orlando City, improved to 5-3-3 since the World Cup break and have won four of their last five road games. They've shown they can win in different ways — they controlled the tempo at D.C. United (3-0) and the Columbus Crew (3-1), and they were on the defensive against New York City FC (2-1) and the Fire. They also demonstrated vulnerabilities, losing, 2-1, despite dominating possession against Toronto and the Los Angeles Galaxy.

Crucially, they proved they could succeed without a strong Gil influence on the match, and with Harrison out. Dániel Gazdag has added a finishing weapon — his injury-time decider against NYCFC was among the most impressive finishes off a cross in team history — and a left-wing complement to Harrison's right-wing crossing. Making his first Revolution start in place of Harrison, Gazdag sent a highlight-show trivela through ball to Miller that Brady thwarted outside the penalty area.

Then there is that back line, anchored by Mamadou Fofana and Ethan Kohler, which coach

Marko Mitrovic said sets the standard. The Revolution have only five shutouts this season, and only one shutout victory since the World Cup break, but they seem to do enough to win.

"I strongly believe that center backs are actually a reflection of the team," Mitrovic said. "When they are composed on the ball, the team will be composed on the ball. When they are relentless defending, the team will be relentless defending. When they are aggressive, the team will be aggressive. I think that Mamadou and Ethan are actually a mirror of this team. What the two of them present on the field, that's who we are on the field as a team."

The Revolution concluded Sunday with only four players — goalkeeper Matt Turner, defenders Fofana and Sands, and midfielder Brooklyn Raines — in positions they occupied for the home opener in March, an indication of new-found depth.

"You can tell that we're building a resilient team," Yueill said. "We had, early in the year, a lot of home games. This part has been a lot of road games and a tough stretch in terms of travel and the quality of teams that we played against. I think the team has shown a really strong unity. We banded together really well in these difficult moments. Today, just the ending performance, the clearances, the grit and sacrifice that everyone gave, I think has really brought the team's ability higher to get 3 points on the road.

"Everyone gives 100 percent till the end. That's Marko's message to all of us: You have to sacrifice until the final whistle."

Leonard trade OK'd as Clippers concede

ASSOCIATED PRESS

The trade sending Kawhi Leonard back to Toronto is finally complete, with the Raptors and Clippers getting league approval Monday to close the deal that was agreed to earlier this summer.

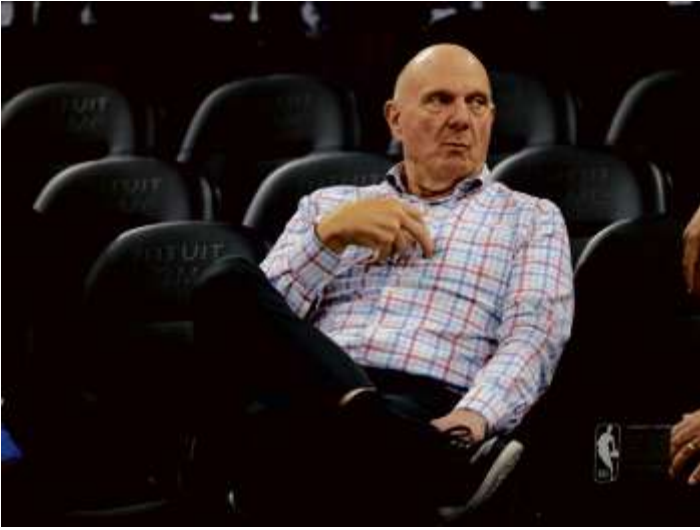

In the end, the deal was the same as what was agreed to 2½ months ago: Leonard returns to the Raptors, with the Clippers getting Brandon Ingram, Grady Dick, two first-round draft picks, two second-round picks, and a pick swap.

"We're thrilled to welcome Kawhi back to Toronto," Raptors general manager and executive vice president Bobby Webster said. "His impact on our organization, our city, and our country is undeniable, and he embodies the competitiveness and championship mindset that we value. We believe his leadership, experience and talent will help us as we continue building toward our next championship."

It's a huge move for Toronto, which won the 2019 NBA title with Leonard leading the way and is expecting to contend in the Eastern Conference. But the sides put the agreement on hold in early July pending any resolution of the NBA's investigation into whether the Clippers circumvented salary-cap rules with regard to Leonard's compensation.

The NBA hit the Clippers earlier this month with massive penalties as a result of that probe, suspending owner Steve Ballmer for one year, fining the team \$30 million, and forcing it to forfeit five first-round draft picks, among other sanctions.

In his first public comments since the punishment announcement, Ballmer said in a statement posted online Sunday night that the Clippers would comply with the penalties.

FILE/RYAN SUN/ASSOCIATED PRESS

Clippers owner Steve Ballmer won't fight the NBA's ruling that he and his team circumvented the league's salary cap.

It was a reversal of initial defiance and a vow to fight against what it called "a heavily biased investigation."

"While there are still disagreements concerning the findings in the report, this is not where I want to focus," he said. "Team owners should support, not distract."

Ballmer apologized to Clippers fans, employees, and his fellow owners for the "distraction and distress," and said the fine had been paid.

"This has been a very difficult time for everybody associated with the Clippers, and for that, I have sincere regrets," Ballmer wrote. "I want to apologize to our fans, employees, and fellow NBA team owners for the distraction and distress this matter has caused, for which I accept responsibility as principal owner."

The league came down hard on the organization after a nearly yearlong investigation led by an outside law firm. The Clippers had said multiple times that they had done nothing wrong and expected to be exonerated.

They also had released a let-

ter from Ballmer's attorney, David Kelley, to NBA commissioner Adam Silver in which he described the investigation as "a witch hunt" and the subsequent penalties as a "gross injustice."

Ballmer said the team is "committed to putting this chapter behind us."

"The challenges ahead of us are significant, but so is our resolve," he said. "We will continue to build our team and invest in our community. The confidence of our fans is our priority. With our talented roster, outstanding staff, and clear vision, I am certain that we will compete at the highest level and be an organization our fans can be proud of."

Leonard, 35, was hit with a \$700,000 penalty as a result of that investigation. But he was not suspended and his contract was not voided, and the Raptors evidently are certain that his status will not be affected.

Toronto visits the Clippers on Nov. 2 and hosts the Clippers on Jan. 1. The teams are also scheduled to meet at Vancouver in a preseason game on Oct. 10.

Ex-Providence guard to Celtics

Carter receives Exhibit 10 deal

By Adam Himmelsbach
GLOBE STAFF

The Celtics on Monday signed former Providence guard and 2024 first-round draft pick Devin Carter to an Exhibit 10 contract, according to a league source.

Players on Exhibit 10 deals receive \$90,000 bonuses if they are waived and agree to join the team's G League affiliate, but the source said Carter will have the opportunity during training camp to compete for Boston's final regular roster spot, as well as its two-way-contract opening.

JENNY KANE/ASSOCIATED PRESS

Devin Carter averaged 8.9 points and 3.3 rebounds for the Kings last season.

Carter spent his freshman season at South Carolina before transferring to Providence. As a junior in 2023-24, he aver-

aged 19.7 points and 8.7 rebounds per game and was named Big East Player of the Year.

Carter declared for the NBA Draft after that season and was chosen by the Kings with the 13th pick. Last season, he appeared in 38 games and averaged 8.9 points and 3.3 rebounds.

He was traded to the Hawks in June, but Atlanta faced a roster crunch and waived Carter on Friday.

The Celtics open training camp on Sept. 29.

Rust brothers, Central Catholic's Smith among Week 1 stars

KEN MCGAGH FOR THE GLOBE

►HIGH SCHOOL FOOTBALL
Continued from Page C1

showdown against Vargas, the five-star recruit committed to Ohio State, and second-ranked Prep.

"I'm fired up for the rest of the week and the rest of the year," said Central Catholic senior left tackle Brian Waller-Reitano, a Navy commit. He noted that he and Smith grew up in the same town, and have played with and against Vargas and Wood since middle school. After seeing the growth in his pal, he'll ride with Smith over anyone.

"[Merrimack Valley Conference] offensive player of the year, 1,000 rushing yards, 1,200 passing — he can get it done," Waller-Reitano said. "He's going to go toe-to-toe with Vargas next week. Stars don't mean [much] when it comes to playing the game."

Central Catholic will need Smith's best in the next few weeks. They host the Prep before traveling to Bishop Hendricken (R.I.) and Xaverian.

"Not many quarterbacks are as tough as him," coach John Dubzinski said. "We're going to lean on him all year long. Everybody wants to do well for him, because he's giving so much to the team."

■ With trips to Westwood and Lawrence on the docket, we couldn't make it to Springfield on Friday. But a livestream viewing of the Prep's narrow win at Springfield Central did not show

Vargas at his best.

He had his moments (15-of-26 passing, for 144 yards and a touchdown), but the offense struggled to get on the same page. They were no doubt thanking their defense, and Dayvian Sullivan's late pick-6, for a 1-0 start.

There's also no question that after that performance, Vargas, a Lawrence resident, will be even more fired up to return to his hometown on Friday.

■ Our season-opening trip was easy compared to the road Catholic Memorial seniors Kingston and Christian Rust have been traveling.

The twin brothers, a quarterback and receiver/cornerback, grew up in South Kingstown, R.I., and moved to South Florida in 2022 "for football," Kingston noted after the third-ranked Knights' 36-14 win at No. 17 Andover.

They've played at three high schools — Palm Beach Central (Wellington, Fla.), Barbara Goleman (Miami Lakes), and Christopher Columbus (Miami) — while working with private trainers, including ex-NFLer Ken Mastrole. They moved to Dedham in February.

Kingston Rust, a QB since the age of 4, started throwing with speedster Ramar Thomas when he arrived here last winter. The pair connected for several big plays on Thursday. Thomas's Division 1-caliber wheels reminded Kingston Rust of what he faced in South

Florida.

As an underclassman, he recalled, those speedy defenses punished him for his happy feet. As a sophomore, he broke his collarbone on a hit.

After watching a more mature Kingston Rust show pocket presence, Catholic Memorial coach John DiBiaso was pleased.

"I've only had him for like two weeks," DiBiaso said. "I can't take credit for it. But whoever taught him before, taught him well."

■ CM, as anticipated, is once again loaded. Their largest player — 6-foot-7-inch, 315-pound Jack Erhartic — is an eighth-grader who has yet to see action.

Late in Friday's game at Andover, a few of the grade-schoolers behind the CM sideline stopped running around long enough to try and get his attention.

"75! 75!" one of them called from behind the fence. He turned.

"Did you pancake someone?" the kid asked.

Erhartic's baby-faced grin broke through his facemask.

"Not yet," he said, dreaming of varsity snaps to come.

Matt Porter can be reached at matthew.porter@globe.com. Follow him on [BlueSky](https://www.bsky.com/mattyports) at [mattyports.bsky.social](https://www.bsky.com/mattyports).

When the pads went on for real Friday, quarterback Caden Smith and Central Catholic showed they're ready for the stiff tests to come, routing BC High.

DANIELLE PARHIZKARAN/GLOBE STAFF

Junior Max Tillmann and Medfield have state title aspirations in Division 3.

HIGH SCHOOL BOYS' SOCCER NOTEBOOK

Tillmann does it all for No. 6 Medfield

By Mike Puzzanghera
GLOBE CORRESPONDENT

How did **Max Tillmann** begin his junior season on the Medfield boys' soccer team?

