Lawmakers demand nursing home details

Criticize Healey administration over lax enforcement, rubber-stamping deals

By Kay Lazar and Neena Hagen
GLOBE STAFF

Massachusetts legislators who have spent years seeking stronger nursing home oversight are de-

manding that the Healey administration explain why it keeps awarding new licenses to operators with poor track records.

“It’s depressing and scandalous,” said Senator Patricia Jehlen, a

Somerville Democrat, following a Boston Globe Spotlight Team report about out-of-state operators, many with troubling records, acquiring nearly one of every five homes in Massachusetts.

That report focused on 12 licenses handed to Eli Mirlis of New Jersey, chief executive of RegalCare, who aggressively cut spending at

his homes even as he transferred growing sums of nursing home funds into his related real estate and management companies. His homes in Taunton and Quincy went from five-star ratings to one-star a few years after he purchased them, according to federal assessments.

The story also looked at eight

SJC will review ICE arrests of defendants

Questions of jurisdiction complicate efforts by state to hold criminal trials

By Sean Cotter
GLOBE STAFF

The Trump administration’s aggressive deportation push is supposed to focus on “the worst of the worst,” immigrants with serious criminal records. Yet for dozens of immigrants facing criminal charges in Massachusetts, their arrest by federal immigration officials has unleashed chaos and confusion, leaving judges and lawyers grappling with a tangled web of open warrants and unanswerable charges.

The thorny issues raised by such cases land before the state’s highest court on Monday, as justices consider whether state district court judges can order US Immigration and Customs Enforcement to make detainees available for trial after they’ve been sent out of state, and what Massachusetts judges should do if ICE won’t let them show up.

The Supreme Judicial Court’s ruling will have sweeping consequences for how the Massachusetts criminal justice system interacts with the Trump administration’s federal immigration apparatus. A ruling, however, won’t come for a few months.

ICE is not legally required to follow orders issued by state courts, as Massachusetts judges have no jurisdiction over the agency. But state actions in criminal cases can alter immigration proceedings; if charges go away, so can the federal government’s reason for holding someone without bond.

“Normally, state actors don’t have the ability to directly affect federal immigration enforcement,” said David Rassoul Rangaviz, an attorney for a

At crossroads of privacy, protection

Some in policing resist halting Flock surveillance

By Yogev Toby
GLOBE CORRESPONDENT

By the time New Bedford city councilors learned their police had installed license plate cameras from Flock Safety — two years after the fact — the system had already been abused.

Two officers had searched records of their ex-romantic partners hundreds of times. Other police departments from around the country had searched the New Bedford database without needing warrants and with few checks on whether any of them were justified or properly done. The cameras had been up for two years with no notification, much less debate among the public.

Residents and some city officials were livid. “This technology has been running rampant without safeguards for the past two years,” New Bedford City Councilor Shane Burgo said at a Sept. 24 council meeting, where he presented an ordinance that would require police to obtain warrants for all searches and restrict record-sharing with other law enforcement. In the interim, the ordinance would ban all such cameras until guardrails are in place.

Similar backlashes against the technology have unfolded across the country in recent months, in part because of abuses by police officers similar to those in New Bedford, but also because in many cases they were installed under wraps, with little public notification.

Caitlin Fontecchio and her son, Vincent, in their Worcester home. The family has been hit hard by rising mortgage rates.

AS MORTGAGE RATES CLIMB, HOUSING CRISIS DEEPENS

Surge could add hundreds of dollars monthly, squeezing buyers

By Andrew Brinker
GLOBE STAFF

What Caitlin Fontecchio and her family have been attempting to pull off this year — selling their home in Worcester to buy a bigger, newly built house in nearby Warren — was already a delicate balancing act.

Then the global economy tipped the scales against her.

After steadily declining for more than a year, mortgage rates have soared in recent months, particularly in September, as the average on a 30-year fixed-rate mortgage is now at nearly 7.3 percent — the highest since 2023. The surge is adding potentially \$1,000 to a monthly payment for a typical home purchase in Greater Boston.

It’s a huge financial blow to prospective home buyers across Eastern Massachusetts. And suddenly, no one is coming to see Fontecchio’s home in Worcester. Two open

City abandons longer center bus lane for Columbus Ave.

By Diti Kohli
GLOBE STAFF

Since its debut five years ago, the center-running bus lane on Columbus Avenue in Roxbury has been lauded by Mayor Michelle Wu and the MBTA, who say the project helped speed up bus travel and slow cars.

But officials have scrapped longstanding plans to extend it by another mile in favor of a more traditional curb-hugging design, pivoting away from a concept that has caused an uproar in other closely watched transit projects, including along Blue Hill Avenue.

The Wu administration and the T altered the latest design for Columbus Avenue to instead include side-running bus lanes in both directions between Jackson Square and Ruggles Station, said Boston’s interim Chief of Streets

Contest puts Philly drivers in a tight spot

Aim is to crown the city’s best parallel parker

By Campbell Robertson
NEW YORK TIMES

PHILADELPHIA — As more and more daily tasks are taken over by the machines, a new-found appreciation has emerged for certain displays of human art and mastery. We speak, today, of parallel parking.

On Saturday afternoon in Philadelphia, before a panel of judges and a crowd of hundreds, 14 residents took turns angling into tight spaces in the city’s first parallel parking championship. Some contestants, like a city bus driver, were professionals, while others were in it for the love of the game. But none were particularly humble when it came to parking.

“I have a parking Instagram,” boasted Missy Philips, 35, a high school Spanish teacher who indeed has an account dedicated to photos of the tight spots she has parked in.

The event was organized principally by Adam Wodka, 42, the self-styled commissioner of the Philadelphia Parallel Parking Association. He and a friend had been discussing the frustration of nailing a parallel parking job, slipping immaculately between two bumpers, and realizing that no one was around to see it.

“It’s good to share,” Wodka said.

Parallel parking competitions appear to have originated in Pittsburgh. Dan Leber, 38, a general contractor, held the first contest there in 2021, measuring each contestant’s attempt by time and distance from the curb, with adjustments for the size of the car. The Pittsburgh competition remains a proudly DIY affair, with entry open to all and no sponsorships. So far, more than 600 people have taken part.

Leber, who says next year’s

Mary Zheng celebrated her attempt at parallel parking at Philadelphia’s championship event. Contestants were judged on various criteria, from how long it took them to how close they got to the curb.

contest may be his last, does not disqualify people for using backup cameras. But truly gifted parkers, he says, will beat the technology — Waymos included.

“Even if a self-driving car could park in a reasonably good time, it’s not going to win the competition,” he said. “A human’s going to win the competition because that human feels their car. Like the car is an extension of them. They get it. They get the flow.”

There are contests now, perhaps unsurprisingly, in Portland, Ore., and Austin, Texas. There was also a contest this year in Richmond, Va.

The Philadelphia version has official sponsors and an application process, with questions such as “What does parallel parking mean to you?” But backup cameras are not allowed in this one, giving the

contest an artisanal purity.

“There’s an element of this that is math, that is trigonometry,” Wodka said. He paused. “I don’t know if it’s trigonometry. But there is this science and feel.”

Out of more than 900 applicants, 15 were chosen to compete, though one did not show up to the event. Some decorated their cars with signs and props, including a giant inflatable rubber duck making an obscene gesture. Several made T-shirts. Mario Zucca, 46, an illustrator who went by the name “One-Shot Mar,” wore an Evel Knievel helmet and jumpsuit.

The drivers competed in three rounds:

— “One Shot”: pulling off a classic parallel park in a single attempt, judged by distance, in inches, from the curb.

— “Tight Squeeze”: maneuvering into a space only 18

PHOTOS BY MICHELLE GUSTAFSON/NEW YORK TIMES

inches longer than the driver’s car, judged by how many moves it takes and how often one bumps the cars that one is squeezing between.

— “Under Duress”: parking while navigating various obstacles of Philadelphia street life, such as a trash fire or a crowd yelling “Dallas Sucks,” judged by the final “parallelness.”

The crowd roared when drivers took a particularly adept angle, winced when they hit other cars, and, in between, murmured the usual unsolicited coaching of sidewalk parking spectators: “Turned too early.” “Too far, too far.” “OK, now bring it home.”

“It’s a generational thing,” said Jay Vereen, 41, of the unique appreciation felt for a superb parallel parking job. He does not judge people who use cameras, but he said he had no need of them, noting, “I grew

up with the rearview mirror, the arm behind the seat.”

The three top scorers went on to the Performance Dodge Ram Finals, where the panel of judges — a bar owner, a comedian, and a crossing guard who went viral for a TV interview he gave while eating an ice cream cone last May — decided the winner based on style points alone.

Zucca, driving a 2012 Mazda 3 hatchback with 155,000 miles on it, was the champion. He beat out a heavy equipment operator and a former driving school instructor, taking home a prize of \$76 — the cost of a parking fine in Philadelphia — and a trophy made of a piece of street curb.

The triumph of an amateur only reinforced the idea that parallel parking is an art — if perhaps, in the not-too-distant future, a lost one.

DAILY BRIEFING

Two killed as gunfire erupts at Ga. block party

Two people were shot to death in a hail of gunfire and nearly three dozen others were injured at a homecoming week-end block party early Sunday morning in southern Georgia, according to state law enforcement officials.

More than 1,000 people were gathered at the site, and more than 50 shots were fired in at least two locations about a block apart in Vienna, Dooly County Sheriff Craig Peavy said.

Peavy said people were “going every direction” and that, even while officers were on the scene, more gunfire erupted about a block away.

“We don’t know if it’s coming at us or someone else,” he said. “You just have to keep doing what you’re doing and hope you don’t get hit by gunfire.”

The incident took place over homecoming weekend for Dooly County High School. The shooting was not at a school-sponsored event.

Dooly County Coroner Brett Walls said the two men, ages 20 and 23, were pronounced dead at the scene with fatal gunshot wounds. He said multiple other people were also shot, calling the scene “horrific.”

Tenn. woman still unconscious after botched execution

Christa Pike has remained unconscious and on a ventilator at a hospital in the four days since her failed execution in Tennessee, and her prognosis might not be known for days more, one of her lawyers said Sunday.

Little has been released about Pike’s condition since Wednesday night’s execution attempt. She has since remained hospitalized under guard as doctors try to get the massive dose of the barbiturate pentobarbital out of her system.

Pike, now 50, was 18 when she and her boyfriend tortured and killed a classmate, Colleen Slemmer, in a jealous rage in 1995. She became one of the youngest women on death row.

Tennessee prison officials gave Pike two doses of the lethal injection drug on Wednesday night. The pentobarbital didn’t kill her, but her lawyers said her arms were burned and blistered from the caustic drugs.

It is unclear what will happen to the case. Pike’s lawyers have asked the governor to commute her punishment to a life sentence.

Ore. man trapped by boulder uses Siri to call for help

An Oregon man who was trapped under a boulder about the size of a Volkswagen Beetle used his wireless earbuds to place a call for help, police and the man’s mother said.

The man, Joseph Little, 28, had been fishing at the Hammond Marina in Warrenton, Ore., about 90 miles northwest of Portland, on Sept. 26. He was balanced atop an uneven band of rocks jutting into the Columbia River around sunrise.

A boulder dislodged and pinned Little’s torso and legs to the jetty, said Sergeant Dylan McCoy of the Warrenton Police.

McCoy noted that the boulder fell on Little near where high tide rushes over the rocks, and that Little could have drowned had help not arrived in time.

Little’s mother, Mindy Little, said on social media that her son could not reach his phone to call for help.

“He had those earbuds, and he was able to use Siri to call for help,” she said, referring to Apple’s digital assistant that responds to voice commands.

NEW YORK TIMES

A campus reckoning for everyone at Cornell

Sex assault case puts school in global spotlight

By John Leland
and Emma Goldberg
NEW YORK TIMES

ITHACA, N.Y. — Last week on the rolling campus of Cornell University, students were asking questions about their education that none hoped ever to raise. Did they want to be at a school where a woman said she was sexually assaulted by several men at a 2024 fraternity party, and none of the men faced criminal charges?

And after they had worked so hard just to get in, and paid the tuition of \$73,946 a year, would they lose the cachet of Cornell’s storied name on their resumes? Many students declined to be interviewed for this article, for fear of being associated with the scandal.

“Cornell is now known for this,” said Lewis Holland, a senior, his voice shaking.

He had cherished so much about the school: the idyllic campus in Ithaca, N.Y., with trees turning red and orange in the fall, the work ethic of the students who spend late nights in the libraries, his own research on 2D materials.

Now, the idyll is gone, he said.

In its place is a mess they did not bargain for, and which most did not create. There is a high-profile criminal investigation, made more prominent by the school’s Ivy League status, and renewed scrutiny of the campus’s long-criticized fraternity culture, where the drug ketamine seems to be an accepted social lubricant at some houses.

Like other campuses, Cornell has been riven by pro-Palestinian demonstrations and

charges of antisemitism, including an incident in which the university president bumped a student with his car. And like other Ivies, Cornell was already in the crosshairs of the Trump administration.

Last week, students and faculty were trying to find their way through the miasma. And they were doing so under the glare of global digital media, both formal and informal.

Many expressed sympathy for or outrage on behalf of the woman who said she was assaulted; others defended the men and put the blame on the woman.

Some of the most severe criticism fell on the local prosecutor and campus police for their handling of the rape accusations.

Donors have organized campaigns to curb gifts to the university. New York Governor Kathy Hochul last week denounced the local prosecutor and campus police force and appointed state Attorney General Letitia James to investigate the woman’s rape allegations. Some students are calling for the creation of a program that would allow survivors of sexual assault at Cornell to transfer to another Ivy League university.

For professionals treating the trauma of sexual assault, the case was a reminder of the grim statistic that, nationally, 1 in 5 female college students say they were assaulted during their years on campus — and most of these assaults go unreported, some for fear of exactly what has happened at Cornell. The university’s own survey last year found that 35 percent of undergraduate women reported having nonconsensual sexual experiences during their time there.

The seven men accused in the 2024 Cornell case have de-

nied the allegations, while the university, the fraternity, and prosecutors have said they responded appropriately given the information they had at the time.

For the university and its 27,000 students, the attention on the school “is going to cause a lot of damage,” said Jeff Hunt, a crisis consultant who worked with Penn State University after an assistant football coach was convicted in 2012 of sexually abusing 10 boys.

Hunt said the damage to schools involved in scandals could not be measured in donations or applications for admission, which tend to recover fairly quickly.

“It just kind of lingers,” Hunt said, coloring the way students and faculty think about the institution they are part of.

“It’s a reopened wound,” he said, referring to the renewed attention on the allegations, two years after the event. “And it just does a lot of reputational damage and will do so for as long as the wound remains open. And the question now is, what closes the wound?”

He pointed to two scandals that universities handled differently.

At Penn State, the university brought in Louis Freeh, a former director of the FBI, who investigated the case and produced a detailed report, which the school then made public. At Baylor University, where 15 women said they were sexually assaulted by football players between 2012 and 2016 and accused the school of protecting the athletes, the administration hired an outside law firm to investigate the allegations. But the university released only a condensed summary of the firm’s report.

“That just makes people think that there must have been

LAUREN PETRACCA/NEW YORK TIMES

“Cornell is now known for this,” said Lewis Holland, a senior at the prestigious Ivy League university.

a lot of *there* there,” Hunt said. “So I think that the principles of independence and transparency are critical in the moment.”

Cornell was already trying to heal from the convulsions that have roiled many universities since 2023, and political pressure that toppled the presidents of several Ivies.

At least 15 students had been suspended for participating in pro-Palestinian demonstrations, some for as long as three years. The protests, and the university’s handling of them, led the Trump administration to launch a civil rights investigation into allegations of antisemitism and to freeze \$1 billion in grants.

Then last April, after a debate about the conflict between Israel and Hamas, demonstrators surrounded the black Cadillac SUV of Michael Kotlikoff, the university’s newly appointed president. Kotlikoff was captured on video backing the car into one of the demonstrators and accused of running over another student’s foot. That student, who received his degree in May, was subsequently banned from campus for a year for his

role in the confrontation.