Within nine minutes, the star striker had a goal, assist, another shot saved, and one off the woodwork. By the time the Warriors' opener was done, an 8-0 Tri-Valley League win over Ashland, Tillmann had three goals and two assists — and he sat most of the second half.

"He's a special player," Medfield coach **Jason Heim** said.

It was a typical all-action performance from Tillmann, who picked up right where he left off from his stellar sophomore season. Ask around at Medfield, and it's quickly clear: This is just what he does.

"It's like an extra player," junior captain **Will Koch** said. "You play it to him, he takes two guys on, beats another guy, then plays it across and gets an assist."

Tillmann powers the Warriors, ranked sixth in this week's Globe Top 20 and projected to be one of the big contenders in Division 3. A year ago, he scored 33 goals and 11 assists, earning league MVP and All-New England honors. He was the lone sophomore selected to the Globe's All-Scholastic team.

They'll need him at his best to break through in the post-season — but there's plenty of belief in the group.

"Every season we play, the expectations just get higher," Tillmann said. "This season, it's something I've never seen. Expectations are as high as they can possibly be."

How does Tillmann produce so efficiently? There are plenty of factors. One is his ability to make the most out of a small amount of space. There can be multiple defenders around him, but the shifty forward tends to find a way out of trouble and either find a teammate or a sight at goal.

He's at the top of any opponent's game plan and there's nearly always someone marking him. But with speed, control, and technical ability, that doesn't matter much.

"We have such a great team, we don't need to rely on one or

two people every time," Tillmann said. "I think everybody knows there are going to be some games where I can make a difference and make something happen. But I think the special part about this team is so many different kids can do that."

Already, he's approaching **Charlie Curmi's** program record of 48 goals. Tillmann just started his junior year, but that's not his end goal.

"He's never been like, 'I need to score this many goals.' He's more about the whole team and how we're doing as a team," Heim said. "He's just a very unselfish player. He's always looking for someone."

Tillmann started his career in the midfield, where he was one of a group of freshmen making an impact as the Warriors advanced to the semifinals.

After earning the No. 1 seed in the Division 3 tournament last year with Tillmann up at striker, the Warriors crashed out in the second round.

All those freshmen from the semifinal trip are now juniors. The Warriors have scarcely had junior captains in Heim's 23 years in charge, and this year they have three —

Tillmann, Koch, and **Will Huther**. Other key pieces include juniors **Calvin Frey** and **Sebastian Cole** and senior goalie **Elliot Leong**.

They feel the experience — both the good and the bad — honed them.

"We call it a blessing in disguise," Tillmann said of the early exit in last year's tournament. "At the time, we were like, 'this sucks.' That was one of the best teams I've been on. But I think it's going to help us this year, just the mentality that anyone can beat us."

Corner kicks

■ **David Gavron** has been teaching social studies at Wayland since 2004. He has been the boys' soccer coach since 2008.

Last week, he celebrated his 200th win with the program, a 6-1 statement against defending Division 1 champion Natick.

"The outcome was nothing I could possibly have ever imagined, beating such a quality team at their house," said Gavron. "The boys have really bought into this concept that we never, ever stop working."

What did No. 200 mean to Gavron?

"I sometimes end my conversation with parents about how lucky I am to coach and teach at Wayland," he said. "I really think that the best relationships for young men playing a sport is when they have their coach in the building."

Wayland improved to 2-0 with a 6-1 win over Dedham.

"You can't sit back and just think that you can do what you did yesterday. You have to continuously work to find ways to be better, and to be in the moment," said Gavron.

■ St. Mary's finished out the week on a high, winning the Lynn City Championship thanks to two goals from tournament MVP **Jade Abila** in a 3-2 win Sunday over Lynn Tech.

CLIFFORD, Mary Cecilia (Joyce)

Of Canton, passed away peacefully, on September 13, 2026. She was predeceased in death by her devoted husband, Paul D. Clifford, Sr.

Loving mother to Eileen Clifford, Marychris Clifford and her husband, Robert Ryman and Paul D. Clifford, Jr. Known as “Gigi” by her four grandchildren, Shane and Julia Ezepik, Samantha and Brendan Clifford. All of whom brought her endless joy and bowls of Crescent Ridge Ice Cream. Born in Portsmouth, NH, she grew up in Dorchester, MA. Mary was one of seven children raised on the second floor of a triple decker, to John J. and Delia Joyce, of County Galway, Ireland. She was the eldest and proud sister of John Joyce, the late Charles Joyce, Eileen Bayer, the late Michael Joyce, Annmarie Dixon and Margaret Pleasants. Many of her happiest times were spent at Joyce family parties, singing Irish music and dancing. She was “fun” aunt Mary to dozens of Clifford and Joyce nieces and nephews, who she thoroughly enjoyed spending time with. Although she left the city to raise a family in the suburbs, she was a city girl at heart. She enjoyed walking and hot dogs at Castle Island, shopping at Filenes Basement, frequenting Longs Jewelers more than her husband would have liked and spending many family milestones enjoying clam chowder overlooking the water at Jimmy’s Harborside Restaurant. Never wanting to be far from the water, she spent many weekends in York Beach, Wentworth by the Sea and winter months in Naples Florida. She had a special place in her heart for Popponesset. She loved to swim at Sandy Beach, followed by a lobster salad sitting at the bar overlooking the ocean at the Popponesset Inn. Even though she battled numerous heath issues over the last 25 years of her life, she kept smiling, laughing and was truly a joy to be around, for this her children will be eternally grateful. Visitation in the O’Brien Funeral Home, 146 Dorchester St., SOUTH BOSTON, on Thursday, September 17, from 5-7pm. Funeral Mass in St. Ann Church, 243 Neponset Ave., Dorchester, on Friday, September 18, at 11:30am. Relatives and friends are kindly invited to attend. Interment is private. In lieu of flowers, donations can be made to Catholic Charities of Boston, at ccab.org For directions and guestbook, please visit www.obrienfunerals.com

GIOIOSA, Edward R.

Edward passed away peacefully, at his home in Florida, on March 15, 2026. He and his wife, Barbara were buried on May 30, 2026. A Celebration of Life was held with family after Burial. Ed worked in many professions over his lifetime. His passions were family, music and cars. Ed was a kind and gentle soul who had a way of making everyone feel special. He is greatly missed.

Visiting Hours: n/a

KLEPONIS, Marie A. (Skudris)

Of Reading, September 13, 2026. Beloved wife of the late John R. Kleponis. Devoted mother of Richard John and Deborah Kleponis of Reading, Janet M. and Nicholas Prizio of Medway, Carol A. Kleponis of Reading, Louise M. and Charles Pothier of North Reading, Diane M. and her late husband, Bryan Finnemore of Lynn. Loving grandmother of Jason Kleponis, Andrew Kleponis, Karen Jackson and Nicholas Prizio. Loving great-grandmother of Grace and Ella Jackson and Mason and Calvin Prizio. She was the cherished sister of the late Winifred J. Reardon and the late William J. Skudris; and survived by several nieces and nephews. Funeral from the Douglass, Edgerley and Bes-som Funeral Home, 25 Sanborn St. (corner of Woburn St.) READING, on Friday, September 18, at 9:30AM, followed by a Mass of Christian Burial in St. Agnes Church, 186 Woburn St., Reading, at 10:30AM. Burial will follow at Charles Lawn Cemetery, in Reading. Funeral home Visiting Hours will be Thursday, September 17, from 4PM-7PM. In lieu of flowers, contributions may be made in Marie’s memory to Christ the King Parish, 186 Woburn St., Reading, MA 01867. For directions and online guestbook, visit www.douglassfuneralhome.com

MAITLAND, Ann Mary

Died on September 8, 2026, while under hospice care in New Hampshire. She grew up in East Providence, Rhode Island, and was a graduate of both East Providence High School and Rhode Island College. She taught elementary school in Riverside, Rhode Island, and Nashua, New Hampshire. Ann met her husband, Bob, in college. They married on April 11, 1970, and started their married lives in Nashua, then moved to Merrimack, and later returned to Nashua.

She stopped teaching when her children were born and took great joy in watching and helping them grow. As they became more independent, she worked at Brookstone’s head office and later became a receptionist at Nashua Medical Group (NMG).

She was very “crafty.” Through the years, Ann created some beautiful projects in quilting, counted cross stitch, needlepoint, papercraft, and Tolle painting. She also loved decorating and setting up displays. For several years, Ann filled the display case outside the Fairgrounds Middle School library to illustrate the theme for the month. At NMG, she created holiday/seasonal displays on the nurses’ station counter. The nurses and the patients loved the brightness and the creativity.

Ann made friends wherever she went. She once walked her beagle, Max, through the neighborhood for 525 straight days, rain or shine. Some of these walks took a lot longer as she would stop and chat with neighbors.

Ann was predeceased by her parents, Pete and Ruth; and sister, Ellen.

She is survived by her husband, Bob; daughter, Bonnie; and son, MacGregor, his wife, Gwen; and their two children; sister, Patricia Jacquart of Riverside, RI; and sister, Gail Hultz of Scottsdale, Arizona.

Services: Visiting Hours will be held on Wednesday, September 16, 2026, from 4:00 PM to 6:00 PM, at Davis Funeral Home, 1 Lock Street, NASHUA, NH. A Burial Ceremony will be held on Thursday, September 17, 2026, at 10:30 AM, at Evergreen Cemetery, Nashua, NH.

Arrangements are in the care of Davis Funeral Home, 1 Lock Street, Nashua, NH. An online guestbook is available, at www.davisfuneralhomenh.com or by calling (603) 883-3401.

MARCIANO, Grace J.

Age 99, lifelong resident of Topsfield. Devoted daughter of the late Carmine and Teresa (Coppola) Marciano; and sister of the late, Olympia LoConte, Mary Iovanella, and Euplio, Angelo, Savino and Yolanda Marciano. Pioneer in the telephone company, talented pianist and devoted to her family. She is survived by her devoted caretaker; grandnephew, Gregory Iovanella and his wife, Kristen of South Hamilton; and their children, Dominic, Carmelo and Gabriella Iovanella. Her loving nieces and nephews, Richard Marciano and his wife, Diane of AZ, Paul Marciano and his wife, Jean of Danvers, Theresa Hilton and her husband, John “Jack” of Beverly and Hawaii, John Iovanella and his wife, Kimberly of North Andover, Isabel Winslow of Beverly, Carmen Winslow of NH and Nicholas Jacobellis of FL; dear friends, Sean Fenton of Kennebunc, ME and Marilyn Washington of Wilbraham; grandniece, Angela Kasumova and her husband, Elshad; and their children, Alexander and Emil of Andover; and many loving and devoted grandnieces, nephews and extended nieces and nephews, into the next generation, who meant so much to Grace. In addition to her parents and siblings, Grace was predeceased by many family members, including her special niece and caregiver, Teresa Iovanella. Arrangements: Relatives and friends are invited to attend Grace’s Funeral Mass, which will be held at St. Rose of Lima Church, 12 Park St., Topsfield, on Friday, September 18, at 11:30 A.M. (Please meet directly at church). Her Burial will follow in Pine Grove Cemetery, Topsfield. Visiting Hours will be held at O’Donnell Creations - Funerals - Celebrations, 167 Maple St. (Rte. 62), DANVERS, on Thursday, September 17, from 4 to 7 P.M. In lieu of flowers, donations in Grace’s memory may be made to the March of Dimes, P.O. Box 5141, Boone, IA 50950.

MORRISSEY, Thomas James “Thom”

 Age 78, of Bedford, formerly of Concord and raised in Charlestown, died peacefully, on September 10, 2026. Thom is survived by Linda, his beloved wife of 49 years; his three children, Patrick (Karen), Katie (Nimchy), and Meggie (Enrique); and his five grandchildren, Owen, Claire, Jaxon, Francis, and Leo. Also survived by his six brothers: Joe, Jack, Paul (Betty), Michael (Donna), Jim (Laura Lynn), and Stephen (Sis). Funeral Mass on Monday, September 21, at 11:00 a.m., in St. Bernard’s Church at Holy Family Parish, 12 Monument Square, Concord Center. Burial will follow with U.S. Navy Military Honors at St. Bernard’s Cemetery. In lieu of flowers, memorial donations may be made in Thom’s name to support the Intentional Adult Community at Melmark New England, where Thom’s grandson, Owen lives and attends school. This program provides specialized lifelong housing and vocational care for adults with profound autism. For the full obituary, donations link and online guestbook, visit www.DeeFuneralHome.com

SHIELDS, Madelyn “Lyn” (Moon)

A Life of faith, joy and purpose

Madelyn “Lyn” Moon Shields, age 77, of Manchester, Massachusetts, died on Thursday, September 10, 2026, of complications from cancer.

Lyn’s lifespan may have been cut short, but her wingspan goes well beyond her 77 years. She was a devoted wife, daughter, mother, grandmother, sister and friend, and there was no one who met Lyn who did not feel better for knowing her.

Born February 27, 1949, in Detroit, Michigan, to Philip and Frances Kendall Moon, Lyn spent most of her adult life on the North Shore of Boston, primarily in Beverly Farms.

Lyn lived life always choosing to see the good in people and in her own circumstances. She woke up every morning, even when ill, and chose to shine her spotlight on the gifts in her life, her friends, the birds outside, her flowers, her family and most recently, non-gluten-free sweets. At the same time, Lyn was acutely aware of people less fortunate. She spent much of her adult life serving others, whether that meant caring for friends who were ill or serving the broader community at large on boards and in support of charities. Along with her husband, Tom, Lyn founded Alpha New England, which has continued to thrive since its inception in 2001. She also served on the board of Gordon College for more than eight years. Lyn’s generosity of spirit was unmatched.

As a woman of deep faith, Lyn led and participated in Bible classes since 1985 and was active in a fellowship group for more than twenty years. She served as a Chalice Bearer and Lay Eucharistic Minister, bringing Communion to those unable to attend church. She volunteered with Family Promise, an organization working to prevent homelessness, and she continued delivering Meals on Wheels even after her cancer diagnosis.

Lyn loved to travel, to visit museums (locally and abroad), and always remained curious and interested in the world. Her friendships span continents, religions and faiths, and reflect her welcoming and openhearted nature.

Lyn loved racket sports and up until recently, her pickle ball dance card was always full. She found a way to exercise every day, whether it was aerobics or step class in the 80s, going to the MAC with her TRX ladies more recently, and always walking at a pace that most would consider a brisk jog. Lyn loved to walk on the beach in warm weather and to cozy up with a book by a blazing fire in the winter. She loved the Beatles, George Harrison was her favorite, and her favorite verse in the Bible was Philippians 4:4-9. Nana loved playing with her eleven grandchildren when they were young and supporting them on the sidelines of their games and music gigs as they grew. She never developed a love of cooking or professed to have a green thumb, but nobody’s perfect.

In Lyn’s honor, Dalton Electric, the family business, established the Lyn Shields Living Our Values Award, machined from the company’s own steel and given to one employee a year. One of Lyn’s last wishes was to be able to present the inaugural award, which she did via a video message.

Lyn will be remembered not only for her deep faith, but for her constant care for friends and family, her laugh and warmth, and her loving and spirited nature.

Lyn/mom/nana is deeply missed by her beloved husband of 44 years, Thomas Shields; son, Thomas Shields, Jr. and his wife, Louisa; and their children, David, Stephanie, and Eliza; daughter, Kira Willey and her husband, David; and their children, Lola, Tristan, and Brody; son, Seth Bartlett and his wife, Wrenn; and their daughter, Luli; daughter, Kyra and her husband, Andrew; and their children, Cameron, Riley, William and Graham; her brother, Richard Moon and his wife Risa; her brother and sister in-law, Peter and Susie Shields; and her many beloved nieces and nephews.

A Funeral Mass will be held in Celebration of Lyn’s Life at Sacred Heart Church, 62 School Street, Manchester-by-the-Sea, on Thursday, October 8, at 11am. Relatives and friends are invited to attend. Burial is private. In lieu of flowers or gifts, contributions may be made in memory of Lyn to the following: a charity of your choice, Sacred Heart in Manchester-by-the-Sea, Gordon College or Alpha New England. Arrangements made by the Campbell Funeral Home, 525 Cabot Street, BEVERLY, MA 01915. Information, directions and condolences, at www.campbellfuneral.com

Thomas Graham, key arms control negotiator; at 92

By Adam Nossiter
NEW YORK TIMES

Thomas Graham Jr., an American lawyer and diplomat who played a central role in negotiating nuclear arms treaties for nearly 30 years during the Cold War and for several years afterward, died Sept. 3 at his home in Washington. He was 92.

His death was confirmed by his stepdaughter, Missy Ryan.

Mr. Graham dedicated his life’s work to eliminating, or at least lessening, the overwhelming threat of nuclear annihilation that hung over the globe for decades.

Beginning in 1970, when he joined the Arms Control and Disarmament Agency as a young lawyer, Mr. Graham had a hand in every one of the alphabet-soup of arms control treaties — some 20, including SALT and START — that were once a main focus of American national security policy. He served four presidents as chief counsel of the now-disbanded agency and was President Clinton’s special representative for arms control from 1994 until retiring in 1997, achieving the rank of ambassador.

In treaties involving nuclear nonproliferation or the construction and deployment of intercontinental ballistic missiles, Mr. Graham was at the center of the bureaucratic intrigue that in some cases moved these agreements forward or held them back. The US and the Soviets pushed and pulled for years about the number of missiles and other weapons they would stockpile in their arsenals.

Mr. Graham attempted to allay the disarmament worries of hawks on Capitol Hill who were fearful the Soviet Union was gaining an advantage.

He helped set off a roiling Cold War debate in 1985 with a legal memorandum that said the Reagan administration’s proposed Strategic Defense Initiative, the so-called “Star Wars” land and space-based antimissile system, technically violated the 1972 antiballistic missile treaty. The reaction was furious, with the Democratically controlled Congress blocking efforts to reinterpret the treaty.

Mr. Graham negotiated with Soviets over missile stockpile limits and pushed with success in 1995 to extend indefinitely the 1970 Treaty on the Nonproliferation of Nuclear Weapons, whose signatories included the United States, Britain, France, China, and the Soviet Union.

Long after he had left government service, Mr. Graham could recall with extraordinary precision the number of missiles, launchers, submarines, and other armaments at issue in the SALT II treaty — the landmark 1970s arms limitation treaty never ratified by the Senate. He had total command of the details and of the extent of the respective nuclear arsenals of the two world superpowers. The numbers haunted him.

“In retrospect, it is just unbelievably preposterous what we did,” he said in an oral history with the Association for Diplomatic Studies and Training in 2013. “The US built over 70,000 nuclear weapons and the Soviets built 55,000 and at the peak, which was in the 1960s for the US, we had 32,500 nuclear weapons in our arsenal and the Soviets for many years had 45,000 in their arsenal, far more weapons than there ever possibly could have been missions for, even in the most all-out of nuclear wars.”

The looming specter of these arsenals was not simply an abstraction for Mr. Graham; some in the US defense establishment believed they might eventually be deployed. “There remained members of Congress and defense intellectuals who retained the concept of the possibility of the use of nuclear weapons in war,” he said in the interview.

The threat of use drove him to treat his Soviet negotiating counterparts with respect. “Very capable, very professional, very serious people,” he said in the interview. The chief Soviet negotiator, Vladimir S. Semyonov, “gave one the impression of being hard-line, immovable, and difficult,” Mr. Graham said. “He was that, but he was also a professional. He wanted progress.”

As did Mr. Graham, which sometimes opened him up to attacks from members of Congress and conservative officials that he was giving up too much. But for Mr. Graham — sometimes a Republican, sometimes a Democrat — it was never a matter of ideology.

“He was passionate about preventing nuclear war and proliferation,” said Daryl G. Kimball, executive director of the Arms Control Association, a Washington, D.C., policy and lobbying group.

Mr. Graham’s success in obtaining an indefinite extension of the Nuclear Nonproliferation Treaty was “incredibly important,” Kimball said.

Thomas Graham Jr. was born Oct. 9, 1933, in Louisville, Ky., the only child of Thomas Graham, an investment banker also involved in local Democratic politics, and Charlotte (Henriques) Graham.

He grew up with “notions that you were supposed to make something of yourself and do something with your life and contribute to the community,” he said in the oral history.

He graduated in 1955 with a bachelor’s degree from Princeton University’s Woodrow Wilson School of International Affairs and attended the Institut d’Études Politiques in Paris, before serving in the Army from 1956 to 1958.

At Harvard Law School, he took a course from a professor, Henry Kissinger, with whom he later worked in the Nixon administration and regarded warily. After graduating in 1961, he held a variety of jobs on Capitol Hill and worked for Richard Nixon’s presidential campaign in 1968.

His books included “Disarmament Sketches: Three Decades of Arms Control and International Law” (2002), “Common Sense on Weapons of Mass Destruction” (2004), and “The Alternate Route: Nuclear-Weapon Free Zone” (2017).

Besides his stepdaughter, Mr. Graham leaves his wife of 43 years, Christine Ryan; two daughters, Eliza Graham and Clover Graham Hackett, from his earlier marriage to Clover Nicholas, which ended in divorce; one son, Tommy, also from his marriage to Nicholas; a stepson, Thomas Ryan; and seven grandchildren.

Through years of tortuous negotiations with the Soviets, of taking and of giving, Mr. Graham was guided by one overriding principle, he said in the oral history: “The view very definitely was, that we’ve got to work out some arrangement with the Soviets to moderate this competition, or it would get out of control.”

in Czechoslovakia, and made 373 appearances for the club.

He was voted West Ham’s player of the year following his first season.

He was loved by supporters, who would sing at matches “My name is Ludek Mikloško, I come from near Moscow, I play in goal for West Ham.”

“Rest in peace Ludek, our beloved, inspirational goalkeeper and gentle giant of a man,” West Ham said in a statement.

Boston Bruins forward David Pastrnak, a die-hard Baník Ostrava fan, joined the mourners.

“We’ll never forget...You were fighting till the end.”

Ludek Mikloško, 64, ex-goalkeeper

By Karel Janicek
ASSOCIATED PRESS

PRAGUE — Former Czechoslovakia, Czech Republic, and West Ham goalkeeper Ludek Mikloško has died. He was 64.

His death was announced on Monday by his family and by Baník Ostrava, the Czech club where Mr. Mikloško spent eight years before moving to England and where he served as sporting director despite fighting cancer the last five years.