Kotlikoff, who had spoken at the event, later described himself as the victim of the incident, saying he had experienced “harassment and intimidation” that was aimed at “silencing speech.”

Some students and recent alumni last week said they saw a discrepancy between the university’s punishment of demonstrators and the seven students accused of sexual assault.

Caro Achar, a 2018 graduate, said that she felt “a mind-boggling level of dissonance” watching her alma mater “expel students for engaging in protest” two years ago — while allowing some students accused of sexual assault to remain on campus.

“It’s so hard to want to continue to engage as a lifelong Cornellian with an institution that I feel is behaving in such an incredibly hypocritical way,” she said.

The seven accused men in the 2024 case received punishments of varying severity from the university, including expulsion.

On Saturday, Kotlikoff appeared in a video in which he addressed the outrage on campus and among alumni.

“This is a defining moment in Cornell’s history,” he said. “We owe it to Jane Doe and to survivors of assault to get this right, and we must keep each other safe.”

At least one of the accused men was still on campus last week. The accuser, who is identified in her lawsuit as Jane Doe, is not at the school. None of the accused men has been charged with a crime, and all have denied wrongdoing. Four said that they had consensual sexual contact with the woman at the party, and the others denied participating.

Democrats shift talk on trans issues

Remain divided but responding more to attacks

By Tim Balk
NEW YORK TIMES

In Ohio, a longtime Democratic congresswoman in a tough race, Marcy Kaptur, is running an ad in which she says she thinks “boys should not play in girls’ sports” and that she is focused on “making your life more affordable.”

In North Carolina, a vulnerable Democratic congressman, Don Davis, has released a commercial that shows him stalking a football field and saying that there are “real concerns about fairness and safety” in youth sports and that there “should always be a safe and fair space for women and girls in sports.”

And in several of the country’s most competitive congressional battlegrounds, a leading progressive super political action committee is running ads describing Republicans as “obsessed” with transgender people and distracted from rising prices.

As the midterm election approaches, some Democrats in battleground races are moving to respond to Republican attacks casting them as extreme on transgender issues. In some cases, Democrats have reacted by accusing Republicans of being out of touch with voters’ economic concerns or desperate to change the subject. In others, Democrats have voiced their opposition to transgender female athletes participating in girls’ and women’s sports. At times, their opposition has drawn criticism from other Democrats.

The strategies show how the party has shifted on the issue

DANIEL PULLEN/NEW YORK TIMES

Representative Don Davis has said there “should always be a safe and fair space for women and girls in sports.”

since the last nationwide election — a pivot that has played out in various ways since 2025, when Governor Gavin Newsom, a Democrat from California considering a run for president, suggested that the participation of transgender athletes in women’s sports was “deeply unfair.”

Democrats remain divided on the issue. Many of the party’s candidates are wary of either angering the base by taking a position that would limit transgender rights or taking a position at odds with most voters, who polls show overwhelmingly agree with Republicans on the issue of transgender athletes’ participation in women’s sports.

But a number of Democrats are trying to actively parry Republican attacks, which haunted them in 2024, when Kamala Harris largely elected not to address a torrent of ads from Donald Trump that declared: “Kamala is for they/them. President Trump is for you.” Democratic strategists judged the ads to have been highly effective.

In the midterms, Republicans have again put the issue at the center of their message, part of a broader effort to cast Democrats as outside the mainstream. One ad, targeting Davis, said that the congressman was “fighting for they/them, not us.”

This time, Democrats are not letting the attacks go unanswered.

“For the first time ever, Democrats are strongly on offense on this,” said Christina Freundlich, a Democratic strategist. She add-

ed that, while approaches varied across the country, Democrats were broadly focusing on “clarifying the record — but then moving on to groceries.”

Republicans are still directing far more attention and resources to the issue. AdImpact, a media tracking firm, said on Friday that it had observed more than eight times as much Republican spending as Democratic spending on midterm ads focused on LGBTQ and transgender issues.

But Republicans have been unable to move the topic to the center of voters’ attention. A CNN poll last month found that “policies regarding gender identity and trans people” did not make the top 10 issues that were most important to voters. A Supreme Court decision in July upholding restrictions on transgender female athletes prompted a flurry of celebratory statements from Republicans, but scant expressions of disappointment from leading Democrats, depriving the GOP of a chance to highlight a contrast.

In bluer areas, Democratic voters have seemed less forgiving. Representative Seth Moulton, a Massachusetts Democrat who said after the 2024 election that he did not want his daughters “getting run over on a playing field by a male or formerly male athlete,” lost last month by 30 points in a primary against Senator Edward Markey. The senator focused heavily on the issue, accusing his challenger of throwing transgender children “under the bus.”

Polls: Governorships may flip

One month until Election Day, voter dissatisfaction with the economy, concerns about po-

POLITICAL NOTEBOOK

litical extremism, and frustration with President Trump have Democrats within reach of flipping four Republican-held governorships, opening a wide lead in Iowa and an expanding advantage in Ohio among likely voters, according to new polls by The New York Times and Siena University.

In Texas, Governor Greg Abbott, a Republican fixture in the state for decades, is now narrowly behind his Democratic challenger, Gina Hinojosa.

The Democratic candidate also has an advantage in the race for governor of Alaska. The only place surveyed where the Republican is ahead in the campaign for the governor’s office is Kansas, now held by a retiring Democrat.

The polls also show Democrats with an advantage in the Senate in these states, with Democrats ahead in Texas and Alaska, and with the edge in Ohio, while the races in Kansas and Iowa are neck-and-neck.

While national attention has fixated on the fight for control of Congress, governorships will be important heading into a wide-open presidential election in 2028. Not only will governors influence the electoral process, they will also help shape the redistricting wars that are likely to spill into 2027 and beyond.

The polling results underscore how Democrats have been able to push into states that have traditionally favored Republicans, as voters have soured on Trump amid frustration over the economy, rising gas prices, and a deeply unpopular war in Iran.

Still, the polls show that even as many of the Republican candidates for governor are at a disadvantage, they are outrunning the difficult political environment. Trump’s approval rating stands at just 40 percent across the five states. In four of five states surveyed, the Republican candi-

dates for governor are doing better than the president’s approval ratings.

Democrats, meanwhile, are boosted by broadly well-liked candidates who are, for the most part, seen as more politically moderate than their Republican opponents.

In Texas, for example, just 28 percent of voters worried that Hinojosa was too far to the left, compared with 45 percent who were concerned Abbott was too far to the right.

Abbott was expected to have an easy path toward reelection in a state that hasn’t put a Democrat in the governor’s office since Ann Richards, who served one term before losing to George W. Bush in 1994.

Hinojosa, an Austin lawyer and former school board president, has tried to turn the election away from national culture war issues toward affordability, support for public schools, and a backlash against the rapid construction of power- and water-hungry data centers.

The widest Democratic lead was in Iowa, where Rob Sand, the state auditor and the only Democrat holding statewide office, holds an advantage over Republican businessperson and farmer Zach Lahn to succeed Governor Kim Reynolds, a conservative Republican who is retiring after nine years in office.

Sand has built his campaign around a bipartisan persona and a promise to address government accountability and the economy. He’s benefiting from high voter appeal: More than half of Iowa’s likely voters view him positively, including more than 20 percent of Republicans.

Since June, Sand has grown his support across nearly every demographic group. He is ahead among voters over 65, a group that typically tilts Republican.

Trump names Clayton to lead new federal AI task force

WASHINGTON — President Trump on Sunday tapped Jay Clayton, his director of national

intelligence, to lead a new government task force on artificial intelligence.

Trump is calling it the “Super Intelligence Force,” because he has tried to rebrand AI as “super intelligence.” The announcement comes after Trump hosted top executives of AI companies at the White House last week and said they had signed a voluntary accord that would effectively self-police the development of the technology.

The task force will coordinate the federal effort “to ensure that America continues to lead the World in Super Intelligence, which many say is bigger than the Industrial Revolution, and the Internet, and will protect the interests, and improve the lives, of all Americans,” Trump said in a post on social media Sunday.

Noem’s agency gave donor contract just before she left

WASHINGTON — In the last hours of Kristi Noem’s tenure as Homeland Security secretary, her agency delivered a windfall to one of her political donors by buying five airplanes from the man’s firm at a substantial markup, documents show.

The Department of Homeland Security agreed to pay the donor’s firm \$108 million for a Boeing 737 airliner that had been converted into a massive private jet, complete with a stand-up bar, two bedrooms, marble showers, and a table covered in manta ray skin.

The firm, Daedalus Aviation Corp., had bought the same plane a few months earlier from a seller who had asked for less than \$90 million, according to documents reviewed by The New York Times.

At the same time, the agency agreed to buy two smaller Gulfstream luxury jets at prices that also seemed to yield a hefty profit for the seller. Daedalus spent about \$83 million to buy the pair, but resold them to the agency for \$106 million, the documents show.

UP CLOSE — Members of Castellers Colla Vella formed a “castell,” or human tower, during the 30th Concurs de Castells, or Human Tower Competition, in Tarragona, Spain, on Sunday. The tradition began in the 18th century and encourages teams to compete to build the tallest and most complex structures.

US removes all bombers from British air base targeted in terror plot

WASHINGTON — The US Air Force has brought home its bombers stationed at a US-run military air base in England used to strike Iran following an investigation into a planned terror attack at the RAF Fairford base.

The bombers were redeployed back to their home bases in the United States, according to a Pentagon official who was not authorized to discuss sensitive military movements and spoke Sunday on condi-

tion of anonymity.

Aviation watchers such as the Military Air Tracking Alliance have observed dozens of B-52 and B-1 bombers operating out of RAF Fairford since the opening days of the Iran war. Observers noticed a host of B-1 bombers fly out of the base on Sunday.

The move comes as President Trump weighs options for his war on Iran — including new strikes — despite his initial promises to Americans

that the campaign would last a matter of weeks.

“We have decisions that I’ll make about Iran. Iran’s been decimated. So the only question is — it’ll either be the easy way, or the hard way,” Trump told reporters on Saturday as he left the White House for a rally in Ohio.

A dual British-Iranian national was arrested in central London last week on suspicion of plotting a terror attack, following a security incident at

RAF Fairford in late September.

In total, six people have been taken into custody and then released on bail during the investigation.

British authorities have linked the incident to Tehran. Iran has denied involvement.

RAF Fairford, located 100 miles west of London, has been used by American bombers during decades of conflicts in the Middle East.

US Marine charged in Okinawa death

TOKYO — The Japanese government lodged a rare protest against the United States on Sunday after a US Marine was arrested in relation to the death of a woman on the archipelago of Okinawa.

The Marine, Devin J. Ballard, a 20-year-old lance corporal assigned to the 3rd Marine Expeditionary Force in Okinawa, was being held by authorities in Naha, Okinawa’s capital, US officials said. He is accused of robbing and killing Anna Yagi, 39, who was found at a hotel in Naha on Saturday morning.

The case threatens to revive concerns about the US military presence in Okinawa, Japan’s southernmost prefecture, which is home to about 30,000

active-duty US personnel. Crimes committed by US service members on Okinawa have been a source of tension between the United States and Japan for decades.

The Japanese Foreign Ministry said Sunday that it had summoned the US ambassador to Japan, George Glass, to express its concern. US officials said they were aware of the matter and would cooperate with the investigation.

“We extend our sincere condolences to the victim’s family,” the embassy said in a post on social media.

The 3rd Marine Expeditionary Force confirmed in a statement Sunday that a Marine was in custody.

Deported Laotian man released

CAPE TOWN, South Africa — A Laotian citizen deported by the United States to Eswatini under the Trump administration’s immigration crackdown was released from a maximum security prison in the African nation on Sunday after being held there for more than a year, his lawyer said.

Phone Chomsavanh was among five immigrants deported to Eswatini — where he has no ties — in July 2025 in the early days of the Trump administration’s secretive and highly contentious third-country deportation program.

Chomsavanh’s US-based lawyer, Tin Thanh Nguyen, said in a statement announcing his release that he had only been informed that he was being de-

ported to Eswatini shortly before a military cargo plane carrying him and other deportees landed there more than 14 months ago.

Chomsavanh was now being deported to Laos, Nguyen said.

Chomsavanh and the four other immigrants he was convicted of serious crimes in the United States, but had served their sentences by the time they were sent to the Matsapha Correctional Complex near Eswatini’s administrative capital, Mbabane.

Nguyen said in separate messages to The Associated Press that Chomsavanh had left Eswatini and landed in Johannesburg en route to Laos.

Ethiopia’s Tigray rebels withdraw from Mekelle

KAMPALA, Uganda — Government-allied fighters entered Mekelle, the capital of Ethiopia’s northern Tigray region, a witness said Sunday, after the rebel Tigray People’s Liberation Front announced its withdrawal following renewed fighting.

The TPLF last month seized the Mekelle airport and the city, one of Ethiopia’s largest. In a statement Saturday, it said its forces had pulled out. They had done so in the previous two-

year war, which ended with a peace agreement in 2022, apparently to spare the city from destruction.

Ethiopian Airlines had suspended flights to Mekelle and the Tigrayan cities of Axum and Shire after the rebels seized the airport. The African Union urged restraint, warning that renewed tensions threatened the 2022 agreement.

Prime Minister Abiy Ahmed has tried and failed to subdue

Tigray’s rebellious leaders in recent months, with TPLF Chairman Debretsion Gebremichael openly challenging him. Debretsion said Thursday that the fighting was a “continuation of the previous war” and that his fighters would keep attacking and defending Tigray from its enemies.

Yemen declares war with Houthis, widening crisis

Saudi-backed move marks 2nd try at same fight

By Saeed Al-Batati, Euan Ward, and Vivian Nereim

NEW YORK TIMES

BEIRUT — The Saudi-backed government of Yemen Sunday announced a major military campaign against the Houthi militia, a key Iranian ally, plunging the Middle East deeper into war.

The new operation threatens to open a new front in the US-Israeli war with Iran and further entangle the United States in the widening regional conflict that it began more than seven months ago.

In a televised speech, Rashad al-Alimi, the leader of the internationally recognized Yemeni government — which depends heavily on Saudi Arabia for financial and military support — said that his armed forces were seeking to reclaim the territory lost to the Houthis over the past 12 years.

In a statement hours later, Major General Turki al-Maliki, spokesperson for a Saudi military coalition in Yemen, said that Saudi Arabia had the right to defend itself from Houthi attacks and pledged “full operational support” to the Yemeni military to fight the militia until it is “eliminated.”

Asked about the campaign, Mohammed al-Bukhaiti, a Houthi political official, accused Saudi Arabia of waging war in Yemen to “impose its tutelage and interfere in sovereign decision-making.”

The announcement marks the second time that the Yemeni government has sought to fight the Houthis with Saudi support. In 2015, a Saudi-led interven-

tion devolved into a grinding war that contributed to the deaths of hundreds of thousands of people, and failed to defeat the Houthis.

Last time, the campaign hinged on US support and weaponry, and Saudi officials have sought US assistance this time, too. Last month, President Trump rebuffed Saudi requests.

But the US is providing intelligence, planning, and targeting assistance to Saudi Arabia to help its Yemeni allies, according to one current and one former US official, who spoke on the condition of anonymity to discuss operational matters.

More than 200 US intelligence and military analysts are aiding the Saudi government in command centers inside the kingdom, helping to analyze and select targets, the officials said. The United States is also providing aerial refueling for Saudi warplanes conducting defensive air patrols, they added.

US Central Command, which oversees US military operations in the Middle East, declined to comment.

Al-Bukhaiti, the Houthi official, warned that whenever Saudi Arabia strikes Yemen, the Houthis would strike back by targeting oil facilities.

Asked about Iran’s role in providing support to the Houthis, al-Bukhaiti said that the militia views Yemeni sovereignty as a “fixed principle” and declared that “any hand that reaches out to violate Yemen’s sovereignty will be cut off, whether it is Saudi, Iranian, or otherwise.”

It is still unclear how the new Saudi-Yemeni campaign will differ from the last one. The Houthis have made significant gains on the battlefield in recent weeks and have substantially developed their military capabilities over the past few years.