Mr. Mikloško joined West Ham in February 1990, becoming the first Czech to make an impact in the English football after the 1989 Velvet Revolution that ended the communist rule

Obituaries

Bob Mackie, designer who dressed Cher and many other stars, 87

By Penelope Green

NEW YORK TIMES

Bob Mackie, the exuberant costume and fashion designer whose glittering, beaded, sequined, rhinestoned, feathered, and often winged creations bedecked, bedazzled, and elevated performers like Carol Burnett, Diana Ross, Tina Turner, Bernadette Peters, Bette Midler, Mitzi Gaynor, Liza Minnelli, Elton John, RuPaul and, most memorably and enduringly, Cher — as well as an 11.5-inch model named Barbie — died Monday in Palm Springs, Calif. He was 87.

The death, at a hospital, was caused by pneumonia, Joe McFate, Mr. Mackie's longtime design director, said.

“He dressed every spangly woman in show business,” said Frank DeCaro, author of “Unmistakably Mackie: The Fashion and Fantasy of Bob Mackie” (1999). “You can mention some of the greatest names in fashion, and the average person won’t be able to conjure up, for example, a Giorgio Armani suit. But if you say to an American of a certain age, ‘What is a Bob Mackie?,’ they know exactly what you’re talking about.”

Mr. Mackie got his start in Hollywood, dropping out of college to sketch for costume designers Jean Louis and Edith Head, but it was television that made his name. When Carol Burnett put together her variety show in 1967, she picked Mr. Mackie to design the costumes. At the time, he was in his late 20s — though he looked about 12, Burnett often said. Over the show’s 11 seasons, he created an average of 60 costumes a week for Burnett, Harvey Korman, Vicki Lawrence, Tim Conway, and Lyle Waggoner, as well as the show’s guest stars and supporting performers.

The skits, of course, were comedic gold, and Burnett said that she frequently found her characters through Mr. Mackie’s designs. For Mrs. Wiggins — the dim and indifferent secretary whom “the IQ fairy never visited,” in Burnett’s words — he assembled a frosty blond wig, a pushup bra and a tight black skirt that wasn’t quite tight enough for Burnett’s lanky frame. “Stick your behind back into it,” he instructed her, and the character’s mincing walk was born.

The show was known for its zany movie parodies, and when it took on a scene from “Gone With the Wind” (renamed “Went With the Wind”) in which the hero, fallen on hard times, has a dress made out of her curtains, Mr. Mackie asked the prop department for a curtain rod so he could fashion his own version for Burnett as “Starlet O’Hara.” (It was such an instant, irresistible sight gag that Burnett made sure to warn Korman, playing “Ratt Butler,” beforehand so he wouldn’t lose his composure on-stage.)

“That gown is gorgeous,” Ratt exclaimed in the skit.

“Thank you,” Starlet replied. “I saw it in the window, and I just couldn’t resist it.”

Mr. Mackie’s curtain dress is now in the permanent collection of the Smithsonian National Museum of American History in Washington.

Television variety shows were the closest thing to movie musicals, as Mr. Mackie liked to say, particularly in the 1970s; they were nightly extravaganzas that delivered high-wattage stars and over-the-top, glamorous fashion to America’s living rooms.

Sonny Bono and Cher had veered from their folk roots and were playing Las Vegas when CBS hired them to do a weekly show.

Mr. Mackie had seen photos of them, and as he told Vogue, which put together an oral history of the designer in 2019, “They were kind of like New Age cave people. There they were in their fur vests and funny pants and belts and just a whole look that nobody had had up until that time.”

The producers, he added, didn’t know what to do with Cher, but Mr. Mackie did. (He noted that she was built just like Burnett, a perfect size 6 with no cleavage: a human clothes hanger.) Their collaboration, first on “The Sonny and Cher Comedy Hour,” which ran from 1971 to 1974, delighted television audiences and confounded the network’s censors, as Mr. Mackie bared more and more of Cher’s extraordinary physique in ever more outlandish getups.

Mr. Mackie recalled a censor complaining of one outfit that revealed the undersides of Cher’s breasts (the industry term was “underboob”).

“Well, if we stand her on her head,” he retorted, “it will just be cleavage.”

Later, Cher became the first person allowed to show her belly button on television.

“People can watch a show and see people stealing hubcaps, and then they can go out and steal hubcaps,” she told TV Guide, “but I don’t think my show will provoke anybody into stealing a belly button.”

Reviewing “Cher,” her postdivorce variety show that ran for 11 months in 1975-76, Newsweek declared that the performer “played second banana to the show’s real star — a cool, hip, certifiably freaky costume designer named Bob Mackie. Television hasn’t shown so much glitter and flash since NBC did a special on Liberace’s closet.”

As DeCaro observed, “He brought glamour to a sequin-starved America.”

In the process, Mr. Mackie’s name became a gay touchstone. “For gay kids sitting at home like me or RuPaul, looking for a way out of our drab surroundings, Bob Mackie was the portal,” DeCaro said.

“He made women look like drag queens, but in the best possible sense. He was a window into a glamorous, funny, inclusive

CHRIS PIZZELLO/ASSOCIATED PRESS/FILE; BELOW, AP PHOTOS/FILE

Mr. Mackie, seen at his home in Palm Springs, Calif., on Oct. 20, 2021, kept celebrities in sequins and glamorous gowns. Among others over the years, he dressed Pink (far left), Cher (center), and Tina Turner.

glitter world.”

And yet Mr. Mackie — preternaturally boyish, always soberly dressed in his uniform of button-down shirts and khaki pants, like he had stepped out of a Ralph Lauren ad — looked as if he would be allergic to sequins.

Robert Gordon Mackie was born in Monterey Park, Calif., a bit east of downtown Los Angeles, on March 24, 1939. That was the year, he liked to say, that “Gone With the Wind,” “The Women,” and “The Wizard of Oz” came out.

His father, Charles Robert Mackie, who worked at Bank of America, and his mother, Mildred Agnes (Smith) Mackie, a homemaker, divorced when he was young, and he was raised by his paternal grandmother, Bessie Ida Mackie, in Alhambra, Calif. Her house, he recalled, was on a busy highway with not much neighborhood, and he was often alone and lonely. He drew to entertain himself.

“I was a weird kid,” he told Vogue in 1990.

“But I was always pretty good with crayons.”

His mother and his older sister, Patricia, would visit on

weekends and take Bob to the movies — Technicolor musicals, mostly, that entranced him. “It didn’t look like that at my house, and I wanted to be part of that,” he said. He remembered being dazzled by the dance numbers in “An American in Paris.” When the credits rolled at the end, he discovered that costume design was a job.

Mr. Mackie attended Pasadena City College and then the Chouinard Art Institute, now part of the California Institute of the Arts, before dropping out to work on movies, first with Fred Thompson, then Louis and Head. (Mr. Mackie sketched the skintight gown that Louis made for Marilyn Monroe when she sang “Happy Birthday” to President John F. Kennedy in 1962.)

In 1963, he was hired by Ray Aghayan, an Iranian-born designer who was working on Judy Garland’s television variety show. The two became business and romantic partners, sharing the first Emmy ever awarded for costume design, in 1967, for their work on “Alice Through the Looking Glass,” an eye-popping confection of a television movie.

The pair received Oscar nom-

inations for “Lady Sings the Blues,” the 1972 biopic of Billie Holiday starring Ross, and for “Funny Lady,” the 1975 sequel to “Funny Girl.”

Mr. Mackie was nominated on his own for “Pennies From Heaven,” the 1981 film musical starring Steve Martin and Peters.

He won an Emmy in 1999 for Cher’s costumes in “Cher: Live in Concert From Los Angeles” and again in 2003, for “Cher: The Farewell Tour.”

A brief marriage to Marianne Nicholson, an actress whose stage name is Lulu Porter, ended in divorce in the early 1960s. Their son, Robert Gordon Mackie Jr., who was known as Robin and worked as a makeup artist, died of AIDS in 1993. Aghayan died in 2011. Mackie’s survivors include a granddaughter and two great-granddaughters.

In the early 1980s, Mr. Mackie began designing ready-to-wear. A decade later, he created a line of clothing and home furnishings for QVC, the shopping channel. While critics enjoyed the high camp factor of his cinema-siren clothes and the theatricality of his fashion shows, he

was often derided for being not an authentic fashion designer, although his clothes were meticulously made, like couture garments.

“They called him Barnum Bob, the Raja of Rhinestones and the Sequined Sheik,” McFate said.

“They thought of him as a Hollywood guy. It was hard for him to get a footing on Seventh Avenue.”

In 2001, the Council of Fashion Designers of America gave Mr. Mackie an award for “fashion exuberance.” In 2019, he earned the organization’s lifetime achievement award. That same year, he won a Tony for the costumes in the Broadway musical “The Cher Show,” a dizzying, giddy paean to the performer and her style.

As he told Vogue, “For a long time, everyone just thought all I knew how to do were Cher’s dresses, you know, with her tummy out and showing half her whatever.”

He added, “I always just sort of pray in my life somebody will give me a nice 19th-century movie or a good 1930s Depression film.”

William Anderson, doctor and civil rights leader in Georgia, also was veteran, at 98

By Clay Risen

NEW YORK TIMES

William G. Anderson, a doctor who in 1961 set aside his medical practice in Albany, Ga., to lead a movement against the city’s entrenched system of racial segregation, attracting national attention and the involvement of the Rev. Martin Luther King Jr., died Aug. 16 at his home in Detroit. He was 98.

His daughter Valé Henson confirmed the death.

The Albany Movement, a coalition of the city’s Black and civil rights groups, appeared at a pivotal moment in the struggle against Jim Crow segregation, coming between early successes like the Montgomery bus boycott of 1955-56 and later triumphs like the Birmingham campaign and the March on Washington, both in 1963.

With Dr. Anderson, an osteopath, as its leader, the movement in Albany pushed for integration of local businesses and tested federal laws against discrimination in interstate bus travel. Over the course of a year, the police arrested some 1,200 demonstrators who belonged to the movement, including Dr. Anderson, who was briefly jailed.

As the arrests mounted and

national news media swarmed into town, Dr. Anderson decided to call an old friend, King, for assistance. “I realized that I got all these people into jail; now how am I going to get them out?” he told the McClatchy news service in 2009. “I realized, I’m in over my head.”

King and his lieutenant Ralph Abernathy spent months organizing in Albany and were arrested alongside Dr. Anderson.

Although Dr. Anderson had been born in the nearby city of Americus, Ga., he had received his medical training in the north and had only recently returned to Georgia to practice. He chose Albany because it had few Black doctors.

He had not been active in the Civil Rights Movement until that point, but he felt compelled to address the blatant racial injustices that hindered his ability to provide medical treatment. As a Black man, he could not practice at the hospital, the only one in town — even though white doctors often refused to see Black patients or did so only reluctantly.

He did most of his work through house calls, visiting homes that often lacked running water and electricity. On one occasion, he delivered a baby at

night, under the illumination from the headlights of his car parked outside.

In early 1961, a group of young activists from the Student Nonviolent Coordinating Committee came to Albany to organize a movement. Though they faced resistance from the Black establishment, they found ready recruits among Albany’s restive youth, who began testing segregation through actions like sit-ins and were arrested in the process.

“I came out of my office and, after watching these kids be intimidated, I went and started marching,” Dr. Anderson said in a 2019 interview with The DO, a publication about osteopathy. “They weren’t marching for themselves; they were doing it for myself, my family, my patients, and my community.”

That fall, several Black organizations, including the NAACP, met to discuss an alliance, which they called the Albany Movement. They elected Dr. Anderson as its president; the gathered leaders felt that, as a doctor serving exclusively Black patients, he was somewhat insulated from white reprisals.

Dr. Anderson proved an effective spokesperson for the Albany Movement. He undertook

an extensive speaking tour of the West Coast, and in 1962 he went on the NBC Sunday talk show “Meet the Press” to explain the movement’s goals to millions of viewers.

When one panelist, James J. Kilpatrick, an ardent segregationist who was editor of The Richmond News Leader, asked him whether Black protesters had “invited” their arrests, Dr. Anderson pushed back.

“Yes,” he said, “if expressing your constitutional rights is inviting arrest, then yes.”

When King and Abernathy left Albany in the summer of 1962, King said that the movement had failed in the face of a wily local white police chief, Laurie Pritchett, who refused to be baited into using violence against protesters.

Dr. Anderson and other organizers saw things differently. Over the next few years, away from the glare of national attention, Albany’s white establishment quietly dismantled many of the city’s most flagrant segregation laws and allowed Black candidates to run for local office.

William Gilchrist Anderson was born in Americus on Dec. 12, 1927, to John Anderson, who worked in insurance, and Emma

(Gilchrist) Anderson, who was an administrator with the school system in Sumter County, where Americus is located.

He was 15 when he entered Fort Valley State College (now Fort Valley State University), a historically Black institution in Fort Valley, Ga., but in 1944 he left to enlist in the Navy, where he served as a medical corpsman during World War II.

After his discharge, he married Norma Lee Dixon, who also became a civil rights activist, in 1946, and attended the Atlanta College of Mortuary Science. During that time, he befriended King, who was studying at nearby Morehouse College and had been a childhood neighbor of his wife.

In 1949, Dr. Anderson received a bachelor’s degree in biology from the Alabama State College for Negroes (now Alabama State University). Seven years later, he received a doctorate in osteopathy from Des Moines University in Iowa, and, after a year’s residency in Flint, Mich., he settled in Albany.

His wife died in 2007. In addition to Henson, Dr. Anderson is survived by four other children, A. Laurita Faison, William Anderson II, Frank Anderson, and

Darnita Anderson Hill; 10 grandchildren; and seven great-grandchildren. Three of his children and three grandchildren have degrees in osteopathic medicine.

After the Albany Movement ended in 1962, Dr. Anderson and his family moved to Detroit, where he became the city’s first Black surgical resident and later opened a surgical practice. He taught at the Michigan State University College of Osteopathic Medicine and, in 1994, became the first Black president of the American Osteopathic Association.

As a result of his conviction for obstruction of justice during the Albany protests, Anderson was a felon — a mark of distinction, he said, for his service to the movement.

“My involvement with Martin Luther King Jr. and Ralph David Abernathy earned me this dubious distinction,” he wrote in his 2025 memoir, “The Making of a (PARDONED) Felon During the Civil Rights Movement in America: The Physician Who Helped Heal American Democracy.”

“It is a badge I have worn proudly, as have many others who participated in the civil rights movements of the 1950s and 1960s,” he wrote.

In bid to boost Boston’s housing supply, mayor proposes tax relief

Short-term action could jumpstart more than 1,000 units

By Andrew Brinker
and Catherine Carlock

GLOBE STAFF

Mayor Michelle Wu Monday proposed short-term tax relief for a handful of market-rate housing projects, in a bid to jumpstart the city’s sluggish development pipeline and speed at least 1,400 new units into construction by 2027.

The tax breaks, proposed for four projects that have already been approved by the Boston Planning Department, are part of a broader effort that will see officials deploy “targeted, time-

limited tax abatements” for residential developments 100 units or larger that have been unable to break ground due to financing constraints. The total tax relief for those four projects will be worth roughly \$31.5 million, city officials said.

“Residents urgently need more housing now, and we can’t afford to let approved projects that are ready to build remain stalled because of today’s tough economic headwinds,” Wu said. “Boston is open for business and we’ll keep using every tool available to get more housing built for our residents.”

The proposal will be considered by the BPDA board in October after a 30-day public comment period. It marks a distinct shift for Wu, who in 2023 briefly considered tax breaks for newly built market-rate housing projects before backing away from such a move. Her approach to housing has instead focused heavily on boosting the production of subsidized homes in the city, and some developers have complained that those policies have contributed to their financing difficulties.

TRENDLINES

By Larry Edelman

GLOBE COLUMNIST

Welcome to the next — and likely final — round in the legal fight over an abandoned industrial site on Chelsea’s waterfront.

In one corner, the local favorite: the Massachusetts Audubon Society, which bought the crumbling former home of Forbes Lithograph Co. and is in the early stages of remaking it into a public park and nature preserve flanked by affordable housing.

In the other corner, the heavy: Jianfeng He, an Australia-based businessman who was unknown here when he acquired the property in 2014. A decade lat-

er, a court-appointed receiver took control of the 18-acre site after the City of Chelsea declared it a public health and safety hazard.

The receiver, L. Alexandra Hogan, was tasked with making the property safe and finding a buyer.

In the two years since, Jianfeng He, who goes by Ken, has lost several courtroom efforts to reverse Hogan’s 2024 sale of the property to the Mass Audubon group. His claim: Hogan handed his property to Mass Audubon for far less than it’s worth.

The latest: The deal closed in March, but the former owner won’t throw in the towel.

BOLD TYPES

Cabot expands into lithium-ion battery sector

Under Erica McLaughlin, set to become CEO in October, the company will invest in two US plants

By Jon Chesto

GLOBE STAFF

Cabot Corp. rose to prominence in the 19th century by making an important product, carbon black, for a then-emerging industry: rubber car tires.

Cabot’s factories still crank out the material for the automotive industry. But Cabot is finding a relatively new growth opportunity in a modern-day emerging sector: lithium-ion batteries. And **Erica McLaughlin** will be leading the way for the Boston company’s foray.

McLaughlin, currently the chief financial officer, takes over as chief executive on Oct. 1 for **Sean Keohane**, after his retirement. Under McLaughlin’s watch, the company will invest \$125 million in two US manufacturing plants to ramp up its production of conductive additives used to make batteries more efficient for the automotive and utility sectors.

McLaughlin joined the company’s accounting department in 2002, back when Cabot was one of the few major businesses with offices in what is now known as the Seaport. Formerly with **KPMG**, she has gradually risen up the ranks at Cabot, before becoming chief financial officer in 2018, working closely with Keohane to set Cabot’s strategy and ensure it is carried out.

“Cabot has been a great place to develop and to move into new roles,” McLaughlin said. “I feel quite good about what I’m inheriting.”

As chief executive, McLaughlin will lead a global workforce of 4,100 people, with around 10 percent of that number based in Massachusetts: at the Boston headquarters, a research center in Billerica, and an inkjet plant in Haverhill. The publicly traded company reported nearly \$4 billion in revenue last year, and its

Report says Flock allowed access to city license plate data

By Yogev Toby

GLOBE CORRESPONDENT

Surveillance company Flock Safety allowed Boston’s license plate data to be accessed by outside law enforcement agencies during a pilot last year, against Boston’s wishes, according to a city report released Monday.

Boston adopted Flock’s automatic license plate reader system at no cost for a five-month pilot, according to the city’s 2025 Surveillance Technology Report. The city is required, under an ordinance, to report its use of surveillance technology annually.

In the pilot, 45 Flock cameras across the city took photos of each passing vehicle and logging its license plate, description, location, and a timestamp. Only a handful of trained Boston police detectives should have had access to search the database for law enforcement purposes, the report said.

The contract between the city and Flock stated that “data sharing was to be disabled, and BPD confirmed with Flock that settings were ‘off’ for sharing,” the report said.

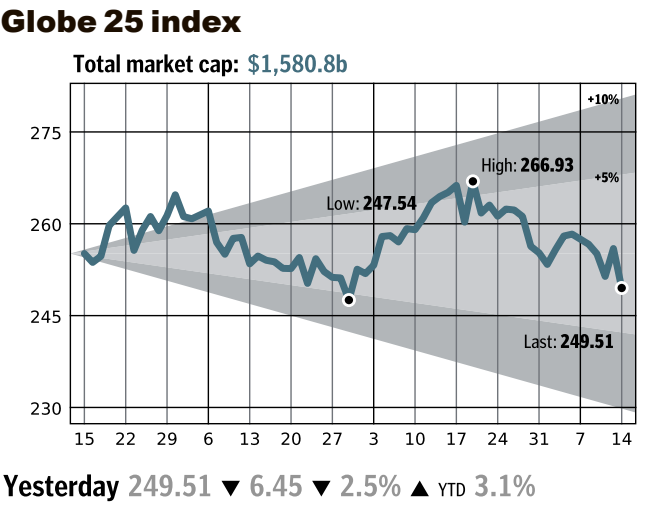

But three days into the pilot, Boston police learned that

Investors wary as AI risks mount

Artificial-intelligence stocks slid worldwide Monday after leaders of the industry warned a slowdown is needed for the safety of humanity. Another jump in oil prices, meanwhile, briefly sent the yield of the 10-year Treasury to 5 percent for the bond market's latest pressure-raising milestone. AI stocks have been under pressure a while because of worries their prices shot too high in the frenzy around the technology. The concerns jumped to another level over the weekend after one of the industry's leading voices, Anthropic CEO Dario Amodei, called for a deliberate and global slowdown in the development of AI. He cited safety issues, including the risk that AI becomes capable of leading a swarm of agents that could take over the entire internet within six to 12 months. Nvidia, whose profits have soared because its chips are helping to train AI models, sank 3.4 percent. SpaceX, which gets a chunk of its business from AI, fell 2 percent after Elon Musk said he agrees with Amodei. Softbank Group, the Japanese giant that is a major investor of OpenAI, lost 10.7 percent in Tokyo after OpenAI's Sam Altman likewise supported the concept of a slowdown.

Scholar Rock's SMA therapy approved

Cambridge-based drugmaker given OK from FDA

By Jonathan Wosen
STAT

Cambridge-based Scholar Rock on Friday received Food and Drug Administration approval for the first-ever therapy that targets the loss of muscle in spinal muscle atrophy, raising hopes that patients with the rare neurological disorder might have a better chance of moving and walking independently.

The FDA approved the drug, Isemyld, for use in adults and children 2 years and older who are currently receiving SMA therapies that target SMN2, a key gene for neurons that control movement. A late-stage clinical trial found that, when combined with an SMN2-targeting drug, Isemyld caused young patients' motor skills to improve after a year, while those in a placebo group declined, a difference that was statistically significant.

"Today's FDA approval of Isemyld marks a defining moment for the SMA community," said David Hallal, CEO of Scholar Rock, in a press release. "After decades of failed industry-wide efforts to unlock the potential of

DEMETRIUS FREEMAN/NEW YORK TIMES

The drug is the first-ever therapy for spinal muscle atrophy.

myostatin inhibition, Scholar Rock has delivered a therapeutic breakthrough."

The most common adverse reactions in the pivotal trial included coughing, headaches, and upper respiratory infections. Researchers did see an increased risk of fractures, some serious, in patients given Isemyld. The FDA's approval announcement noted that Isemyld may harm a developing fetus and affect reproductive function.

Pricing information was not immediately available.

The approval marks another step forward for patients with spinal muscular atrophy, a rare and progressive disease that destroys nerve cells that control speaking, breathing, and walking. Babies who go untreated usually die by the age of 2.