Heated presidential election is forced into a runoff in Brazil

By Ana Ionova and Adam B. Ellick

NEW YORK TIMES

RIO DE JANEIRO — Brazil’s heated presidential election was forced into a runoff Sunday, according to election officials, with the right-wing challenger leading over the leftist incumbent in a race that may have sweeping consequences far beyond the country.

The challenger, Flávio Bolsonaro, received 47.3 percent of the vote, compared with 44.8 percent for President Luiz Inácio Lula da Silva. With over 95 percent of the ballots counted, neither succeeded in capturing the more than the 50 percent needed for outright victory.

The two candidates will now face each other head-on in an Oct. 25 runoff. But Bolsonaro, son of a former president imprisoned for attempting a coup after losing the last election, appeared to be closing in on his goal.

If Bolsonaro ousts Lula in the runoff, it will mark the biggest win yet for Latin America’s ascendant right. It will also usher in to power an enthusiastic Trump administration ally who has signaled that he is willing to help Washington advance its goal of dominance in the region.

Candidates aligned with President Trump on issues like fighting drug gangs and “woke ideology” have won the last seven elections in the region, with Brazil the biggest remaining prize.

If Lula succeeds in rebounding from Sunday’s setback, it may be seen as a rebuke to the Latin American right. If nothing else, a Lula victory would slow the right’s spectacular march across the continent and complicate Trump’s plans.

As many other Latin American leaders fall into line, Lula has repeatedly defied Trump, warning him not to meddle in his country’s affairs.

For months, expectations loomed large that Trump, who has waded into other regional elections, might try to influence the Brazilian vote. While he did not endorse Bolsonaro, his administration did work to lift him in more subtle ways.

With the runoff just weeks away, Lula and Bolsonaro must now race to capture millions more votes. Key to that will be the roughly 8 percent of voters who backed a range of other candidates Sunday. Those candidates drew only single-digit support.

Analysts expect a majority of those voters, most of whom backed third-party candidates on the right of the political spectrum, to now shift their support to Bolsonaro.

If Lula stands a chance of turning the race around, he will have to persuade some of the millions of voters who stayed home or spoiled their ballots to lend him support. In Brazil, where voting is mandatory for most between the ages of 18 and 70, about 20 percent of voters chose to abstain from casting a ballot Sunday.

The choice before Brazilian voters is a familiar one: Lula pitted against a Bolsonaro.

Lula has framed his candidacy as a vote for democracy and the only way to bar the return of the Bolsonaro family to power, four years after the elder Bolsonaro tried to cling to office after losing the last election.

The younger Bolsonaro has said that, if elected, he will seek amnesty for his father.

People cast their votes during the election in Sarajevo, Bosnia, on Sunday. Around 3.4 million voters were eligible to choose the three members of the country’s multiethnic presidency.

Bosnia votes for 3 presidents

Serb separatist Dodik declares victory for party

By Eldar Emric

ASSOCIATED PRESS

SARAJEVO, Bosnia-Herzegovina — Bosnian Serb nationalist politician Milorad Dodik has declared victory for his party in an election in Bosnia on Sunday that was shaped by economic pressures, the prospect of the Balkan nation joining the European Union, and ethnic tensions that have divided the country since its brutal 1992-95 war.

Dodik is a staunchly pro-Russia politician who, despite not appearing on the ballot, has dominated the campaign and inflamed divisions with separatist rhetoric that have sparked fears of renewed instability in Bosnia.

Formerly the president of the country’s Serb-majority entity of Republika Srpska, Dodik was banned from holding public office after being convicted last year of defying decisions by the international envoy overseeing

the 1995 peace agreement that ended the war.

With nearly 90 percent of votes counted, Dodik’s ally Zeljka Cvijanovic of the right-wing Alliance of Independent Social Democrats had more than 55 percent of votes to take one of the three seats in the country’s tripartite presidency, leading her nearest opponent by around 30 percentage points.

Speaking at a news conference late Sunday, Dodik said his nationalist party would also hold a “vast majority” in Republika Srpska’s assembly, and credited President Trump’s “magnificent victory” in 2024 and Russian President Vladimir Putin’s support for the election win.

“No one should ask us to change our politics,” Dodik said. “We will not give up, but continue for our people ... I cannot believe that we smashed it like this.”

Around 3.4 million voters were eligible to choose the three members of the country’s multiethnic presidency, lawmakers for the national parliament, and heads of institutions for the country’s two entities: the Muslim-majority Federation of Bos-

nia-Herzegovina, and Republika Srpska, which is dominated by ethnic Serbs.

With over 94 percent of votes counted on Sunday, Darijana Filipovic of the nationalist Croatian Democratic Union of Bosnia and Herzegovina held a commanding lead for the Croat seat on the presidency, while incumbent Bosniak member of the presidency Denis Becirovic of the Social Democratic Party led his nearest opponent, Bakir Izetbegovic, by fewer than three percentage points.

Both Filipovic and Becirovic declared victory in their races late Sunday before all votes were counted.

Bosnia’s Central Election Commission said that 1,432,269 votes were cast in total, a turnout of 42 percent that was down by around 8 percent from Bosnia’s last election in 2022.

Bosnia has a complex web of governing institutions that were created by a US-brokered peace agreement in 1995 in an effort to manage the ethnic divisions between Muslim Bosniaks, Orthodox Serbs, and Catholic Croats that gave rise to the war.

Russians grab EVs as Ukraine attacks make fuel scarce

Residents feel pinch as battle effects hit wallet

By Ivan Nechepurenko

NEW YORK TIMES

MOSCOW — Sergei Tselikov, Russia’s leading auto industry expert, has owned more than 20 vehicles, including a Volvo, a Volkswagen, and a Range Rover. All had gasoline engines.

But in July, as Ukrainian drone strikes against oil refineries left drivers across the country waiting for hours at gas stations, he bought a fully electric Chinese hatchback. He had to act quickly — the price of the car, made by Great Wall Motor, went up by about \$2,000 within days as demand surged.

“I tried to fill up one of my cars and drove around to five nearby gas stations, but they had only diesel or lower-grade petrol,” he said, referring to the poorer-quality fuels the government has allowed to be sold to address the shortages. “I was just too lazy to stand in line.”

As Ukraine increasingly takes the war to Russia, the effects may be most visible on the roads. Since the end of June, Russia’s electric-vehicle market has more than doubled. Most of the EVs sold in the country are Chinese, a testament to Moscow’s economic pivot in response to Western wartime sanctions.

Russia is playing catch-up. While other nations built out EV supply chains and charging infrastructure, Russia looked the other way. Its position as one of the world’s top oil producers used to keep gasoline cheap. Vast distances between major cities meant charging networks were economically unviable without guaranteed demand.

Now, EVs are suddenly a

more common sight on Russian roads, particularly in major cities. The number of electric vehicles, including hybrids, sold in the country went from 43,000 in the January-to-August period of 2025 to more than 83,000 over the same period this year, according to the Russian Ministry of Industry and Trade.

By the end of September, the share of pure electric vehicles and plug-in hybrids that can run without gas had reached 11.5 percent of the Russian car market, up from about 5 percent at the beginning of the year, according to Avtostat, an auto research agency led by Tselikov. The EV market share in Russia is slightly higher than in the United States, but it is only a small fraction of the share in China, which is 45 percent.

While the EV surge in Russia stems from a specific factor — Ukrainian attacks — the shift there is the latest example of how war and supply shocks can transform car-buying decisions.

EV sales have boomed in other parts of the world because of the US-Israeli war in Iran, which has caused oil and gasoline prices to soar. Globally, EVs are on track to account for a record 29 percent of all new car purchases this year, according to the International Energy Agency.

EV sales have risen in more than 90 countries this year, including Brazil, Australia, India, and South Korea.

In Russia, the fuel shortages are unnerving many Russians who had grown accustomed to the war in Ukraine being only a distant nuisance. They threaten to become a serious political issue for the government.

To try to quell the crisis, the government permitted the sale of lower-grade gasoline and diesel. But some cars began to break down after using the lower-quality fuel.

Germany’s Merz offers \$1.5b in aid

By Susie Blann

ASSOCIATED PRESS

KYIV — German Chancellor Friedrich Merz announced a new aid package for Ukraine worth more than \$1.5 billion during a visit to Kyiv on Sunday, as Russia escalated its attacks on Ukrainian cities.

The aerial war has intensified, with Moscow menacing cities across Ukraine with hard-to-intercept ballistic missiles and jet-powered drones, while Kyiv has been striking Russia’s oil industry and businesses.

About \$1.1 billion of the package is military aid, Merz said at a news conference. Germany is also providing some \$395 million in energy aid ahead of winter for generators, substations, and repair work, he said.

Ukrainian President Volodymyr Zelensky said the two countries also signed 15 agreements worth about \$9.6 billion, mostly covering security cooperation, weapons production, and procurement, as well as a deal to expand their joint counter-drone efforts. Zelensky said Merz’s visit amid Russian attacks was “an important signal of support for Ukraine and of the courage of Germany and all of Europe.”

SJC to hear cases on ICE arrests of defendants

►COURT CASES

Continued from Page A1

man who was detained while there was an open criminal case against him in Massachusetts.

The cases before the SJC also raise questions of justice for victims, even those affected by less-serious crimes.

“The answer cannot be that most District Court cases brought against defendants vulnerable to deportation will become functionally unprosecutable,” Bristol Assistant District Attorney Shoshana Stern wrote in a filing to the high court.

The SJC hearings scheduled for Monday morning come two weeks after an immigration sweep that played out in public on the South Coast, a reminder that the deportation machine President Trump crafted in the first months of his second term continues to churn. ICE arrests across the country reached record highs this summer.

In Massachusetts, state prosecutors began considering the likelihood of an increase of immigrant criminal defendants being deported since before Trump’s second term. And then, over the first few months of last year, the reality bore out. The Massachusetts Trial Courts system reported 614 immigration arrests at or near courthouses in 2025, more than double the 282 in 2024. Many were criminal defendants.

Earlier this year, the state

passed a law banning ICE agents from making civil immigration arrests at state courthouses. The law doesn’t bar agents from detaining a defendant elsewhere.

The state doesn’t count how many cases remain open after such an arrest, or have been dismissed following one.

It’s an “increasingly common injustice” that people end up in this legal purgatory, with open criminal cases they can’t answer for because of an immigration arrest, said Rangaviz, who’s preparing to argue one of the cases before the SJC.

The cases that have reached the SJC underscore the divergent manner by which judges have handled the same issue.

In one case, a district court judge wouldn’t issue a writ of habeas corpus to immigration officials — essentially an order that the federal government produce a defendant in court — because the judge believed he did not have the authority after it became clear that ICE was holding the defendant, Freslet Noralus, outside of Massachusetts at a detention facility in Kentucky.

In another case, a different judge did issue writs for accused drug dealer Jaime Loredó to appear virtually. ICE ignored at least one, but honored multiple others — then deported Loredó before trial.

The SJC’s ruling could offer guidance about the circum-

LANE TURNER/GLOBE STAFF

The John Adams Courthouse serves as home to the Massachusetts Supreme Judicial Court.

stances under which lower-court judges can order these so-called writs of habeas corpus. The men’s lawyers, the prosecutors, and the state attorney general’s office all support judges having the power to do so, but are asking the SJC to weigh in.

The cases hand the SJC a related issue to decide: Since ICE is a federal agency, these writs from state courts are glorified requests. Sometimes ICE follows them, and sometimes not.

So attorneys for the now-deported men argue that it’s a prosecutor’s duty not only to ask federal judges to issue habeas writs, too, since federal judges have clear authority over ICE. They’re asking the high court to determine whether they’re required to do that, and how, currently, it can only come through

the attorney general’s office, and it’s not clear when the AG would agree to make such a request.

The more controversial questions before the SJC with these cases involve what to do if a criminal defendant can’t show up in court because they’re in ICE custody.

In the cases of both Noralus and Loredó, the judge ordered a warrant for the defendants’ arrest and rejected motions to dismiss their cases. .

The warrant, issued when someone doesn’t appear in court, ends up being punitive, Rangaviz argued, and it shouldn’t be issued against someone who, like his client, simply can’t show up for reasons outside of their control.

He said it creates a Catch-22: Because there’s an open war-

rant, ICE is unlikely to let the person out on bond. If the person isn’t let out on bond, they can’t come to court and have the warrant removed.

That leaves his client and others like him “stranded between a criminal case he cannot resolve and an immigration proceeding that will use that unresolved case against him forever,” Rangaviz wrote. (The Supreme Court announced this past week that it would hear a challenge to the administration’s practice of denying immigration bond hearings.)

In Noralus’s case, the judge said the warrant was simply meant as an administrative tool to hold the case open. Prosecutors suggest that the high court or Legislature could create another category that does the same and doesn’t require an active warrant.

Then there’s the matter of whether judges should be required to dismiss cases when the defendant has been arrested by ICE. Rangaviz said that’s the only possible solution when prosecutors can’t bring these defendants to court.

In the third case before the SJC, the defendant, Wilson Martell-Lebron, a Dominican national, was arrested in the middle of his trial in March 2025 by ICE agents, including one who was scheduled to be a witness against him. The arrest led to a public feud between Suffolk District Attorney Kevin Hayden

and US Attorney Leah Foley. Hayden criticized the arrest; Foley threatened to prosecute anyone who impeded ICE.

Martell-Lebron had been on trial on a charge of providing false identification on a license application. The Boston Municipal Court judge overseeing the trial, Mark H. Summerville, was furious. He ordered public hearings and ultimately dismissed the case, faulting the “prosecution team” — in this case, State Police officers and ICE agent testifying for the prosecution — for obstructing justice by working to deport Martell-Lebron.

The Suffolk DA’s office, in its filings to the SJC, argued Summerville violated rules of conduct and misrepresented the series of events. The DA’s office also argued he should have issued a writ of habeas corpus for Martell-Lebron’s return rather than dismissing the case.

Martell-Lebron’s appellate attorney, Cara M. Cheyette, contends that the prosecution team committed misconduct and was appropriately sanctioned.

As with the other two cases, the SJC is considering whether dismissal is appropriate. With this case, the justices will also weigh whether prosecutors have an ethical obligation to inform the court of an impending ICE action against a defendant.

NASA VIA NEW YORK TIMES

Ambitious plans by NASA could have nuclear power on the moon by 2030, beating a joint venture by Russia and China.

Superpowers want nuclear power on the moon

In new space race, US vying to beat Russia, China

By Selam Gebrekidan

NEW YORK TIMES

HONG KONG — In late August, NASA asked contractors to prepare to build a nuclear reactor that could survive a space voyage and run without maintenance near the moon’s south pole. That may sound like science fiction, but the agency wants it ready to be launched by December 2030.

There is a reason for the rush. Russia aims to have a lunar reactor running by 2036 as part of a secretive partnership with China. NASA has already sped up its schedule to beat its rivals.

The race is for the very future of space exploration. The United States and China want to be first to establish a moon base, to search for resources including frozen water and to launch missions deeper into the solar system. Controlling access to the moon’s assets is vital to this mission. Both superpowers believe a nuclear reactor is the centerpiece of this ambition.

The countries plan to turn on their reactors only after they reach the moon. But some leading scientists caution that governments are moving too quickly in an era of space exploration that has seen some notable disasters. In the last six years, multiple Chinese, American, and Russian rockets have failed and exploded, and a Russian lander

has crashed into the moon. Space junk regularly tumbles to Earth.

Failures could cause a chain reaction with dire consequences. Falling reactor debris could scatter radioactive material, as happened in Canada in the late 1970s. An explosion or a meltdown on the moon’s surface would risk turning entire regions into no-go zones.

“There will always be a space race going on, and if you enter nuclear power into that mix, then it could take a potentially more dangerous turn,” said Edwin Lyman, the director of nuclear power safety at the Union of Concerned Scientists.

A review of technical specifications, procurement documents, and academic research, along with interviews with industry insiders, government officials, and critics, offers the clearest picture to date of how China, Russia, and the United States are pursuing this nuclear ambition.