Outcomes have been transformed by the advent of drugs such as Spinraza and Evrysdi, which activate SMN2, a so-called backup gene that can help compensate for mutations that cause the disease. But while these drugs have been especially impactful for young patients with less advanced disease, those with advanced SMA can still lose motor skills while on SMN2 therapies.

Scholar Rock, a biotech with a market value of \$6.8 billion, set out to change that. To counteract the natural loss of muscle that accompanies SMA, the company's drug, which is an antibody, blocks the activation of myostatin, a protein that limits muscle growth.

In the biotech's pivotal trial, nearly 190 patients between the ages of 2 and 21, all of whom

were on SMN2-targeting therapies, were randomly assigned to one of three groups: monthly infusions of a low dose of Isemyld, a high dose, or a placebo.

When the researchers looked at 156 patients ages 2 through 12, they found that, after a year, 34 percent of participants on Isemyld but just 14 percent of those on placebo showed a clinically meaningful improvement on a standard assessment of motor ability, the Hammersmith Functional Motor Scale Expanded.

Scholar Rock's approval comes roughly a year after the FDA rejected the drug because of long-standing problems, including pests, at a contract manufacturing facility where the drug was packaged. The company removed the troubled manufacturing site from its application and switched to other manufacturers before refiling for FDA approval.

The biotech is also testing blocking myostatin in obesity, with the goal of offsetting the muscle loss often seen in patients taking blockbuster GLP-1 weight loss drugs. Last year, Scholar Rock reported mid-stage trial results showing that Isemyld helped preserve lean muscle mass in patients taking Eli Lilly's weight loss drug Zepbound.

Developer challenges Mass Audubon

►TRENDLINES
Continued from Page D1

Last week, the dispute reached the Supreme Judicial Court.

Representing He at the state's highest court, attorney Dana Curhan argued that Hogan failed to meet her fiduciary duty when she sold the site for \$8.36 million — well below its \$20 million assessed value — and ignored potential bidders willing to pay \$13 million to \$20 million.

Through Yihe Forbes LLC, He bought the site for \$11.6 million in 2014.

Chelsea, Hogan, and Mass Audubon "essentially say that our client is a bad actor that neglected its property and that it should be punished for its bad behavior by losing most or all of its equity," Curhan told me in an email after the SJC hearing.

Regardless of why the receiver was appointed, Curhan said, "there is a requirement that the interests of the property owner be considered — in fact, we contend that it is a primary consideration."

Why it matters: The SJC is being asked to rule on whether He's rights, as an owner, were violated.

Hogan promised to cooperate with the developer on the sale, according to John Ruggieri-Lam, another member of his legal team.

"Instead, we went down a railroad sale that was thrust upon us without prior notice when the receiver knew we had other buyers," Ruggieri-Lam said in an interview.

In a court brief, Hogan's lawyer said she kept Yihe's counsel fully informed of her work, and dismissed the argument that she breached her fiduciary duties.

"Contrary to the assertions of Yihe that the Receiver owed a direct fiduciary duty to it as the landowner, any fiduciary duties of the Receiver extend to the court itself and the receivership estate as a whole," Talia K. Williams wrote in a court brief.

Mass Audubon said in court documents Hogan's sale was the fastest, most reliable way to eliminate the ongoing public safety risks, and that the transaction should not now be unwound.

Zoom in: The Forbes site was Ken He's first Massachusetts project.

He spent several million dollars to put together a development plan: 585 residential units

combined with a small amount of commercial space at the confluence of the Chelsea and Mill creeks. The proposal, which had been scaled back in response to city and neighborhood concerns, was approved by Chelsea's Zoning Board of Appeals in 2019.

But when COVID hit, Yihe's primary source of funds — a hotel business in China — dried up, He said in an interview.

Citing inadequate maintenance and security, the Chelsea Board of Health determined in August 2024 that the property was "unfit for human habitation, posed a nuisance or risk of nuisance, and was a risk for accident to the public."

The next month, Yihe's lender, Shanghai Commercial Bank, filed a petition for receivership. In November, a nine-alarm fire burned through some of the buildings on the property, forcing the temporary closing of an adjacent commuter rail line.

That's when the city went to Suffolk Superior Court and received a judge's approval to name a receiver.

Ken He told me he believed the receiver's job was to correct the site's health and safety issues.

"I didn't expect them to sell it. We were selling the property at that time," He said.

Final thought: Mass Audubon — which is working with GreenRoots, an environmental justice nonprofit, and The Neighborhood Developers, a community development corporation — has spent \$700,000 since taking ownership of the Forbes property in March to secure the site and begin preliminary cleanup.

It has raised \$27 million of the estimated \$70 million needed for the project and is aiming to open the park for Earth Day in April 2029, according to David O'Neill, Mass Audubon's chief executive.

O'Neill said he's confident the organization can raise the rest of the money from private donations, state and city grants, and the sale of 2.5 acres of the property to The Neighborhood Developers, which will build up to 225 units of housing.

"We are off and running," O'Neill told me.

Whether the project crosses the finish line, however, is now in the hands of the SJC.

Larry Edelman can be reached at larry.edelman@globe.com.

Flock said to allow access to license plate data

►FLOCK CAMERAS
Continued from Page D1

other law enforcement agencies had access to license plate and vehicle information collected in the city, according to the report.

The report said the data was shared using a "nationwide lookup" feature that was "enabled by the vendor in error." The report does not say whether any agencies accessed Boston's data, and if so, which agencies did, or what they queried.

Flock is the largest manufacturer of AI-enabled license plate cameras, boasting a network of more than 120,000 cameras in 49 states. The cameras capture 20 billion license plate scans a month, according to the company. The surveillance network can be accessed by agencies through a nationwide database or direct sharing between departments.

Sharing data collected within an agency's camera network, however, is supposed to be optional. In BPD's case, it wasn't.

As soon as BPD discovered the data sharing, it directed Flock to disable that function just as the contract called for, the city and Boston police told The Boston Globe in a joint statement Monday.

"The City's use of technology to advance the safety and wellbeing of residents must also protect privacy rights and civil liberties, safeguarding the community trust that helps make Boston the safest major city in the coun-

try," the statement said.

City officials said they will cease Boston's use of Flock moving forward. The report adds that Boston police did not find records of complaints or misuse of the technology during the pilot.

Flock did not return a request for comment.

The company has faced a series of controversies over the past year, even as police have increasingly hailed its technology as vital for fighting crime.

Flock's license plate readers have triggered a backlash from communities across the country who criticize the surveillance network that can be accessed without a warrant or subpoena. The ease with which information is accessed and shared has allowed some police officers, including at least four in Massachusetts, to misuse it and track former wives or romantic partners.

ICE has also been able to access Flock data, according to published reports, though the company says it does not have a contract with the federal immigration enforcement agency.

As criticism intensified, a slew of cities and towns across the country hit the brakes on Flock. At least 25 municipalities opted out of their contracts with the company due to concerns over privacy, misuse, and lax oversight, according to the American Civil Liberties Union of Massachusetts.

"I've been doing antisurveillance work for over 15 years, and I've never seen the amount of energy that I'm seeing today on license plate readers across Massachusetts and across the country," said Kade Crockford, director for technology and justice programs at the Massachusetts ACLU. "This is grassroots. It is community-driven."

This year, Boston police adopted new pilots with Flock's competitors, Axon and Motorola Solutions. The Motorola pilot began in February of this year with 45 cameras, and the pilot with Axon launched in June with 30 cameras, according to the latest report. The report does not say whether the pilots are ongoing, but at least one Axon license plate camera was visible in the city last week.

Neither Motorola nor Axon would allow outside agencies to directly access Boston's pilot data, per pilot documents reviewed by the Globe, but law enforcement agencies can still ask the department to conduct a search on a case-by-case basis.

Boston city Councilor Benjamin Weber who serves as the council representative on the city's Surveillance Oversight Advisory Board, said the council will review the surveillance report and vote on new technologies the city adopts. The topic of license plate readers, he added, was "a gray area."

The city approved the use of license plate readers in 2022.

Since then, the technology evolved with the rise of artificial intelligence and greater surveillance capabilities. Now, even with sharing limitations, it is becoming harder to keep data secured, Weber said.

"[If] you set up a network of cameras around the city, and you're gathering information, somebody who you don't want to have that information will somehow get it," he said. "I don't know if there's a way to ever keep this information completely secure."

This is not the first time that actions by Flock unraveled the trust between an agency and the vendor. Last year, Cambridge terminated its contract with Flock over a "breach of trust" after Flock installed two cameras without the city's knowledge, attributing it to a preexisting work order. In Littleton this summer, Flock turned five cameras back on shortly after the city voted to shut them down during an inquiry. There, Flock said it was following its standard operating procedure.

"Silicon Valley's motto 'Move fast and break things' has done a lot of damage to our society," said Crockford, of the ACLU. "Flock . . . seems to agree that 'move fast and break things' is the way to do business, and we can see that that has really negative consequences."

TALKING POINTS

LABOR

EEOC SAYS CISCO LIKELY ALLOWED HARASSMENT OF PRO-PALESTINIAN WORKERS

Few issues have divided American workplaces in the past few years more than the Israeli-Palestinian conflict. At Cisco, the rancor spilled into internal message boards, where pro-Palestinian activists were derided as animals and one worker told colleagues to “quit living.” Now, in a rare move, a federal enforcement agency has found that Cisco likely failed to protect Muslim, Palestinian, and pro-Palestinian employees from harassment as they and their co-workers debated the Hamas-led attacks on Israel in 2023 and Israel’s military response in the Gaza Strip. In a letter dated June 9, a local director of the Equal Employment Opportunity Commission said that there was reasonable cause to believe that Cisco, which makes computer networking technology, “subjected a class of individuals to a hostile work environment based on their national origin (Middle Eastern), religion (Muslim), and/or their association with Muslim and/or Middle Eastern individuals.” The letter is not a binding ruling, and both sides said the EEOC has indicated it won’t file a lawsuit. But such findings tend to bolster employees’ cases if they decide to go to court on their own. Christopher Ho, a lawyer who brought the case to the EEOC on behalf of current and former Cisco employees, said they made the letter public last month after failing to make progress on a settlement with the company. “My clients felt like Cisco believed they were worthy of less protection,” Ho said. “This is a belated but welcome validation of the fact that what was going on with them is very illegal.” The case argues that the harassment continues. Robyn Blum, a Cisco spokesperson, said in a statement that the company disagreed with the EEOC finding and that it “thoroughly investigated all concerns and took appropriate action.” The finding is striking amid a shift in enforcement priorities by the Trump administration, whose EEOC chair has pledged to rein in what she sees as excesses in protecting certain minority groups.

AVIATION

AMAZON DROPS FLIGHTS WITH AIRLINE LINKED TO MIAMI CRASH

Amazon said it would temporarily stop transporting packages on 21 Air, the cargo airline that suffered a plane crash at the airport serving Miami last week, killing five people. “Safety has always been our top priority, whether in our own operations or when we’re working with partners,” Kelly Nantel, an Amazon spokesperson, said in a statement. “We’ve spent time supporting the investigation and reviewing some of the surrounding circumstances, and we’ve decided to pause our operations with 21 Air.” Two 21 Air pilots were operating a Boeing 767 on behalf of Amazon when the plane overshot a runway at Miami International Airport on Sept. 6, colliding with two vehicles, including a van owned by a cleaning company that serves airlines. Five people in the van died and five others were injured. “We remain focused on supporting the families and loved ones who were impacted by this accident, as well as working closely with the NTSB and all our partners, like Amazon, as the investigation continues,” 21 Air said in a statement, referring to the National Transportation Safety Board. “We are confident in our safety policies, procedures and training.” The company was operating Flight 7598 on behalf of Amazon Air, which uses several cargo airlines to operate planes on its behalf. Amazon said it expected its decision would have little if any effect on its customers. 21 Air also operates flights for DHL, the logistics company based in Bonn, Germany.

AUTOMOTIVE

COSTCO RAISES PRICE FOR MOTOR OIL, SETS LIMITS

Costco has raised the price of motor oil sold under its exclusive private-label brand as well as limited how much of it customers can buy weekly as oil prices climb yet again. Americans looking to try to save some money by purchasing motor oil to do their own oil changes may consider this yet another blow to their wallets, as they are already contending with high grocery prices and inflation worries. Costco’s Kirkland Signature full-synthetic motor oil 5-quart two pack now costs around \$58, well above the approximately \$30 it had been selling for just last year. Costco is also only allowing customers to purchase two boxes a week. The wholesale club operator is also limiting purchases of Mobil 1’s full-synthetic motor oil 1-quart six pack, which sells for about \$44, to five per membership. Costco did not immediately reply to a request for comment. Today’s synthetic motor oil is heavily dependent on Group III base oils, which are mostly made from refining crude oil. It’s estimated that the United States imports more than 40 percent of these oils from the Middle East, which has been dealing with disruptions to oil supplies since the start of the Iran war earlier this year. The price for a barrel of Brent crude went above \$109 on Monday morning as fighting in the Middle East keeps squeezing the global flow of oil.

LEGAL

ABBOTT AGREES TO SETTLEMENT OVER CLOSURE OF LARGEST BABY FORMULA PLANT IN UNITED STATES

Abbott Laboratories will pay \$385 million to resolve claims tied to an investigation of contamination at a baby formula factory in Sturgis, Mich., the largest in the country, which led to the supply shortages in 2022. Problems at the facility prompted a lawsuit by the Justice Department and recall of powdered infant formula at the facility. The recall covered several infant formula brands, including Similac, and squeezed inventory that had already been strained by supply chain disruptions and stockpiling during COVID-19 shutdowns. The settlement, which Abbott says does not represent any finding of fault or liability, also pertains to lawsuits filed by certain relators and the Attorneys General of several states. Abbott said on Monday that tests by government regulators of unopened product from the homes of the infants under investigation at the time of the 2022 recall were negative for Cronobacter sakazakii, a bacterium that can cause illness in infants. The company also said that no unopened, distributed Abbott infant formulas have ever tested positive for Cronobacter sakazakii. The Justice Department under President Donald Trump closed its criminal investigation into the matter.

MEDIA

THE BARI WEISS ERA OF ‘60 MINUTES’ BEGINS

The Serious Newsperson cast of correspondents was different — goodbye, Scott Pelley; hello, Ross Douhat — and the production values seemed glossier, a little more Vice News than Huntley-Brinkley Report. But for all the Sturm und Drang that has surrounded “60 Minutes” since the arrival of CBS News’ high-profile editor-in-chief, Bari Weiss, the version of America’s most watched news program that returned to CBS on Sunday looked a lot like the show viewers have come to expect. Norah O’Donnell landed a gripping interview with an Air Force colonel who recounted his harrowing rescue from behind enemy lines after being shot down over Iran. Lesley Stahl presented an investigation into mid-dlemen who charge large sums to lobby for presidential pardons. A lighter segment profiled Sean McVay, the coach of the Los Angeles Rams. There were some changes. The pardon segment revived the use of a hidden camera, a once-common technique at “60 Minutes” that had dwindled in recent years. The show’s signature ticking stopwatch received a makeover. And for those wondering how the new season would treat President Trump, the program referred to the war in Iran as “costly and unpopular,” and said he had pardoned “a string of unrepentant financial con men,” as well as “rioters” at the United States Capitol on Jan. 6, 2021. The formula of politics, sports and accountability journalism was the same mix that has frequently kept “60 Minutes,” 59 seasons in, among the 10 most watched network shows of the week. Off-camera, however, the season premiere came after a period of wrenching change at the program that threatened its reputation. Weiss purged the program’s senior leadership this year, and many star correspondents, including Pelley and Anderson Cooper, either quit or were forced out. Some of those who exited said Weiss tried to inject political bias, a claim that CBS News has denied. As a result, Weiss and her pick to oversee “60 Minutes,” technology journalist and filmmaker Nick Bilton, zeroed in on the season premiere as a critical test to placate skeptical viewers — and media executives who wondered why Weiss had insisted on overhauling CBS News’ most successful franchise.

Cabot expanding into lithium-ion batteries

► **BOLD TYPES**
Continued from Page D1
current market value is around \$4 billion as well.
When she takes over at the end of the month, McLaughlin will be the ninth chief executive in the company’s 144-year-old history — and the first woman in the role.
“To be able to lead this company is a great honor for me,” McLaughlin said. “Evolving the company, as we think about this ‘next generation economy’ — batteries, energy storage, the buildout of data centers. . . . I really look forward to building [Cabot] into a greater company over my tenure.”

Healey huddles with biotech
The biotech industry is in full swing, with deals activity happening at a breakneck pace and investors’ dollars pouring into new treatments. But there’s one important segment getting left behind: early-stage firms.
That’s why Governor **Maura Healey** and her economic development secretary, **Eric Paley**, huddled with a few dozen chief executives of young biotech startups last week at **MassBio**’s headquarters in Kendall Square. Also on hand: **Kirk Taylor**, chief executive of the quasipublic **Mass. Life Sciences Center**, through which many of the state subsidies for the biotech sector flow. Healey later told reporters that state officials should consider increasing the state assistance available for early-stage biotech startups, given the financial challenges they face.
Paley and Taylor are updating the strategic approach for the Mass. Life Sciences Center, and want to use the input they gleaned to tweak its incentives. The hope is to come up with more grants for these younger biotech startups, in particular to support them through expensive clinical trials, as well as working with another quasi-public, **MassVentures**, to help commercialize more university research.
“Massachusetts has an unbelievable pipeline of research,” Paley said. “We’re not getting enough of it out of the labs.”
For **Ben Pope**, founder of **MelliCell**, a Newton biotech working on a pill to treat the Fragile X syndrome that can cause autism, it was refreshing to hear state officials so engaged on these issues. “I really appreciate them recognizing,” Pope said, “that our success is what will drive Massachusetts to continue to dominate in this space.”

Davey gets a pay bump
Rich Davey will find out later this month how Logan Airport scores on the latest **JD Power** ranking of customer satisfaction.
But the **Massachusetts Port Authority** chief executive just received a different kind of evaluation, from Massport’s board of directors. Last week, the board unanimously approved a 6 percent raise, bringing his salary for this fiscal year to \$481,000, and awarded him a bonus equal to 10 percent of his salary.
Since returning to Boston from **New York City Transit** two years ago, Davey says he’s been focused on improving the customer experience at Logan, while balancing security and safety. The most well-known evaluation of airport customer experience comes from analytics firm JD Power, which last September ranked Logan 10th in its mega-airport category.
Davey won’t be satisfied until Logan is in the top five. Toward that end, Massport revamped many bathrooms, improved food options, and launched a popular remote terminal program in Framingham (with a similar project in the works for Braintree), among other changes. The numbers of flights and passengers are relatively steady this year compared to last year, so far, per Massport’s statistics. But from the metrics that board chair **Patricia Jacobs** is looking at, Davey is flying high. “The results speak for themselves,” Ja-

cobs told Davey before the vote, “nothing short of spectacular.”

Tropical’s owners sell — to the workers
When brothers **Ronn Garry** and **Randy Garry** started chatting about a succession plan for **Tropical Foods**, their grocery store near Nubian Square in Roxbury, they thought about selling to a competitor. They worried, though, about what might happen to Tropical’s 100 workers if a chain bought Tropical. So the two brothers decided to sell it to the employees instead.
To help line up financing, Tropical turned to **Apis & Heritage**, a foundation-backed investment firm that specializes in arranging employee buyouts to protect blue-collar jobs. Now the company’s newly created Employee Stock Ownership Plan holds a majority stake, with a trustee overseeing the shares for the ESOP.
Tropical’s new board will feature two seats for Washington-based Apis & Heritage, one for Ronn Garry, and one for an outside adviser. Ronn Garry said his brother will exit in six months, while he’ll leave in around 18 months, after helping to find a general manager to replace him. He plans to stay on the board for five years.
Choosing the ESOP route gives employees a stake in the company’s future while also ensuring stability after the brothers’ departure.
Rumors had circulated that the brothers had put the business up for sale, so employees were nervous when they headed over to the nearby **Residence Inn** in waves for meetings on Aug. 31. The relief, Garry said, was palpable when they were told not only was no one losing their job, but they’re now going to be owners in the company.
“By the end of the day, when the last group came in, and they heard from the previous groups what was going on, . . . it was a very different feeling,” Garry said.

Boston Casting scores with ‘Widow’s Bay’
For one glorious evening **Lisa Lobel** and **Angela Peri** mingled among Hollywood stars, as they received their first Emmy award, for casting work behind the hit series “Widow’s Bay.”
It was a long road to the **Peacock Theater** in Los Angeles for Lobel, Peri, and their firm **Boston Casting**. When they started the firm three decades ago, the bulk of TV and movie work in Greater Boston consisted of brief exterior shoots. But business picked up after state lawmakers adopted and later expanded the state’s film tax credits.
Lately, Lobel, Peri, and their local colleagues have been busy with shows and movies such as “Julia,” “Coda,” “The Holdovers,” “Tony,” “Kevin Can F**K Himself,” and “Dexter: New Blood.”
Then there’s “Widow’s Bay,” Apple’s horror-comedy set in a coastal New England town. Its first season was shot in Massachusetts last year. Lobel says Boston Casting handled more than 80 speaking roles for the show, which stars **Matthew Rhys** as the titular town’s mayor. Boston Casting worked with casting director **Allison Jones**, a Needham native who made it big in Hollywood. They shared the Emmy win with Jones and **Emily Buntyn**, a casting associate at Jones’s namesake firm.
The Emmy awards are spread over three nights; casting was up on night two, on Sept. 6.
“Widow’s Bay” is the kind of quirky show that might not have clicked if not for the genuine New England locales — and genuine New England supporting actors. “The feeling of the New England coastal town is really special,” Lobel said. “You have to live here, and live it, to know how to make it feel real.”

DAVID L. RYAN/GLOBE STAFF/FILE

Construction in March of 335 Bennington St.- 419 Bremen St. in Boston. Mayor Michelle Wu has proposed short-term tax relief for a handful of market-rate housing projects.

Wu proposes short-term tax breaks to boost housing supply

►ABATEMENTS
Continued from Page D1

Boston relies heavily on tax revenue from development to balance its budget, and the construction of new homes has fallen off significantly over the last few years amid rising interest rates and construction costs. Today, thousands of units permitted by the city are stalled because developers can't finance them. Only two projects of 100 units or more started construction in 2025. The challenges are so significant that city housing officials are considering lowering their housing production target for Wu's second term, The Boston Globe reported last week.

Meanwhile, rents and home prices have continued to rise as demand outpaces supply, and political pressure to address the cost of housing has ratcheted up.

With the new proposal, Wu is throwing financial help to market-rate housing developers. It is an indication, advocates and officials said, that her administration is willing to work with developers to get housing built.