The records also help explain a key aspect of the Chinese-Russian space partnership, an alliance championed by Presidents Xi Jinping and Vladimir Putin.

Nuclear power appears to be the only core task that China has delegated to its partner in the lunar project. No country has more experience than Russia in this area. It launched more than 30 reactors into orbit, mostly in the 1970s and 1980s, aboard Cold War-era satellites, and it is a leader in civilian nuclear power. Russia controls the largest supply of what is considered the

safest nuclear fuel for space missions. That fuel, uranium that is not highly enriched, is in short supply in the United States.

“Russia has practically no competitors in the field of space nuclear energy,” Mikhail Kovalchuk, the president of Kurchatov Institute, told the Russian news agency TASS. Kurchatov, a research agency, is helping design a lunar reactor.

NASA is playing catch-up. The agency launched a reactor in 1965 but shut it down after an unrelated spacecraft failure. The United States has spent more than \$20 billion on space nuclear programs since then but has never deployed another reactor.

The race for a lunar reactor is as much a spectacle of power as it is a matter of exploration. President Trump has declared superiority in space to be part of his “America First” agenda. Xi and Putin have made similar declarations.

Any permanent base on the moon requires reliable power. Nuclear reactors do not need sunlight to work, and they can be compact. With the right design, they require little human intervention, according to NASA and the Kurchatov Institute.

For the first few years, the United States and China would need only enough power to keep equipment warm and to charge rovers, vehicles that roam the surface. For that, they plan to use solar power and radioisotope power systems.

These systems convert heat from the natural radioactive decay of isotopes into electricity.

The United States, Russia, and China have used the systems in space already.

But an expanded lunar base would need a lot more power. Any power system near the moon’s south pole would have to survive temperature swings between 130 and -334 degrees Fahrenheit.

Moscow has tasked its state-owned agencies with delivering a lunar reactor, called Selena, by 2036 to power the lunar stations led by China. Selena would generate up to 10 kilowatts of electricity and be able to operate autonomously for a decade. It would share features with an earlier reactor that was designed to operate in the Arctic.

NASA has accelerated its timeline, fearing that a Russian-Chinese reactor could establish a de facto exclusion zone on the moon. NASA’s Lunar Reactor 1 is expected to produce 20 kilowatts of electricity and work for five years with no intervention.

As a first step, NASA plans to use nuclear power to propel a spacecraft to Mars in December 2028. This has never been done.

In parallel, the Pentagon intends to develop its own space reactors for deployment in orbit and on the moon, according to the White House.

Target dates have repeatedly slipped, and few experts expect the countries to meet their deadlines. Nobody has a proven lander that can lower heavy, potentially radioactive material onto bumpy lunar terrain. Nobody has ever installed a reactor in low gravity.

UAE shared details about FlyDubai flight with Israel

Pilots’ names and nationalities were included

By Melanie Lidman and Samy Magdy

ASSOCIATED PRESS

TEL AVIV — Authorities in the United Arab Emirates shared with Israel a list of passengers and crew ahead of the FlyDubai flight on which a pilot attempted to seize control of the Israel-bound aircraft and crash it, regional officials said Sunday, raising more questions over how the attacker evaded detection.

With the investigation underway, preliminary details about the incident have highlighted several major security lapses. Officials already have said the Omani copilot had been barred from flying by his own country because of concerns about his extremist views.

It also remains unclear how a citizen of Oman, an Arab country that has no diplomatic relations with Israel, was allowed to fly a plane-load of Israelis to Tel Aviv.

The UAE, which is leading the investigation, said the copilot attacked the flight’s captain with the cockpit’s crash ax and tried to take control of the plummeting plane in a “terrorist attack” Wednesday. His actions nearly crashed the flight with 182 people on board before the Indian captain managed to open the cockpit door, allowing passengers and others to rush in and subdue the attacker.

The regional officials said Emirati authorities had shared information about the passengers and crew, including their nationalities. Israel hadn’t raised red flags on any passenger or member of the crew, said the officials, who spoke on condition of anonymity because they were not authorized to speak to reporters about the probe.

The Shin Bet, Israel’s domestic security agency, said the Transportation Ministry is responsible for vetting passenger lists from foreign flights. Transportation Minister Miri Regev told Israel’s public broadcaster Kan, that the security agencies are responsible for flight security and that her ministry wasn’t given a list of passengers or any warnings.

Sharing the list is standard aviation procedure. But the

head of aviation security at the Transportation Ministry, Dvir Rubenstein, told Army Radio that the ministry relies on local security checks and does not have the tools or the ability to run checks on each passenger on every flight.

Prime Minister Benjamin Netanyahu said Thursday that Israel has long-standing agreements with foreign carriers to keep pilots from flying into the country if they are citizens of nations that don’t maintain diplomatic relations with Israel.

Australian police said Sunday that counterterrorism investigators were looking into the attacker’s possible connections to Australia.

The passengers who halted the attack and helped regain control of the aircraft have been hailed as heroes in Israel.

But as the initial euphoria of the rescue has subsided, officials have begun to raise difficult questions and trade accusations about the security blunders that could have led to a major disaster.

Ahead of the elections at the end of the month, some opposition candidates have seized on the security failures to highlight what they perceive as negligence on the part of Netanyahu and his supporters.

Transportation Minister Regev is a member of Netanyahu’s Likud party and a staunch supporter.

“This is exactly what system collapse looks like,” Yair Golan, head of the opposition Democrats party, wrote on X. “A transportation minister who completely abandons our skies, and a prime minister who abandons national security.”

It also remains unclear how FlyDubai, a low-cost Emirati airline that operates flights between Israel and the UAE, had failed to identify the Omani pilot as a security risk.

Philip Baum, a visiting professor of aviation security at Coventry University in England who wrote a book about aircraft hijackings and bombings, said background check systems differ from country to country and there are limits on what types of information can be shared.

“In terms of aviation security itself, obviously we want to have as robust background checks as possible. But there are huge limitations on doing background checks in any case, especially in cross-border checks,” he said.

Lawmakers demand details on nursing home rules

►NURSING HOMES
Continued from Page A1

other out-of-state nursing home companies, mostly from New York and New Jersey, with questionable records.

Jehlen is requesting a meeting with Dr. Robbie Goldstein, commissioner of the Department of Public Health, about his agency’s nursing home oversight. Representative Marjorie Decker, a Cambridge Democrat who chairs the Joint Committee on Public Health, said she is sending the commissioner a letter with a long list of questions about why it hasn’t used legal tools it had to more deeply vet these nursing home operators.

In an interview Wednesday, Governor Maura Healey stood by her health commissioner.

“I have total confidence in Commissioner Goldstein in this moment, in particular, where health care is being ripped away from millions of Americans,” she said, after an event at MIT. “We are so fortunate to have Robbie Goldstein here in Massachusetts to protect people. And I have great confidence in the team.”

She also said that she cares deeply about the plight of the state’s nursing home residents.

“It’s really important to me that everyone who has a loved one in a nursing home or is thinking about putting a loved one in a nursing home has the comfort, has the assurance that their loved one is going to be well cared for,” Healey said.

Within hours of the Globe report, the Healey administration addressed one factor that was the focus of much of the legislators’ anger — the failure of the administration to implement a 2024 law that expanded

the vetting powers of the state.

That law gave broader authorities for the Department of Public Health to investigate the out-of-state records of nursing home operators — covering everything from poor performance to finances — before granting them licenses. Many of the out-of-state operators buying up homes in Massachusetts have troubling records in other states.

Mirlis, for example, owned nursing homes in Connecticut with dismal quality ratings before he began buying homes in Massachusetts.

Healey’s staff announced that the administration would finally take action on that law, passed two years ago, by adopting regulations that would allow DPH to put the law in effect. The state’s Public Health Council is scheduled to vote Oct. 14 on these long-awaited regulations.

DPH commissioner Goldstein had acknowledged to the Globe that he had been aware of the poor performance of Mirlis’s RegalCare chain even as it continued to acquire more homes. But he said his powers to take action against Mirlis and other questionable operators were limited because state law didn’t give regulators express permission to look at applicants’ broader national records.

The Globe found little evidence of meaningful vetting of nursing home operators in the past few years, including their performance within Massachusetts. The care at RegalCare homes in this state began to deteriorate almost immediately after Mirlis bought the homes in the wake of the pandemic. And yet state regulators have

SUZANNE KREITER/GLOBE STAFF

A stone topper was missing from an entrance pillar at RegalCare in Taunton. The nursing home is one of several purchased by Eli Mirlis of New Jersey in the past several years.

continued to allow him to buy more facilities here — three in the last six months alone in Sudbury, Whitinsville, and Wakefield.

The Globe’s review of the existing laws found that DPH was never prohibited from looking at a company’s out-of-state record in reviewing applicants, even if the new law spells out wider authority.

The state’s health department has not denied an application to buy a nursing home in at least seven years.

Republican gubernatorial nominee Mike Minogue, the former chief executive of Danvers-based biomedical device company, Abiomed, weighed in on the Globe report, calling it

more evidence of Healey’s “failed leadership.”

“When laws are passed to give state agencies more resources to protect vulnerable people, they should be used, not ignored,” Minogue said in a statement.

In an interview, he said that if elected he would push for outside auditors to ensure the health department and other agencies are more accountable and that bad nursing home operators are weeded out.

“We can get rid of the people that are the bad actors, that are costing us more money, wasting our tax dollars, and most important, not giving great care to our vulnerable older people,” Minogue said.

Representative Thomas Stanley, a Waltham Democrat who co-sponsored the 2024 law granting the health department expanded oversight, said he has been deeply frustrated at the department’s slow implementation of that legislation.

“We are providing DPH and the regulators all sorts of tools to take care of these problems that are identified, yet we still have a sense of a lack of urgency in implementing them,” he said.

Senator Julian Cyr, a Provincetown Democrat who co-sponsored the law and previously worked at DPH for six years, said the findings reflected an alarming pattern.

“We have predatory providers who are fleecing the public

purse and providing unacceptable care to the residents living in their facilities,” Cyr said.

Mirlis did not respond to most of the Globe’s questions, including evidence that he fabricated educational credentials. He also did not answer questions about his finances, though he explicitly denied he has private equity funding. He broadly defended his chain’s performance, saying RegalCare strives for the highest level of care and works with DPH to correct any problems that arise.

Representative Decker said the state should examine nursing home buyers’ records and financial practices, including whether or not they have private-equity backing. All nine chains identified by the Globe reported on federal disclosures that they had no such backing.

“The banning of private equity alone is not going to solve the issue itself,” Decker said. “If it’s not private equity, are we clearly looking at these owners who are using these acquisitions to extract more money?”

Jen Benson, the state director of AARP Massachusetts, called the Globe’s findings “deeply concerning” and urged stronger enforcement.

“The state must provide strong oversight, enforce protections for residents and hold facilities accountable when health and safety standards are not met,” she said. “Older Massachusetts residents deserve quality care and to be treated with dignity.”

Higher mortgage rates intensify Massachusetts’ housing crisis

►MORTGAGES
Continued from Page A1

houses for the place — a cozy, 2,500-square-foot Colonial a mile from Union Station — did not draw a single prospective buyer, even after the family cut the price to under \$450,000.

So in a state with so much pent-up demand for housing, taking on a mortgage has become so expensive that many moderate-income buyers have all but given up.

“It’s left me wondering: Is there something wrong with our house?” Fontecchio, 38, said. “We’ve tried to do everything the right way. Not even our agent seems to understand why it won’t sell.”

The market for home sales has been effectively frozen since early 2022, when mortgage rates began to soar after nearly a decade of decline. Rates more than doubled in a nine-month span in 2022 and have, for the most part, remained at those high levels, sidelining both would-be buyers and sellers daunted by the prospect of higher monthly payments on top of the region’s sky-high home prices.

There was a brief period of optimism earlier this year when the average for a 30-year fixed-rate loan slid below 6 percent for the first time in four years. Some sellers, including Fontecchio and her husband, dipped their toes back into the market.

But any modest progress has been swiftly erased in recent months.

This past week, the average on a 30-year fixed-rate mortgage was 7.28 percent, according to Freddie Mac, after months of steep increases. A combination of worrisome issues, including persistent inflation, volatile fuel prices from the war in Iran, and surging US debt levels, has prompted investors in the bond market to demand higher yields, and that’s flowed through to mortgage loans.

It’s a blow to housing affordability, as the higher rates mean higher monthly housing payments for new buyers. For families that had hoped they might have the means to afford a new place, the math has shifted dramatically.

“What you are effectively seeing when rates rise by that much, that quickly, is thousands of buyers being priced out of the marketplace,” said Theresa Hatton, president of

PHOTOS BY MELECK ELDAHSHOURY FOR THE BOSTON GLOBE

Caitlin Fontecchio and her husband, Anthony Pellechio, hope to sell their Worcester home to buy a bigger property.

the Massachusetts Association of Realtors. “You have a lot of people who maybe could’ve bought six months ago at 6 percent who are now realizing they’d have to pay \$1,000 more a month on the same house.”

All that leaves people like Fontecchio and her husband, Anthony Pellechio, in limbo.

The couple — who together earn about \$150,000 a year — see the problem from both sides as buyers and sellers. They bought their current home for \$365,000 in 2020 and have fixed it up, with new windows, appliances, and solar panels.

But with two kids and a third on the way, they want a bigger yard, and Fontecchio longs for the quiet outside of the city.

They have a house in Warren under agreement — four bedrooms with a big yard that’s supposed to be complete in November, around the time Fontecchio is due to give birth.

But with interest rates rising, the couple slashed the asking price on their Worcester home to attract buyers. Any further concessions may mean

they won’t have enough for the new house, which they’ve agreed to buy for just over \$500,000.

The prevailing feeling, said Fontecchio, is disillusionment with the economy. She and her husband entered the job market during the Great Recession and have struggled with student loan debt. Now they’re trying to navigate a turbulent housing market that makes it difficult to take advantage of the equity they’ve built in their

current home.

“It would be very disappointing to have come this far and lose out on our next home because of fuel prices and geopolitical instability,” she said.

Housing costs have long been high in Massachusetts, but grew especially fast over the last decade, driven by population growth, a surge in demand during the COVID-19 pandemic, and decades of underbuilding that made for a huge shortage of homes. Since 2016, home

values in the region have grown by over 50 percent, according to one national index.

But homeownership was still relatively accessible during that stretch, at least for some middle-income families, because mortgage rates were historically low. During an 18-month period in 2020 and 2021, a 30-year fixed-rate loan averaged around 3 percent, according to Freddie Mac, the lowest point since the company began tracking rates in 1971. If you could afford a down payment, monthly mortgage costs were often lower than rents.

But higher mortgage rates have erased any semblance of affordability.

In August 2021, the typical monthly mortgage payment on a median-priced home of \$780,000 in Greater Boston was about \$2,554, according to Bankrate’s mortgage calculator. In February of this year, when the median-priced house in the region sold for around \$852,500, that monthly payment was more like \$4,137. And in September, after interest rates began to soar again, it jumped to \$5,168.

There’s a mental hurdle that comes with the rise in rates too, said Paul Willen, a senior economist with the Federal Reserve Bank of Boston. For buyers who can afford it, “there’s no logical reason why 7 is any different from 6 percent,” he said. “But there may be some sort of psychological difference at 7 that’s just too much.”

For sellers, the higher rates feel like a cruel turn: Many have much lower rates on their current home, so giving that up for such a significant step up is broadly unappealing, Willen said.

“For a lot of people, if they want to move, they’re looking at, ‘Well, how much can I afford?’” Willen said. “And the answer is: something much smaller than the house they’re in.”

Some sellers are taking a chance and putting their properties on the market anyway, said Mary Gillach, principal of the Gillach Group at William Raveis in Brookline. But it’s harder to predict if they will sell because so many buyers, especially middle-income families looking for a first home, simply cannot afford them.

Homes that do sell quickly, Gillach said, are in a rare atmosphere: above \$3 million or \$4 million, as their likely buyers have the means.

Gillach listed a home in Brookline recently for \$5 million that went under agreement within 24 hours, she said. But she can’t find a buyer anywhere for a home on Pond Street in Jamaica Plain priced at \$1.7 million.

Of course, there is more at play in the state’s housing market slowdown than just interest rates. The general state of the economy and the rising cost of everyday goods and services are weighing heavily on those who may otherwise be ready to purchase their first place.

It is a vexing problem, said Melvin Vierra Jr., an agent at Re/Max Real Estate Center in Boston, because there is little anyone in Massachusetts can do about the global instability bringing down the housing market.

“Uncertainty can be a powerful force when it comes to the housing market,” he said. “And right now, we have plenty of it.”

Worcester’s bet on biotech is paying off

Brick by brick: How the Commonwealth’s Gateway Cities can build better futures

Third of a seven-part series from *Globe Opinion*.

WORCESTER

On a Thursday in March, Jon Weaver, president and CEO of Massachusetts Biomedical Initiatives, had what he calls “success problems.” He was trying to talk to a visitor over construction noise to figure out how many desks he could squeeze into future new office space. The building is one of three sites owned by the nonprofit incubator for life sciences companies in Worcester. The building opened in 2020 with 25,000 square feet of office and lab space for companies starting and scaling up. By 2023, it had opened 15,000 square feet of manufacturing space. Now, the building was nearly full, with 44 companies and more about to move in.

“We can’t grow fast enough to keep up with demand out here,” Weaver said. Such strong economic growth in the Gateway Cities should be music to state lawmakers’ ears. For decades, policy makers have fretted that the state’s economy was too Boston-centric and too focused on the “eds and meds,” leaving it exposed in the event of a downturn. The real perils of that overreliance are now becoming clear as the Trump administration slashes research and education funding, putting thousands of jobs in Eastern Massachusetts at risk, while demographic changes mean there will be fewer students at the city’s colleges and universities.

A century ago, the state had what at the time seemed like a diversified economy. Some cities specialized in manufacturing textiles, some focused on shoes, some on toys or firearms. When the Gateway Cities of today carve out their economic niches, they’re not just rebuilding their own local economies — they’re making the whole state more diverse and economically resilient.

Biotech, to be sure, faces headwinds of its own. Still, even amid a glut of empty lab space around Boston, Worcester’s biomedical scene is booming. Weaver said the biggest problem for successful companies is finding places to move when they leave the incubator. Only around 8 percent of companies started at MBI have stayed in Worcester, which Weaver attributes mainly to a dearth of lab buildings. The next goal he and other city leaders have is attracting funding and private developers to build more lab space.

“For a long time, Worcester was trying to sell potential. Now, we have to figure out ways to scale and grow the market that’s here,” Weaver said.

As many Gateway Cities struggle to develop their economies, Worcester offers a model for how a city can pivot from one industry to another to rediscover lost economic vitality. That requires collaboration between city leaders and institutions, with a focus on becoming a global hub for one industry.

Worcester was, historically, a bustling industrial city. In the 1800s and early 1900s, Worcester-made machinery powered the textile industry, and companies manufactured wires and steel. Worcester was home to traditional tool and die manufacturing and early automotive companies. But in the mid- to late 1900s, amid globalization, companies closed their Worcester factories, shifting manufacturing south or overseas. Residents moved to the suburbs.

SHIRA SCHOENBERG/GLOBE STAFF

Jon Weaver, president and CEO of Massachusetts Biomedical Initiatives in Worcester, posed in front of a mural at the life sciences incubator on March 12.

Worcester’s population peaked at over 200,000 in 1950 before steadily declining to 162,000 in 1980.

Yet over the next four decades, Worcester experienced a renaissance. By 2020, the city’s population again exceeded 200,000, and Worcester today has its largest population in history.

That renaissance was powered not by traditional manufacturing but by biotech. Worcester Polytechnic Institute and UMass Chan Medical School, along with the city’s multiple other colleges, pump out skilled workers, creating a talent pipeline that attracts pharmaceutical, medical device, and life science companies, from small startups to multinational industry. The number of residents with a bachelor’s degree or higher increased by 22.5 percent over the past decade, with a particular increase in higher-income residents, according to the city’s 2024 housing needs assessment.

Not every Gateway City has the educational institutions Worcester has. But each community has assets that could turn it into a commercial hub. New Bedford has its port, where the University of Massachusetts Dartmouth recently received a state grant to work with private companies on developing a hub for testing and commercializing marine technologies. The University of Massachusetts Lowell is working with city officials to develop the Lowell Innovation Network Corridor, attracting defense and engineering companies. A Pittsfield incubator recently received a state grant to develop an advanced optics manufacturing cluster.

Worcester provides a model for how these efforts can advance.

The seed to Worcester’s success was planted in 1965, when the UMass Board of Trustees shocked the Boston establishment by voting to locate the university’s new medical school in Worcester.

Worcester capitalized on that win with decades of investment and collaboration between state government, local government, businesses, and nonprofits.

In the 1980s, the Worcester Business Development Corporation acquired part of the former Worcester State Hospital to build what would become the Massachusetts Biotechnology Research Park. In 1984, the Worcester Regional Chamber of Commerce created what would become MBI. In 1985, Governor Michael Dukakis designated Worcester a “center of excellence” in biotechnology, with the goal of using public investment to help create a cluster of biotech businesses around UMass.

In 1989, the 1-million-square-foot research park attracted the German pharmaceutical company that would become AbbVie, the drugmaker that developed Humira and remains a major Worcester employer.

More recently, in 2015, MBI proposed creating a new biomanufacturing park next to AbbVie. The Worcester Business Development Corporation acquired 46 acres of state-owned land, a site now called the Reactory. Chinese company WuXi Biologics is in the process of building a \$300 million, nearly 190,000-square-foot biomanufacturing facility there.

“We’re seeing a transformation from a heavy-industrial type base to a more service economy, and the life sciences helped us diversify a lot more,” said Craig Blais, president of the Worcester Business Development Corporation.

The life sciences ecosystem attracts entrepreneurs like Hannah Sheehan Sauve and Jeff Sauve, cofounders of SauveBio, a company that sells flow cytometry services, a technique to measure cell characteristics that can help pharmaceutical companies identify new drug targets and assess a drug’s efficacy. The couple, who are married and in their 30s, were both working near Boston — she in pharmaceuticals, he in sales — when they decided to start their own company. They left Boston and moved to Connecticut to be closer to family and to nature, deciding to open their company in Worcester because of MBI.

The incubator — which charges

around \$2,500 a month for the smallest startup lab space — offers mentoring, shared equipment, connections to investors, and a community of scientists. The Sauves have gotten referrals for lawyers, advice on financing, and mentoring from experts who themselves started cytometry businesses. Sheehan Sauve said Worcester feels like a “thriving community” with restaurants, concerts, and comedy shows, with less stress than Boston.

It’s a vibe Worcester officials have worked to cultivate, marketing Worcester as its own hub, but one accessible to Boston. Timothy Murray, president and CEO of the Worcester Chamber of Commerce, said Bostonians no longer see Worcester as a “far-away place” but as “a complementary hub.”

In 2021, Worcester upped its sports scene by attracting the WooSox, the Red Sox’s Triple-A affiliate, from Rhode Island. Worcester’s Union Station was renovated and reopened in 2000 with a handful of commuter trains running between Worcester and Boston. Now, there are more than 20 round-trips daily, though the trip from Worcester to South Station still takes around one hour and 45 minutes, making a daily commute challenging.

To be sure, Worcester still has the challenges that plague other Gateway Cities — including a lagging median income and difficulty building housing. Between 2020 and 2025, Worcester gained around 1,900 units, representing a 2.3 percent growth in its housing stock, according to The Boston Foundation. But the city’s housing production plan estimates that by 2033, Worcester will need around another 11,600 rental units and 850 owner-occupied units to meet growing demand.

Worcester is also competing for businesses with surrounding communities like Devens, Westborough, and Framingham.

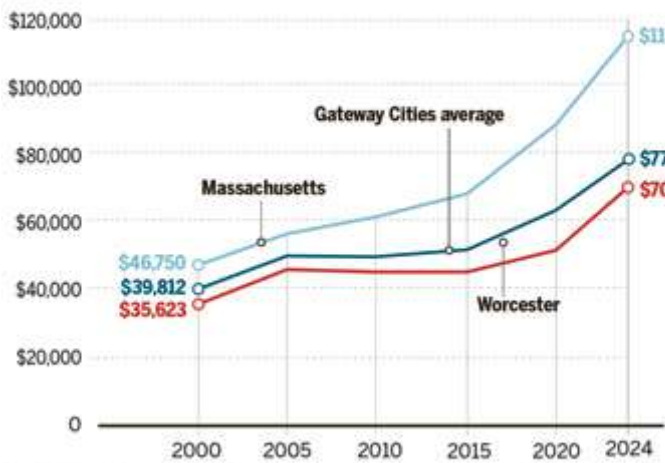

And because rents are lower than in Boston and Cambridge but construction costs are high, developers struggle to make projects pencil out. Worcester chief development officer Peter Dunn said it’s taken a mix of public-private partnerships and subsidies to make new housing and commercial projects viable, as it has in many Gateway Cities. That’s also why Weaver said it’s been hard to attract developers to build more lab space, even though the demand is there. Weaver anticipates that eventually, rents will rise enough to make new projects feasible.

It is well worth the investment for the state to help make those developments viable.

Most Gateway Cities are communities that used to anchor their regional economies but fell into disrepair as industries changed. If more of them can regain that status, hosting clusters of the industries of today, it won’t just be those cities that will prosper. The whole state will be better prepared for the future.

Median income in Worcester

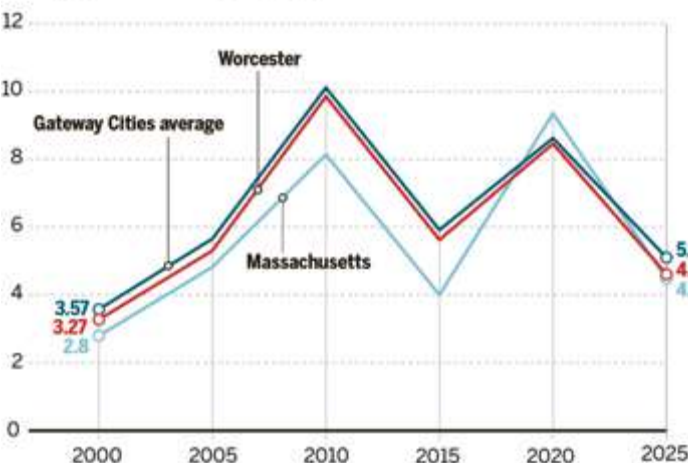

Workers in Worcester earn, on average, less than workers in other Gateway Cities and workers statewide.

INBOX

ICE purchase of robot dogs is more than a little chilling

Companies and citizens should be wary of how the devices will be used

Re “ICE snapping up four robot dogs for \$1.3m: Boston Dynamics says that if misused, deal void” (Page A1, Sept. 30): I read with concern Boston Dynamics’s response to questions about the Connecticut company Radeco’s sale of modified robotic dogs to ICE.

US Immigration and Customs Enforcement indicates that the worst of the worst — cartels, gangs, and human smuggling and trafficking networks, according to Yogev Toby’s story — would be targeted. But too many innocent people have been swept up; in fact, most detained immigrants have no criminal records.

The American Prospect’s tracker reports that ICE and Customs and Border Protection officers have been directly involved in at least 32 deaths and 47 injuries. In addition, 63 people have died in custody. All since Inauguration Day. There has been virtually no accountability for these casualties.

A spokesperson for Boston Dynamics said that “any suggestion that these robots will be used to support immigrant detentions or deportations is false,” that the language in the contract is “boilerplate,” and that the robots will be used for good reasons and for the safety of ICE personnel.

Taking ICE at its word is credulous. Know your buyer. “Boilerplate” contract language is not sufficient when the buyer has such a deadly record. Boston Dynamics should be as concerned about the safety of individuals ICE encounters as it is with the safety of ICE personnel. Clearly, ICE isn’t concerned about the safety of the people its agents encounter.

KEVIN F. MAWE
Executive director
Rian Immigrant Center
Boston

Original design served a purpose. New contract raises questions.

Before Boston treats Yogev Toby’s story on ICE’s \$1.3 million purchase of modified robotic dogs as a sci-fi morality play, remember that the first of these robots ever shot on duty was not in a desert tunnel. It was in a Hyannis basement.

In March 2024 Massachusetts State Police sent “Roscoe” into a Barnstable standoff. An armed man knocked the machine down, then shot it three times. No officer took those rounds. This is the case for use that Boston Dynamics sells: Send metal first.

However, the new contract with Radeco, which, according to the article, modifies the robots with military grade additions, is not that simple. ICE’s paperwork talks about tunnels and cartels. It also talks about closets, bunk beds, and detention.

Boston Dynamics calls the wider language “boilerplate” and says the robots will not support deportations.

A terms-of-sale clause is not a statute.

Massachusetts recently gave Boston Dynamics \$25 million in tax credits. If the state wants to know what it subsidized, it should require a public log of every ICE robot deployment.

RONALD BEATY
West Barnstable

See spot detain

I read that ICE is buying four robot dogs, originally nicknamed “Spot,” for more than a million dollars of our tax money. I wonder what US citizens Dick, Jane, and Sally will say as their mother or father is led away to ICE jail by the formerly beloved Spot?

BILL HAHN
Stoughton

Hell on earth

President Trump frequently signals his real intent in advance.

True to their namesake, robot dogs the company Radeco has dubbed Cerberus will guard the gates of the hell on earth that Trump, the prince of darkness, envisions for the rest of us.

STEVEN SWANGER
Sudbury

KEVIN DIETSCH/GETTY

A Boston Dynamics robot was tested at the Lincoln Memorial July 2 during the Great American State Fair.

We’ll spend billions to gird for storms, but we can’t stop there

So we are preparing to spend billions of dollars adapting to the effects of climate change. Sea walls, levees, and other forms of flood prevention are definitely needed, and there’s no time to waste (“Storm a reminder of city’s vulnerability,” Page A1, Sept. 25).

But remember when steps to decrease carbon emissions, thereby slowing climate change, were deemed “too expensive”?

We still need to decrease emissions, and quickly, to prevent yet more catastrophic consequences. Climate change is still going to be bad, but we can prevent it from being even worse.

Let’s clean up our energy generation, electrify everything, and vote climate.

SUSAN DONALDSON
Northampton

The CDC is absent from flu season. Here’s a guide.

By Ashish K. Jha

Dr. Ashish K. Jha is a senior fellow at the Belfer Center at Harvard Kennedy School and a contributing Globe Opinion writer.

During the 2024-2025 winter season, the Centers for Disease Control and Prevention estimated that roughly 100,000 Americans died from one of three seasonal respiratory viruses: influenza (about 45,000 deaths), COVID (around 45,000 deaths) and RSV (around 10,000 deaths).

This fall, the usual federal vaccine process has broken down. The CDC recently posted interim guidance for flu and COVID vaccinations. The guidance for both remains roughly unchanged since last year, because the committee in charge of providing guidance, the Advisory Committee on Immunization Practices, or ACIP, hasn’t met since last December.

With federal leadership missing, four major physician societies — representing pediatrics, family medicine, obstetrics and gynecology, and infectious disease — issued coordinated recommendations in early September. Massachusetts and other states have issued guidance based on the same work.

Medical societies can review evidence and guide doctors. But they cannot perform the tasks that the CDC handles; they can’t run national vaccination campaigns, give their recommendations legal force for insurance coverage, or buy and distribute millions of vaccine doses through federal programs. Those are federal functions, and this year many are missing or delayed.

So what to do? Here’s what I’m telling the family and friends who keep asking me.

Flu: Everyone 6 months and older should get a flu shot. Last flu season caused tens of thousands of deaths and hundreds of thousands of hospitalizations. To me, this is a no-brainer. Also, 179 kids died of influenza, including many who were previously healthy. Everyone in my family (except the family dog) gets the flu vaccine. My elderly relatives (adults 65 and older) get one of the three versions the CDC preferentially recommends — high-dose, adjuvanted, or recombinant — when one is available. Because flu vaccines’ efficacy wanes over time, for those who haven’t gotten one yet, I recommend getting it around Halloween for optimal protection into the spring, when the flu season wanes.