The four projects for which Wu proposed relief Monday include: a 16-story, 408-unit development across from the Sullivan Orange Line station in Charlestown, a 16-story, 318-unit project on Pratt Street in Allston, a 333-unit development on Leo Birmingham Parkway in Brighton, and a 341-unit mixed-use project across from the Mass. Pike near Boston Landing.

With the tax break, New England Development would aim to start construction on the next phase of work at Allston Yards, said John Twohig, the company's executive vice president, in a statement.

"In this difficult fiscal climate, we have been working hard to find a path to deliver more housing at Allston Yards," Twohig said. "The city's proposed abatement is a critical tool to help move that housing forward."

Representatives for the other three developers behind the projects that could receive tax breaks — Fulcrum Global Investors, Hines, and Nordblom Co. — did not respond to requests for comment by press time.

Kairos Shen, the city's planning chief, said Monday that tax incentives will only be available on a limited basis, and that any such relief would be "modest and prudent." City officials are only considering abatements for large projects that meet the city's subsidized housing and energy-efficiency standards,

and are "right on the goal line" of working out their financing, Shen said, and would be able to begin construction in 2027 with the help of a tax break.

And officials will closely review projects to ensure developers aren't receiving more relief than they need.

Shen said the mayor "recognizes that this is a difficult and in some respects unprecedented economic time, and that we have data that have shown that it is time for us to deploy this last sort of tool that we have available to get construction going."

"The goal is to let people know that Boston is interested in investment and that we're really open for business, but we're going to be prudent in making sure that this is something that can actually lead to action," Shen said.

In total, Wu is willing to spend around \$100 million on tax relief, which officials believe could accelerate as many as 4,000 units. Officials are currently in discussions with around one dozen other projects about the prospect of relief.

There are 47 projects in the development pipeline 100 units or larger that could meet the city's criteria for relief, but Shen said a fair number of those have financing gaps too large to be jumpstarted by the level of aid officials are willing to offer.

Currently, the administration is offering two tracks of abatements, both of which would allow projects to keep their property tax rate as-is during a roughly three-year construction period. A shorter-term option would increase property taxes by a flat 2.5 percent rate for five years after a project finishes construction, while the longer-term option would allow for a tax rate that starts lower and ramps up over a 10-year period.

The Pratt Street project in Allston, which is being developed by Houston-based Hines and Framingham-based Calare Properties, is the only of the four projects that chose the longer track.

Nearly three-quarters of the city's operating budget comes from property taxes, and commercial buildings like offices have lost value for the last two years running. Amid a development slowdown, the prospect of forgoing revenue could raise eyebrows. But city officials said the agreements would not result in any revenue loss because they only constitute temporarily delayed tax increases, as opposed to reducing a property's tax bill. And when the projects are eventually built and paying their full bill, it will bolster the city's tax

base.

In other words, the city is forgoing some revenue in the short term to bring in more in the future.

"It's really important that the city is always increasing our tax basis," said Sheila Dillon, Boston's housing chief. "We're really creating basis for future generations. . . . We're not collecting taxes right now, but we really are setting up for financial health down the road."

Giving tax breaks to developers is inherently a tradeoff, but in the midst of a housing crunch, that tradeoff is well worth making, said Josh Zakim, a former Boston city councilor and head of the advocacy group Housing Forward MA.

"From a public policy perspective, the biggest need right now in the City of Boston is more housing," said Zakim. "So giving a little help right now for something that is undeniably for the public good is what the government is here for."

The offering is modest, but appreciated, said Tamara Small, the chief executive of CREDA Massachusetts, a commercial real estate industry group.

"It has become crystal clear that developers of market-rate housing are simply unable to build housing in Boston," Small said. "We would hope that, looking forward, recognizing the housing crisis that Boston faces, the city continues to think creatively on how we can jumpstart housing production."

Some developers have been skeptical of short-term tax breaks. The Globe reported in June that some developers considered a five- or 10-year term to be too short to make a significant difference in whether their projects were financially feasible. In 2023, the Wu administration announced deep tax breaks for projects that would convert defunct offices into apartments, with developers eligible to reduce property taxes by up to 75 percent for as long as 29 years. Some of those projects have now started construction.

The hope, officials said, is that the relief proposed Monday could be similarly effective at getting shovels in the ground.

"The key is to try to jumpstart construction," Shen said. "We need more housing, and we're sitting on this pipeline, and . . . the mayor wants us to actually get these housing units built."

Health Connector enrollment opens as many to lose coverage

Some migrant groups, though, remain eligible

By Alison Kuznitz
STATE HOUSE NEWS SERVICE

Residents who get insurance coverage through the Massachusetts Health Connector will need to navigate plan disruptions, higher premiums, and the potential loss of federal subsidies as they gear up for open enrollment next month.

The complex landscape, fueled by escalating health care cost pressures and policy shakeups in Washington, follows last year's tumultuous open enrollment cycle when the Healey administration had to inject \$250 million into heavily subsidized plans to stanch premium hikes from expired federal tax credits.

For 2027, residents enrolling in unsubsidized nongroup plans will see an average 12.4 percent premium increase after taking into account "member aging," according to a presentation Thursday from Connector program and product specialist Monica Smolinski. At a board meeting, she framed that rate hike in the broader context of the merged market, where many individuals and small businesses get coverage, after the Division of Insurance in July approved an average premium jump of 10.4 percent.

The escalating premium costs will pose a "really difficult and huge impact" on Connector enrollees, Connector board member Becca Gutman said.

Under the state's individual mandate, residents must have adequate health insurance coverage or face a tax penalty. But surging premiums and high-deductible plans with steep out-of-pocket costs are forcing Bay Staters to delay seeking care, and Governor Maura Healey's Health Care Affordability Work Group has rolled out initial ideas to mitigate the affordability crisis.

Open enrollment launches Oct. 23 and runs through Jan. 23, 2027. Nearly 350,000 Bay Staters are currently enrolled in individual Connector coverage, said director of policy Signe Flieger.

About 30,000 to 35,000 lawfully present noncitizen enrollees are expected to lose their eligibility for federal advance premium tax credits on Jan. 1, which in turn will disqualify them from heavily subsidized ConnectorCare plans, Flieger said. That cohort will be allowed to purchase Connector

LEAH WILLINGHAM/ASSOCIATED PRESS/FILE

Connector executive director Audrey Morse Gasteier said insurers "don't make decisions like this lightly."

plans "at full cost," she said.

Flieger said other categories of immigrants — including Green Card holders, Cuban-Haitian entrants and COFA migrants from Micronesia, the Marshall Islands, and Palau — will remain eligible for federal subsidies. Connector board member Jonathan Gruber suggested developing targeted outreach for those groups to "highlight that they are not being kicked off."

"I worry we're going to lose a lot of those folks who think they're being kicked off when they're not," said Gruber, an MIT economics professor. He added, "There's a huge body of evidence that past efforts of this type have scared off people who didn't need to be scared off."

Connector members began receiving preliminary eligibility notices last month alerting them to changes, such as the loss of federal subsidies. Beyond changes linked to income level and immigration status, some members will need to respond to insurers discontinuing plan offerings.

Michael Katzman, the Connector's director of plan management and carrier relations, said "notable" changes for 2027 include Fallon Health reducing its service area to focus on central Massachusetts, a shift that will affect 15,200 enrollees. About 4,800 Tufts Direct enrollees will be affected as the insurer exits Berkshire County, where it's the cheapest carrier.

"In the coming months, we will be coordinating with the two carriers and conducting extensive outreach to impacted members to make sure they are aware of the changes and assisting them in selecting a new carrier that best meets their needs," Katzman said.

The Connector plans to automatically assign those members to a comparable plan at the lowest cost available,

though they can also shop for other options, he said.

Blue Cross Blue Shield of Massachusetts will no longer offer a PPO plan in the merged market, affecting about 1,740 Health Connector for Business members, according to Katzman's presentation. Harvard Pilgrim Health Care is also discontinuing an HMO plan that impacts about 840 non-group enrollees and 19 Health Connector for Business enrollees.

Blue Cross PPO enrollees will be transferred to a Blue Cross HMO plan, Smolinski said. Connector board member Eric Gulko, who's president of Innovo Benefits Group, warned that strategy may not work for all families — particularly those with college students living out of state.

"Let's say you've got a family in Massachusetts who has a 23-year-old kid who happens to live in Washington state. They're covered under the plan now because they can be," Gulko said. "If we map them to an HMO, that 23-year-old in Washington state shouldn't be eligible for the plan, right?"

Smolinski said Gulko was correct and that the student would need to shop for a different plan and carrier.

Group Insurance Commission executive director Matt Veno, who sits on the Connector board, asked fellow members to reflect on marketplace pressures driving the discontinued plans. Connector executive director Audrey Morse Gasteier said insurers "don't make decisions like this lightly" but are grappling with an "incredible number of cost pressures."

"As those changes start to pick up in frequency, I think it's fair of us to assume it's a signal," Morse Gasteier said. "It's a representation of the fact that carriers may be feeling like they need to make harder choices and are more willing to pull the trigger on disruption."

High court mulls hearing lobsterman's challenge to GPS monitoring of boats

By Patrick Whittle
ASSOCIATED PRESS

PORTLAND, Maine — The Supreme Court will decide later this month whether to hear a lobster fisherman's challenge to a government requirement that boats use electronic tracking devices. That case could have broad consequences for the American commercial fishing industry.

Maine lobsterman Frank Thompson filed a federal lawsuit against the head of his state's marine resources department over a requirement that he install a GPS tracker on his boat to keep his fishing license.

In 2023, the state, where lobster fishing is a critical and historic industry, required all federally permitted lobstermen to do so to comply with a new US rule aimed at data collection.

Thompson asserted that the monitoring constituted unreasonable search and seizure, but a federal appeals court denied his claim last year. He appealed to the Supreme Court, which is set to review the claim on Sept. 28.

"The petition asks whether Maine can force lobstermen to carry government GPS trackers on their private boats, even when they are off the job," said Matt Gilliam, Thompson's lead attorney. "We are hopeful that the court will grant review and address this important Fourth

ROBERT F. BUKATY/ASSOCIATED PRESS/FILE

The majority of the US lobster industry is based in Maine.

Amendment question."

Many US commercial fishermen are monitored at sea by human observers and electronic devices to collect data that regulators say is crucial to keeping the industry and fish populations sustainable and healthy. Fishing groups have used the courts over the years to try to curtail monitoring requirements with mixed results. Authorities have said the lobster boat monitoring program is important to improve understanding of the valuable crustacean's population at a time when it appears to be declining in New England.

A spokesperson for the Maine Department of Marine Resources declined to comment on Monday. Carl Wilson, the department's commissioner, said last year that the data from lobster boats is important to "mitigate economic harm to the industry" as well as to in-

form regulations.

Conservation groups have opposed efforts to scale back monitoring fishing boats at sea, which they see as important to protecting the broader ocean.

"Efforts to overturn a federal appeals court ruling don't change the fact that New England's lobster population has declined and fishery managers urgently need reliable and detailed data to respond to the complex issues facing our ocean," said Erica Fuller, senior counsel with Conservation Law Foundation.

The US lobster industry is based mostly in Maine, where fishermen caught more than 78 million pounds of the crustaceans last year. That was on par with the industry's typical annual catch in the 2000s but a sharp decline from a decade ago, when catches routinely topped 120 million pounds a year.