COVID: In late August, the FDA approved updated COVID vaccines for adults 65 and older and for younger people with high-risk conditions. Healthy younger people can still get one, but that use is off-label. Here’s my simple approach: Every high-risk person (over 65 or with a serious comorbid condition) should get vaccinated. For everyone else, it’s a judgment call. I’m in my mid-50s and will get it; my kids, in their teens and 20s, have opted out, and I’m fine with that. Pediatricians recommend the vaccine for all children 6 to 23 months old without a contraindication. High-risk children should get vaccinated; talk to your pediatrician about the rest.

RSV: Unlike flu and COVID vaccines, the RSV shot isn’t an annual routine. It’s a single dose, recommended once for adults 75 and older and for adults 50 to 74 at higher risk, along with immunocompromised adults and adolescents at any age. For infants, protection comes through one of two routes: vaccinating the mother at 32 to 36 weeks of pregnancy or giving the newborn an antibody shot after birth.

For most adults, these vaccines are available and free. Major insurers have pledged to cover them without

cost-sharing through 2027. Massachusetts requires state-regulated insurers to cover the vaccines its public health department recommends. Self-funded employer plans, which cover roughly two-thirds of workers with job-based insurance, fall outside both protections. Most employers are covering their employees but coverage can vary.

About half of American children are eligible for vaccines through the Vaccines for Children program, which covers children who are uninsured, underinsured, on Medicaid, or American Indian or Alaska Native.

For nearly a month after FDA approval, the CDC left the program in limbo, and only this week did it open ordering for the updated COVID vaccines. During that gap, privately insured children could be vaccinated while children who rely on the federal program could not. For most healthy kids, a few weeks’ delay wasn’t a big deal. For high-risk kids, it was a real risk: a child undergoing chemotherapy left unprotected while the virus spread. Vaccine availability will now vary state to state depending on how quickly each state processes new orders.

Testing and treatment: The second line of defense is early testing, because COVID and flu treatments only work within a short window after symptoms start. Combination tests that check for both flu and COVID (and sometimes other viruses) are available at most pharmacies.

For high-risk patients who test positive, the antivirals are worth discussing with a clinician, although the degree to which they help is unclear. For years, I’ve recommended Paxlovid early for high-risk patients with COVID. I still think it is worth discussing, although how much it reduces serious illness in today’s highly immune population remains uncertain. There are two antivirals against influenza, oseltamivir and baloxavir. The evidence supports faster symptom relief, but again, not clearly reduced serious illness. Guidelines still recommend these drugs for high-risk patients, largely because the downside is small and a modest benefit remains plausible even where trials haven’t nailed it down.

Prevention: The oldest tools still work. Staying home when sick keeps illness out of offices and classrooms. Better ventilation and air filtration reduce indoor transmission. A well-fitting mask in crowded places makes sense for people at high risk and for those who live with someone who is.

Given the yearly toll on seniors, workers, and schools, here’s my wish list for policy makers. First, we need national paid sick leave, because so many workers, especially low-wage workers, have to work while sick if they want to get paid. That’s miserable for the sick worker, their colleagues, and society as a whole — viruses spread more widely, and the burden falls on everyone. Second, we need vaccines that reduce transmission, not just serious illness, since that benefits everyone around the recipient too. And third, a more concerted effort in our schools, work places, nursing homes, and other locations to improve indoor air quality. Respiratory viruses usually spread through the air. Better ventilation and filtration can make indoor spaces safer.

I realize the irony: As the federal government pulls back from its usual role in gathering evidence, issuing guidance, and running vaccination campaigns, I’m asking it to do more, not less. Our CDC has to get back to collecting data, publishing evidence-based guidance, and running the campaigns that keep seniors and children safe. A respiratory season that kills roughly 100,000 Americans means roughly 100,000 families entering the holidays without someone they love.

Extension of center-running bus lane scrapped

►BUS LANES
Continued from Page A1

Chris Osgood. That means the forthcoming red-painted artery will differ from the existing center bus lane that runs less than a mile between Jackson Square and Franklin Park.

In the past, critics have argued the center-running lanes, which split car traffic, go too far in narrowing the roadway and thinning available parking. City officials have countered that it's helped dramatically shorten bus travel times and led to fewer injuries on Columbus Avenue.

The original plan to extend the center-running lane there was supposed to be completed by 2025.

Now the decision to scrap that design is a significant change to a project officials saw as a proof of concept for better bus infrastructure in Boston and beyond. The existing center-running bus lane on Columbus Avenue was the first of its kind in New England and envisioned as a precursor to similar roadway layouts on Blue Hill Avenue and the Lynnway. But in both instances, proposals for center-running bus lanes have faced a firestorm of opposition.

During a Sept. 10 public meeting about the \$163 million revamp of Blue Hill Avenue, Wu tried to put distance between that proposed center-running bus lane design and the one along Columbus Avenue.

Blue Hill Avenue “cannot look like Columbus Ave.,” Wu told the crowd. “It cannot feel like Columbus Ave. The design of the stations over there, how tight it is, the concrete slab — that is not what we need.”

Osgood said Friday that the Columbus Avenue stretch slated for construction in the project's second phase is a suitable candidate for a curbside bus lane because it is not as heavily lined with businesses, loading zones, and parking spots as Blue Hill Avenue or the portion of Columbus Avenue south of Jackson Square that currently has the center-running lane.

Columbus Avenue also largely has two travel lanes per side. By contrast, Blue Hill Avenue is wider than most city streets with three lanes in each direction.

The demand for access to “the curb, whether it's for parking, pick-up and drop-off, or for commercial loading, is simply

DAVID L. RYAN/GLOBE STAFF

Columbus Avenue, home to New England's first center-running bus lane, won't be seeing an extension of that lane.

different in this corridor” of Columbus Avenue, Osgood said. “And that's why the city has been open to side-running [bus lane] in that stretch.”

Asked about the opposition to a similar design on Blue Hill Avenue, Osgood said that “really for me, it is about how to design a street that works for everybody who is both on it and along it.”

“Phase II” of the Columbus Avenue project, he added, also preserves safety improvements for Roxbury Crossing and beyond. That area sees among the highest bus ridership in Boston and is among the city's most dangerous roadways.

Maya Bingaman, a T spokesperson, said in a statement that Columbus Avenue congestion is largely caused by traffic signal delay at intersections, rather than by competition with other cars and delivery trucks like on Blue Hill Avenue.

“With very few curb cuts (driveways), a side-running bus lane can be very successful here,” Bingaman said of Columbus Avenue. She said that the updated curbside bus lane design is also “expected to be less expensive

than the original since there will be less excavation required,” though she did not say by how much.

Chris Friend, interim executive director of the Boston-based transportation advocacy group TransitMatters, said the organization believes center-running bus lanes are “the most effective way to increase speeds and reliability for tens of thousands of daily bus riders” in the Columbus Avenue corridor.

“We hope to see them included in the final design of this project,” Friend said in a statement.

Public officials have otherwise applauded the existing center-running lane on Columbus Avenue, which launched in October 2021 with \$14.5 million of funding. In addition to the bus lane, the project created eight bus stops in the middle of the roadway with roofs, benches, and informational screens. They're separated from the sidewalk with a signalized crosswalk over the car travel lane.

The center lane can also be used by school buses, the T's paratransit service, and emergency vehicles.

City studies have found that the center-running lane shortens bus travel times by up to 4 minutes. As a tradeoff, drivers behind the wheel spent between 20 and 40 seconds more on the road. Roadway injuries on that portion of Columbus Avenue fell by 27 percent in the years after the lane was installed, a steeper drop than the city as a whole, according to City Hall calculations released in 2025.

City surveyors found that most riders were satisfied with the center-running lane and new bus stops. Amanda Brown, a lifelong Roxbury resident who often rides the 22 bus to Jackson Square to get her groceries, said she's among those who like the layout.

“I like the stop better here,” Brown said Tuesday. “It makes me feel safer than being on the sidewalk near the cars.”

But the Columbus Avenue project's “Phase II” northward expansion faced roadblock after roadblock. It became mired in delays after Wu slowed a myriad of street improvement projects amid pushback about bike lanes and other roadway redesigns,

and the city reportedly canceled meetings with the T on the project.

In March, Wu shared an internal letter on social media, in which city officials recommended installing a curbside bus lane on a half-mile stretch of Columbus Avenue to “mitigate bus operational and safety issues” and leave room for cars and T buses during rail shutdowns.

Public meetings on the new design for Columbus Avenue are expected in November, according to a city streets project tracker obtained by the Globe. Construction is scheduled to begin later in 2027 and last up to 18 months, the T said.

The Columbus Avenue extension is funded by \$34 million in federal funds and \$3.3 million in city dollars.

The existing Columbus Avenue bus lane has raised some concerns. Impatient drivers and cyclists occasionally weave through the restricted lane or use it to make U-turns. And some local business owners believe the removal of 52 parking spots for the bus lane in 2021 hurt their bottom line.

Clayton Turnbull, owner of the Dunkin' franchise off Columbus Avenue and Bray Street, said his sales dropped 30 percent and never recovered, once construction of the center-running lane began.

“As a merchant, you depend on convenience for your customer,” he said. “People are looking for places to park.”

And while injuries on the corridor have dropped, the number of crashes seesawed after the center bus lane was installed, and major collisions involving T buses jumped on the corridor in 2023 and 2024, data show.

Opponents of other bus lane projects have pointed to similar concerns.

In Lynn, for example, state officials initially proposed a redesign of the Lynnway with a center-running bus lane. Facing opponents' qualms about safety and congestion, they scaled back the design earlier this year to only include a center lane in the southbound direction, and a curbside bus lane northbound.

The most raucous debate on bus infrastructure is underway on Blue Hill Avenue, the primary thoroughfare through Dorchester, Roxbury, and Mattapan. Its latest design keeps plans for a center-running bus lane, while preserving most of the existing parking and car travel lanes.

Those changes have not quelled the fiercest opponents. Two city councilors, Brian Worrell and Miniard Culpepper, are urging City Hall and the T to eliminate the center-running lane and immediately explore an extension of the Orange Line instead.

“The solution now is to give this community realistic, comprehensive transportation planning, so we understand all the details before we lock ourselves into this project,” Worrell said.

At least one frequent bus rider on Columbus Avenue agrees. Evelyn Foley, a Roslindale resident, said at the Dimock Street bus stop Tuesday that, with a center-running bus lane, “you're opening a can of worms for accidents, here and on Blue Hill Avenue. They need to leave Mattapan alone.”

Some police departments resist switching off Flock cameras

►SURVEILLANCE
Continued from Page A1

At a time of burgeoning concerns over artificial intelligence run amok and the seemingly unstoppable advance of new technologies, license plate readers have become the line in the sand for many residents concerned about their privacy rights and government overreach.

But in their rush to contain the surveillance technology, policymakers in New Bedford and elsewhere are discovering that once police get a taste of it, it is much harder to reverse.

“You want to throw public safety away? You go right ahead in the 21st century. I'm not about to,” New Bedford Councilor Brian Gomes told Burgo at the council meeting, as sporadic heckles could be heard from the audience. “You put this in place, you know what you're doing? ... We're handcuffing the Police Department. We're handcuffing the people of this city. We're handcuffing public safety.”

Indeed, in the face of pleas from their police chiefs that the cameras are useful crime-fighting tools, many municipalities are not getting rid of the license plate readers altogether but rather are taking a breather, or, in some cases, simply switching vendors. The surveillance is still in place, at times with much similar conditions, only just without the Flock name that has become so poisonous in the current political environment.

In Boston, the Police Department ended its pilot with Flock last year, but records showed it quietly launched two pilots with Flock competitors, Axon and Motorola. Salem also intends to switch vendors, after reports found the city's data was included in nationwide immigration-related queries; city officials

have said they will first address concerns about the technology before picking a new vendor.

And in New Bedford, police temporarily stopped using the 20 Flock cameras installed in the city until sufficient safeguards are in place. Police Chief Jason Thody recommended termination for the two officers who allegedly tracked their ex-girlfriends, although the incidents remain under investigation.

Some 40 communities in Massachusetts have so far paused or stopped using Flock in the last year, according to a Globe tally. That patchwork response effectively creates a geographic checkerboard where motorists may not be tracked within their own town but clocked into a database as soon as they run an errand in another community. Even in cases where municipalities have retained the cameras, one may have strict guardrails and frequent audits of their use, while another might freely allow its data to be shared nationwide.

The patchwork also somewhat undermines a key selling point of the technology, that by linking all those individual cameras into one big network, police can track a suspect more effectively over a larger area.

“It's going to be very inconsistent if each and every city council, police department, mayor, first selectman ... tries to figure this out just for their own community,” Thody, the New Bedford police chief, said in an interview. “Here we are doing something just for New Bedford, and yet right next door, somebody could have a totally different standard.”

Law enforcement leaders are wrestling with granular questions such as how long they should keep records of the trav-

MARK STOCKWELL FOR THE BOSTON GLOBE

A protester held a sign in the balcony of council chambers at New Bedford City Hall during a contentious City Council meeting in September.

els of their residents, what other agencies can access that data, and how often queries by their officers should be audited, said Michael Bradley, executive director of the Massachusetts Chiefs of Police Association.

“Sometimes ... the technology gets out in front of the policy,” Bradley said.

The Massachusetts Municipal Association, which represents all 351 municipalities, hasn't offered guidance to towns on Flock because no one has asked for it, said executive director Adam Chapdelaine. The group will consider how to support towns navigating the issue, he said.

Thody, the New Bedford chief, called on the Legislature or state agencies responsible for training and certifying police to regulate law enforcement uses

of the technology statewide.

While any response at the state level doesn't appear imminent, some lawmakers are drafting legislation.

Representative Adam Scanlon, a North Attleborough Democrat, and Representative Marcus Vaughn, a Wrentham Republican, announced in September they are writing a submission for the next legislative session to standardize statewide requirements for searches, along with data-retention and data-sharing restrictions.

“We need to ensure that everybody has the same protections in place, and no less than the other,” Scanlon said.

At the national level, congressional representatives recently held a hearing about the license plate-reading cameras and invited executives from

Flock, Axon, and Motorola. None attended.

In the face of a fast-developing backlash, Flock in August announced changes to its system, including an automatic auditing tool to flag patterns of misuse. The company will also require officers to enter the case number of an authorized investigation for any search, and would allow departments to prohibit certain kinds of searches by other agencies, such as for immigration purposes.

“We support thoughtful, bipartisan legislation that puts strong privacy, transparency, and accountability guardrails in place while preserving law enforcement's ability to use technology responsibly to keep people safe,” a Flock spokesperson said in a statement.

Axon and Motorola did not

respond to a request for comment.

With movement seemingly unlikely to happen fast from the top down, local organizers at the ground level are pushing for change. Nick LeBlanc, a New Bedford resident and teacher, has become a key activist there since he spotted a camera posted near his front door in July.

LeBlanc, 37, sifted through troves of documents from the city and was the one who first informed the City Council of the existence of the cameras.

The topic has since snowballed into a large bipartisan response, mostly against the cameras.

The New Bedford City Council meeting on Sept. 24 was fiery at times, as people gathered outside in protest of Flock, clutching signs including one saying “the NBPD can't be trusted with Flock.” Inside, a person was removed in handcuffs for repeatedly interrupting.

In introducing his proposal, Councilor Burgo urged Mayor Jon Mitchell to allow the ordinance to pass. He later told the Globe he expects Mitchell will veto the measure, which could kill it or push an attempt to override it until mid-November, right before the Flock contract expires.

LeBlanc has no plans to ease up on the pressure, and hopes other towns and cities are following what happens in New Bedford.

“There's a hope,” he said, “that maybe by pushing back on our own City Council and pushing back on our mayor and pushing back on our chief, you can sort of set the tone for other communities.”

THE BOSTON GLOBE MONDAY, OCTOBER 5, 2026 | BOSTONGLOBE.COM/METRO

‘I knew it was that big. People have been calling me for 20 years. It gets me worked up a little bit about it, and there’s a little bit of anger. But you know, the anger’s been there for a long time.’

FRANK FITZPATRICK, *a victim, upon hearing of the new report*

For one victim, clergy abuse report is validation

By Janelle Nanos
GLOBE STAFF

Frank Fitzpatrick was on his couch in Pascoag, R.I., on Wednesday when the memories came barreling back, just as they have every day since they first surfaced in 1989.

This time, the prompt was Massachusetts Attorney General Andrea Campbell and her press conference that unveiled devastating findings from a seven-year-long state probe into abuse within the Catholic dioceses of Fall River, Springfield, and Worcester. After years of interviews, her office found more than 270 abusive clerics who had harmed nearly 1,000 victims,

Frank Fitzpatrick helped uncover many cases, including those of notorious priest

and a deep-seated culture of institutional corruption that allowed abusive priests to be shuffled among parishes for a half century.

It was one of the most comprehensive looks yet in the decades-long examination of how the Catholic Church failed to protect children in Massachusetts. Yet due to various “legal constraints,” as Campbell put it, no one is likely to be charged with any crimes.

None of this was news to Fitzpatrick, himself a victim of a notorious

priest while growing up in North Attleborough, and a longtime advocate for survivors.

It has been more than three decades since Fitzpatrick became the first person to disclose the crimes of the Rev. James R. Porter, a serial abuser who served parishes in North Attleborough, Fall River, and New Bedford. A decade before the Globe’s groundbreaking 2002 Spotlight investigation into the Boston archdiocese, Fitzpatrick’s disclosure to the Globe led to Porter’s con-

viction. Some 34 years later, he’s still grappling with the scope of the harm.

“I knew it was that big. People have been calling me for 20 years,” he said on Thursday, a hint of frustration evident in his voice. “It gets me worked up a little bit about it, and there’s a little bit of anger. But you know, the anger’s been there for a long time.”

It began in 1989, when Fitzpatrick began experiencing what he’d later describe as a “great mental pain.”

He was 39, happily married with two sons and living in Cranston, R.I., but he felt consumed by a puzzling mix of sadness, anger, and a bitter sense of

Search for missing airplane suspended

Boston-bound jet vanished Saturday

Debris located off the coast of Nantucket

By Allyson Chiu
and Michaela Towfighi

GLOBE STAFF

The US Coast Guard suspended the search Sunday for six passengers who were aboard a medical transport flight that vanished while flying from Bermuda to Boston the prior day, authorities said.

The jet went missing early Saturday morning, and searchers found debris about 20 miles off the coast of Nantucket, but the people aboard the jet were not located.

Among the six passengers were four Canadian nationals and two Bermudian nationals, the Coast Guard confirmed in a statement. Their names were not released.

The passengers’ next of kin have been notified, authorities said.

“Suspending a search is not an easy decision,” Matthew Lake, the Northeast district commander for the US Coast Guard, said in a statement on Sunday evening. “We express our deepest condolences to the families and loved ones affected by the tragedy and our gratitude for our partner agencies who helped support search efforts.”

Search crews covered more than 4,445 square miles over about 66 hours, Lake said.

The Coast Guard launched the search off Nantucket after the transport flight disappeared early Saturday. Air traffic controllers in New York and at the Boston air traffic control center in Nashua, N.H., had struggled to communicate with the jet as it plunged toward the Atlantic Ocean.

“You’re coming in blind? Is that what you said?” a controller asked the pilot at about 12:46 a.m. “Are you declaring an emergency, or no?”

The pilot’s response, according to a recording captured by LiveATC.net, was not audible.

ICE raids cast chilling shadow over New Bedford

Businesses feel customer slowdown

By Omar Mohammed

GLOBE STAFF

NEW BEDFORD — In recent days, Acushnet Avenue, typically a busy commercial area populated by restaurants, retail stores, and mini-markets in the city’s North End, has been quiet. Locals have stayed away since the recent immigration raids, in which at least 24 people were arrested — many in front of small businesses.

For Iris de la Rosa, owner of Mexican restaurant Taqueria La Raza, her business has barely seen customers since someone was picked up outside her restaurant on Sept. 22 during the latest US Immigration and Customs Enforcement surge on the South Coast.

“If the business continues like that, I think I have to close the door because it’s too much,” de la Rosa said. “I can’t pay the bill, the mortgage, because I own that building.”

The latest arrests by federal agents have had a chilling effect on local immigrant businesses as people in the community are hunkering down in their homes — even as Mayor Jon Mitchell urged residents last week to visit the area’s establishments — too nervous to go to work, eat at restaurants, or step into their local grocery store in fear that they could be next.

The chilling effect, advocates say, hurts immigrant small businesses — and the immigrant community as a

DOGS HAVE THEIR DAY AT OLD NORTH

JESSICA RINALDI/GLOBE STAFF

Reverend Holly Hartman blessed an 8-year-old golden retriever named Teagan (center) during the Old North Church Blessing of Animals Feast of Saint Francis of Assisi in Boston Sunday.

Blessings extend to beloved pets on annual Feast of St. Francis of Assisi

By Gitana Savage

GLOBE CORRESPONDENT

Dozens of dog owners brought their furry friends to Paul Revere Mall Sunday afternoon for the annual Blessing of the Animals at the Old North Church.

Hosted in partnership with RUFF, a North End dog nonprofit, pups big and small gathered outside for group and individual blessings in honor of the Feast of St. Francis of Assisi, the patron saint of animals.

Brandon McNelis traveled from the South Shore to bring his 4-year-old Golden Retriever, Pemi, to the event. For him, getting Pemi blessed was an important step in ensuring her long-term health.

“We obviously treat Pemi like a family member,” McNelis said. “We love her very much. She went through a couple health issues recently. She’s doing great, but we thought this might be a nice way to continue to help with her recovery.”

St. Francis of Assisi, who lived in the 12th and 13th centuries, was known for his love of animals and nature. The Feast of St.

Francis, held annually on Oct. 4, celebrates his life and legacy through charity, time spent in nature, and, of course, animal blessings.

Old North Church holds their Blessing of the Animals on the first Sunday of October each year. This year, the event fell on the feast day itself.

Rev. Dr. Matthew Cadwell, Old North’s Vicar, led Sunday’s blessing. He said the event has become tradition for dog lovers in the North End and beyond.

“It’s a tradition that’s just evolved and

Search for missing boater is called off

By Aayushi Datta and Lauren Albano
GLOBE CORRESPONDENTS

The US Coast Guard has suspended its search for a 37-year-old man who went missing Saturday after a boat crash in Manchester-by-the-Sea that left another man dead, officials said.

The decision to cease the search for the man, who was identified as Jim Wolcott of Hamilton by his father, Charlie Wolcott, was not made lightly, officials said in a statement Sunday evening.

“Our deepest condolences are with the family and loved ones affected by this tragedy. We are grateful to our local, state, and federal partners who supported the search efforts,” said Captain Jamie Frederick, Sector Boston commander.

Jim Wolcott, two men, and a dog had been boating off the coast of Manchester-by-the-Sea on Saturday. Before 4:30 p.m. Saturday, Coast Guard Sector Boston watchstanders received a report of a vessel doing slow circles south of Graves Beach in Manchester-by-the-Sea with no sign of anyone onboard, the Coast Guard said in a statement Sunday. Petty Officer 3rd Class Lyric Jackson, a Coast Guard spokesperson, said the boat struck rocks and began spinning out of control.

The two other men, ages 67 and 65, were located and taken to area hospitals. The 67-year-old has since been declared dead, officials said.

The dog was recovered from the distressed boat and reunited with its family, officials said.

“It was a terrible accident, and we are in deep shock and sorrow,” Charlie Wolcott said in a phone call with the Globe on Sunday.

Air Station Cape Cod crews flew over the area Saturday, and Station Gloucester crews searched overnight and into Sunday morning. At around 9:44 a.m. Sunday, Mass. Environmental Police began searching the area with side-scan sonar and a dive team, officials said.

Responders also included State Police, Environmental Police, Gloucester police, the Beverly Fire Department’s dive team, and harbor masters from five communities, officials said.

Motorcade honors Boston firefighter ‘Bobby’ Kilduff Jr.

By Gitana Savage
GLOBE CORRESPONDENT

Motorcyclists traveled from Stow to Dorchester on Sunday morning in a procession honoring Robert “Bobby” Kilduff Jr., the Boston firefighter and Marine veteran who died battling a fire earlier this year.

Kilduff died in May after falling from a third-story window while battling a three-alarm fire in Dorchester.

Sam Dillon, president of Boston Firefighters Local 718, estimated that hundreds of people turned out for the procession and gathering that followed.

“It’s still pretty new, pretty solemn,” Dillon said in a phone interview. “Bobby only passed several months ago, but [today] was definitely upbeat. It was nice to get everybody together. It was nice to see people from outside of Boston recognizing Bobby’s service, his sacrifice. I know it meant a lot.”

Sunday’s procession gave friends, colleagues, and community members an opportunity to come together and remember Kilduff, whose impact extended beyond his work as a firefighter.

“I always say Bobby knew you needed his help before you did,” Dillon said. “Even when we were planning his funeral, I must have reached for my phone three or four times during the week to actually call

PHOTOS BY PAT GREENHOUSE/GLOBE STAFF

Bobby because I needed help with something, and then remembered that we’re actually planning his services. That’s

just the kind of guy he was.” The procession began at the State Fire Academy in Stow and ended at Florian Hall in Dor-

chester, the headquarters of Local 718. The event also raised money to support Kilduff’s family.

The Men of Fire Motorcycle Club arrived at Florian Hall in Dorchester for its first annual fall fund-raiser, the Bobby “BK” Memorial Bike Ride, to benefit the family of Boston firefighter Robert “BK” Kilduff Jr. on Sunday.

Kilduff was a third-generation Boston firefighter and US Marine veteran.

“Bobby Kilduff was a hell of a firefighter, was a hell of a United States Marine veteran,” Dillon said. “He was just a hell of a person.”

Mass. hiker, 64, dies on N.H. mountain, officials say

By Collin Robisheaux
GLOBE CORRESPONDENT

A Massachusetts man died while hiking a mountain in New Hampshire Saturday morning, officials said.

Emergency services responded to West Rattlesnake Mountain in Holderness around 11:20 a.m. Saturday, according to a statement released by the New

Hampshire Fish and Game Department.

Richard Chateaufneuf, 64, of Tyngsborough was found unresponsive about three-quarters of a mile from the trailhead, according to the statement.

A group of good Samaritans was administering CPR when emergency services arrived, but Chateaufneuf could not be re-

vived and died at the scene, according to the statement. His body was carried to the trailhead.

Officials did not specify what caused the medical emergency.

The Fish and Game Department encouraged hikers to prepare themselves before venturing out into the wilderness, and bring these essential items: a

map, compass, warm clothing, extra food and water, headlamp, fire starter, first-aid kit, whistle, rain/wind jackets and pants and a knife.

No further information was immediately available.

Collin Robisheaux can be reached at collin.robisheaux@globe.com.

Victim waited a long time for AG’s report on clergy sex abuse

►FITZPATRICK
Continued from Page B1

betrayal.

“I really felt like everything was good in my life,” he recalled. “I was saying to myself: ‘Why do I feel so crappy all the time?’”

As Fitzpatrick told the Globe in 1992, and recounted again recently, he tried to linger in those uncomfortable feelings. Lying in bed one day, he began to remember the sounds of heavy breathing and the experience of being sexually molested as 12-year-old altar boy in North Attleborough. In time, he’d come to realize that his abuser had been the priest at St. Mary’s Church: Father Porter.

Fitzpatrick had loved Porter and hoped to enter the priesthood himself one day. One evening, Fitzpatrick recalled, Porter promised to take him to a ballgame. Instead, Fitzpatrick told the Globe that Porter took him back to his home, fed him mincemeat pie spiked with rum, and raped him.

Troubled by these memories, Fitzpatrick wondered what had become of Porter. He contacted the head of the Fall River Diocese, who told him they didn’t know where Porter was, and that it was “best to leave it in the hands of the Lord.”

Undeterred, Fitzpatrick began calling his former Catholic school classmates and was shocked at what he found: The first person he called revealed he, too, had been abused by Porter. Fitzpatrick had started his quest hoping to find his abuser; he ended up finding Porter’s victims instead. A 1993 Globe magazine story identified 68 victims in North Attleborough alone.

“I think it was because I did not confront people with the big question” — did Porter abuse you? — “that they opened up to me,” he’d write later. “The extent of the abuse by Father Porter was so great that for a long time every single classmate that I contacted from St. Mary’s confided they too had been victimized.”

Fitzpatrick was himself a private investigator, but back be-

SUZANNE KREITER/GLOBE STAFF

Frank Fitzpatrick was the first victim to come forward about Rev. James Porter’s abuse in the Fall River Diocese. The attorney general’s office has reported that it found more than 270 abusive clerics who had harmed nearly 1,000 victims.

fore Google, it was still remarkably difficult to find someone who didn’t want to be found. So he placed local newspaper ads asking: “Remember Father Porter? Contact Frank Fitzpatrick” and quickly heard from over a dozen victims. Yet Porter himself proved elusive.

Eventually, Fitzpatrick found a newspaper obituary for Porter’s father, and learned the former priest was married and living just outside St. Paul, Minn. Next, Fitzpatrick tracked down his phone number.

On Feb. 19, 1990, Fitzpatrick finally got up the nerve to call Porter.

Porter’s wife answered the phone, Fitzpatrick recalled. He asked her if the couple had chil-

dren — they had four — and if she knew that Porter had sexually abused boys. She told him she didn’t believe him. Then she handed Porter the phone.

As Fitzpatrick told Porter what he knew, he said, Porter acknowledged the abuse, telling him “how fortunate” he was that he didn’t get caught, “by parents, the law, anything else.”

Unbeknownst to Porter, Fitzpatrick was recording the call, using a portable tape recorder, he had suction-cupped to his phone. They spoke another three times. Fitzpatrick took the tapes to the media in 1992. And in May of that year, Frank Fitzpatrick’s story landed on the front page of the Globe, where he recounted his experiences

alongside eight other victims. The recordings aired on WBZ, with Porter admitting to molesting 50 to 100 children.

“Once the story broke in the national news, I started to get hundreds and hundreds of phone calls from survivors of priests from all over the country,” Fitzpatrick said this week.

Although cases of clergy abuse were beginning to crop up around the nation, the Porter case was, at the time, viewed locally as a nefarious one-off. In his first public statement, Cardinal Bernard Law called Porter a “rare exception.” Yet the scope of Porter’s abuse — and the possibility of the church’s awareness — became clearer over time.

Eventually, 77 men and 22

women came forward to report Porter’s abuse. He was indicted in September 1992 for dozens of crimes in five different parishes in Massachusetts and pled guilty in 1993 to 41 counts of abuse. He was sentenced to 18 to 20 years, and completed his sentence in 2004, but continued to be committed. Porter died a year later, while awaiting the results of a sexual dangerousness hearing.

After Porter was sent to prison, Fitzpatrick continued his work, creating a nonprofit called Survivor Connections to support victims in gathering evidence and seeking justice against their abusers.

He built a database on his home computer allowing vic-

“The extent of the abuse by Father Porter was so great that for a long time every single classmate that I contacted from St. Mary’s confided they too had been victimized.”

FRANK FITZPATRICK
Victim of clergy abuse

tims to share information about their abusers. In newsletters, Fitzpatrick outlined the nuances of recording phone calls and navigating civil and criminal charges. While other advocacy groups had offered survivors support for living with their trauma, Fitzpatrick had tapped into something different: a network effect.

Today, Fitzpatrick is 76, retired in small-town Rhode Island. He’s not as active in advocacy these days, though he still occasionally gets phone calls from survivors. This week, when his phone rang once more, he told a reporter this current probe felt “really important.”

Campbell’s report included a section about Porter. It noted how “each time Porter was returned to ministry after a hospitalization, he quickly re-engaged in past actions, molesting the children of his parish.” It was validating, Fitzpatrick said, to see the state’s top lawyer backing things that survivors like him have claimed for decades.

“I’m glad the attorney general finally got around to investigating it,” he said. “I mean, they started this investigation in 2019 — I wish they had started it in 1992.”

Search suspended for passengers on medical plane

► **PLANE CRASH**
Continued from Page B1

The airplane, a Gulfstream G100 that took off from Bermuda late Friday, was carrying a patient and family member as well as a four-person crew.

As the jet approached Nantucket, its pilot reported electrical failures, according to radio transmissions. Data from the website FlightAware show the plane descended thousands of feet within three minutes.

Shortly afterward, around 1 a.m., it disappeared from radar entirely.

Steven MacKinnon, the leader of Canada's public transportation agency, declined to identify the people on board the flight. The Bermuda Gazette reported that the two passengers aboard were a medical patient and a companion.

In a statement, the Bermudian government said it was in touch with the families of the passengers and US search crews.

"We are praying that all six people will be found safe," said Bermuda Premier David Burt.

The plane left L. F. Wade International Airport in Bermuda for the 800-mile flight to Boston at 11:41 p.m. on Friday, said Ciara Eve, an airport spokesperson. Bermuda, a self-governing British territory, is one hour ahead of Eastern Daylight Time.

For much of the flight, the Gulfstream jet traveled at about 24,000 feet, but at about 1:04 a.m., FlightAware data show the plane descended 13,000 feet within three minutes.

The flight did not land at Logan and the plane wasn't found at the airport on Nantucket.

Until the jet's black box is located, it remains difficult to know exactly what happened onboard before the plane vanished, Mike Slack, a pilot and aviation lawyer, said.

But flight tracking data shows the plane plummeted at a rate of several thousand feet per

JESSICA RINALDI/GLOBE STAFF

"Suspending a search is not an easy decision," Matthew Lake (center), the Northeast district commander for the US Coast Guard, said in a statement.

minute, suggesting the aircraft likely lost control, he said.

"Clearly, an aircraft descending at over 4,000 feet a minute from 24,000 feet to 11,000 is out of control," said Slack, managing partner of Slack Davis, a personal injury law firm in Texas. "No pilot would do that if they were in control of the aircraft."

A Gulfstream G100 is a "high-performance" jet, but can be dif-

ficult to manage if control is lost, especially at night over the ocean, Slack said. In these types of planes, pilots typically might have about 10 to 20 seconds to react to a problem, he said.

But with the aircraft descending so quickly, the G-loads would have been significant, making it extremely difficult for crew members — if they were still conscious — to take action,

he said. The plane also could have experienced a "catastrophic structural failure" during the rapid descent, he added.

The search for the Boston-bound jet unfolded in waters south of Massachusetts, where another plane went missing 25 years ago when John F. Kennedy Jr. crashed his single-engine plane west of Martha's Vineyard.

His wife, Carolyn Bessette-

Kennedy, and his sister-in-law, Lauren Bessette, were also on board.

This weekend's incident comes days after another medical transport flight crashed off the coast of Southern California, leaving three dead. Five people were aboard the helicopter when it went down near Catalina Island, about 20 miles southwest of Los Angeles. Two survivors

were recovered from the water.

ICE raids unsettle New Bedford immigrant businesses, patrons

► **NEW BEDFORD**
Continued from Page B1

whole — in a city of 100,000 people, a fifth of whom are foreign born, advocates say.

Even those who are documented, de la Rosa has noticed, believe their status alone might not prevent them from being arrested by ICE — and that, too, has contributed to the slow foot traffic, she believes.

"Many of the businesses that we work with, whether they run a restaurant or a convenience store or a retail shop, depend on their customer base that comes from the immigrant community," said Corinn Williams, director of the Community Economic Development Center of Southeastern Massachusetts. "When ICE sweeps through a neighborhood and kind of terrorizes a customer base, a lot of people stay away."

New Bedford has a deeply rooted immigrant community. Portuguese and Cape Verdeans settled in the area and worked in the lucrative whaling industry in the 19th century. Central Americans, who arrived in the 1980s and 1990s, staffed the fishing houses and assembly lines of textile mills.

"When we see the sort of harsh presence at supermarkets and other places, these are places we go to every day," said Derek Santos, the executive director of the New Bedford Economic Development Council. "We're not

outside of this community ... It's incredibly upsetting."

Santos's organization does not have data to fully quantify the impact of the raids on the local economy. But anecdotally, whispers that federal agents are snatching people on the streets have kept people away from patronizing local businesses, he said. "It's incredibly disruptive to the larger economy," he said. "We know for a fact New Bedford's not alone. We may have different populations here, but the impacts, I think, are universal across the country."

Martín Ordoñez, owner of Restaurante y Tortillería Guatemalteco on Acushnet Avenue, is facing similar challenges after a customer was detained by agents two weeks ago outside his establishment. Since then, business has plunged an estimated 50 percent, he said. His concern, though, goes beyond the impact the latest ICE activity will have on his Guatemalan restaurant. He is worried about his community.

"It's about our neighbor[s], our people," he said.

Hector Grave, who owns a business selling fishing nets, said reports that even green card holders have found themselves detained have him feeling like no one is safe.

Grave is Guatemalan and is documented through the Deferred Action for Childhood Arrivals program, or DACA. He has

PAT GREENHOUSE/GLOBE STAFF

The presence of federal ICE agents on New Bedford streets, home to 100,000 people — about one-fifth of whom are foreign-born — has kept people home and away from local businesses.

been running his business since 2012. He said he cannot afford to stay home, advice that some local advocates have shared to keep people from getting embroiled in ICE sweeps.

"I have to work. I have to comply with my responsibility as a business owner to my clients," he said. "I am just hoping that things could change. It's a mess now with inflation and now this. It seems like it's going from bad to worse."

He said that people just want to get on with their lives and care for their families.

"It's sad. People are just trying to bring food on the table, make a living," he said.

Ondine Sniffin, an immigration lawyer in New Bedford, said the people being detained were mostly workers in the area, most of whom are from Central America, with some from Mexico and — on at least one occasion — an individual from Haiti. Several worked at the seafood processing plants down at the ports in New Bedford, she said.

"This has a ripple effect, as do so many of the ICE enforcement actions that they've been carry-

ing out nationwide. Already, people are staying home. People are not going into work," she said.

The harsh immigration policies that have hit the community have some local immigrant business owners making contingency plans should they get deported, according to Guelmie Santiago, who runs Santiago Professional Services in New Bedford, which offers tax advice and helps register small businesses. Her clients are stressed and anxious about their futures, she said.

"People don't know what will

happen, because if they get deported, how the mortgage will [be paid] ... and they would like to have a plan B in case something happens," Santiago said.

In recent months, families are asking to create caretaker affidavits, so if they are ensnared by ICE, there will be someone there to care for their children.

"It is pretty sad that a parent, a family, [has] to source that because they don't know when this could happen," she said.

Santiago has been advising immigrant businesses for more than a decade and said she has never seen the level of anxiety that has now gripped the immigrant community in New Bedford. The fear is even worse now than in the aftermath of the raid at a leather factory nearly 20 years ago, when more than 360 undocumented immigrants were detained by immigration authorities, she said.

She sees it in her own family, even though she is Puerto Rican. Her 14-year-old granddaughter has told her to be careful, worried that she could be caught up in ICE raids.

"This is not about being legal or illegal," Santiago said. "This is about kids that, even though they're legal, they're seeing all this happening, and they don't know who's secure."

St. Francis feast gives paws to extend blessings to family pets

► **ANIMALS**
Continued from Page B1

has become pretty central to our fall, and it's such a joy to give thanks and to have a special day for pets who bring so much love and comfort and hope to people," Cadwell said.

For many attendees, the annual blessing is also a way to connect with the local dog-owning community.

Sam Kridgen and Emily Baudier met several months ago in RUFF's North End Dog Park, and the pair — along with their pups, Fenway and Charlotte — immediately hit it off.

"[Fenway and Charlotte] love

riding in the car together. They're just two peas in a pod," Kridgen said.

"It's really nice to have friends that you're friends with, and also that your dogs are friends with, too."

Though Sunday was Baudier's first time attending the Blessing of the Animals, Kridgen has attended every year since she's had Fenway. For her, it is the sense of community that keeps her coming back.

"Just [knowing] someone else is looking out for their dog ... it's kind of nice," Kridgen said. "It brings community to all of us."

Margaret Richardson, a Downtown resident, brings her 19-year-old dog, Effie, and 8-year-old dog, Ollie, to the blessing every year.

Richardson never intended to be a dog owner, but after a family member passed away eight years ago, she agreed to take in Effie and Ollie. Her life hasn't been the same since.

"I thought, 'Oh, I'm never going to be able to take care of two little dogs,'" Richardson said. "But they've just been a blessing. It's been so good, it's changed my life."

For Cadwell, the annual blessings offer more than spiri-

JESSICA RINALDI/GLOBE STAFF

Rev. Dr. Matthew Caldwell blessed Rosie during the Blessing of the Animals at Old North Church in Boston Sunday.

tual reflection. It also brings people and their pets together in a world where opportunities for connection can be hard to find.

"We live in such an isolated world," Cadwell said. "I know particularly after COVID, people were so isolated, so any opportunity we have to actually be outside and to meet other people, and through pets, it's a fantastic opportunity to experience God's love."

Tony Reno, 52; football coach won second-most games in Yale history

ASSOCIATED PRESS
NEW HAVEN — Former Yale football coach Tony Reno, who led the school to five Ivy League championships over 14 seasons, has died, the school announced Friday. The Oxford native was 52.

No cause of death was given. Mr. Reno resigned as Yale’s coach in February because of health reasons and had been on medical leave since the end of last season.

“Tony Reno devoted his life to serving others and approached every day with humility, compassion, and purpose,” Yale athletic director Victoria Chun said. “He believed deeply in the power of mentorship and invested wholeheartedly in the success and well-being of his players, colleagues, and friends.”

Mr. Reno went 83-49 during his tenure, finishing second in the program in career victories behind Carm Cozza, who was 179-119-5.

Mr. Reno leaves his wife, Toni, and their children, Dante, Angelina, and Vince.

Dante Reno quarterbacked the Bulldogs to a 9-3 record and the Ivy League championship last season.

Playing in its first postseason game, Yale came back from a 42-14 deficit in the third quarter to defeat Youngstown State 43-42. Eventual FCS champion Montana State defeated Yale 21-13 in the next round.

The Bulldogs finished 13th in the FCS rankings.

Among his honors were Ivy League Coach of the Year in 2022 and two selections as the Jack Grinold Division I Coach of the Year, chosen by the New

WINSLOW TOWNSON/ASSOCIATED PRESS/FILE

Mr. Reno, pictured at center in 2016, led Yale’s football team to five Ivy League championships over 14 seasons.

England Football Writers. “While his accomplishments on the football field were remarkable, it is the relationships he built and the lives he changed that will define his enduring legacy,” Chun said. Mr. Reno was born in Oxford and transferred to Worcester State as a sophomore and would start at strong safety for the next three years, emerging

as a coach on the field. “He just [had] a great understanding of what was going on,” Brien Cullen, longtime head coach at Worcester, told The Boston Globe in 2013. Mr. Reno would later serve as defensive coordinator at his alma mater before joining the Yale coaching staff in 2003. He would then serve for three seasons as special-teams coordi-

nator at Harvard under longtime Crimson coach Tim Murphy. Yale hired Mr. Reno to replace Tom Williams as head coach in 2012. In the transition, Mr. Reno added some spice to the century-old Harvard-Yale rivalry, taking with him three Harvard coaches. His Yale team struggled in the first season but blossomed

after that. “The first day Coach Reno came in, I knew that Yale football was going in the right direction,” senior captain Beau Palin recalled to the Globe in 2013. “I was certain of it.” Mr. Reno would go 7-6 against Harvard during his time leading the Bulldogs, including winning seven out of the last nine meetings.

Lyle Odelein, Stanley Cup winner with Canadiens, 58

ASSOCIATED PRESS
MONTREAL — Lyle Odelein, a defenseman who won a Stanley Cup with the Montreal Canadiens in 1993 and played for several other NHL organizations, has died. He was 58.

Mr. Odelein’s death on Friday was confirmed in social media posts by several teams he played for. No cause of death was provided. He played the last of his 16 NHL seasons with the Penguins in 2005-06 and lived in the Pittsburgh area.

The native of Quill Lake, Saskatchewan, was a seventh-round pick of the Canadiens in 1986 and played in 1,056 NHL games with Montreal, New Jersey, Phoenix, Columbus, Chicago, Dallas, Florida, and Pittsburgh. He was the first captain of the Columbus Blue Jackets when the team joined the NHL in 2000.

He scored 20 goals and had 75 assists in 420 games with Montreal between 1990 and 1996 and ranks second in franchise history with 1,357 penalty minutes, leading the team in that category in each of his six seasons. In his career, he totaled 252 points (50 goals, 202 assists).

Mr. Odelein contracted a near-fatal blood infection in 2018, apparently when he was pricked by a cactus while playing golf in Arizona. The infection traveled to Mr. Odelein’s heart and his organs began shutting down, so he needed liver, kidney, and aortic valve transplant surgery, according to KDKA-TV.

Mr. Van Note spent all 18 seasons of his NFL career with the Atlanta Falcons. He retired in 1986.

Jeff Van Note; played football for Atlanta; 80

ASSOCIATED PRESS
ATLANTA — Jeff Van Note, a six-time Pro Bowl center who spent all 18 seasons of his NFL career with Atlanta and was inducted into the team’s Ring of Honor in 2006, has died, the Falcons announced Friday. He was 80.

The team did not announce a cause of death.

“We mourn the loss of a true Falcons legend,” Falcons owner Arthur Blank said in a statement released by the team. “Jeff Van Note dedicated 18 seasons to this franchise and became one of the most respected and beloved players in our history. He embodied toughness, resilience, humility, and an unwavering commitment to his team, qualities that earned him the admiration of generations of Falcons fans.”

Mr. Van Note, selected out of Kentucky in the 11th round of the 1969 NFL draft, originally joined the Falcons as a linebacker before being moved to center by then-coach Norm Van Brocklin. He earned the starting job a year later and started 226 of 246 games over his 18-season career. He was a second-team All-Pro in 1979 and 1982.

After retiring in 1986, Mr. Van Note became a color commentator and made Atlanta sports radio appearances.

“Jeff’s contributions to this organization cannot be measured solely by his accomplishments on the field,” Blank said. “He helped shape the identity of the Atlanta Falcons and left a legacy that will endure for years to come. We are grateful for everything he meant to this franchise and our community. Jeff will always hold a special place in the history and heart of the Atlanta Falcons.”

vided child care for those appearing in court. “He was the real thing — a man who gave himself to the cause of social justice, but not in an abstract way at all. He did so with deep humanity,” said the writer James Carroll, his longtime friend. “He was the best of us.”

Judge Houston, who also was a novelist and worked to bring musicians into city schools to promote the arts, was 82 when he died Sept. 10. He lived in Brookline and his health had been declining.

“As a public figure, he was a catalyst for change — bettering and enriching the lives of others,” said his wife, Susan Houston, former executive director of the nonprofit MassEcon, which helps companies relocate or expand in the state. “He dreamed big and inspired those around him to help bring those dreams to life.”

Judge Houston is among the civil rights heroes whose names are inscribed in paving stones around “The Embrace,” the Boston Common sculpture honoring the Rev. Dr. Martin Luther King Jr. and Coretta Scott King. Along with his Boston activism, he took time off from college to work as a community organizer in Harlem during the civil rights era.

He also was a force behind “Long Road to Justice: The African American Experience in Massachusetts Courts.”

In 2018, the traveling multimedia exhibition was permanently installed in the Edward W. Brooke Courthouse, named for the late Massachusetts politician who was the first popularly elected Black US senator.

“I think that for a lot of young lawyers — and I was a young lawyer when I first met Judge Houston — the idea that there was somebody like us on the bench was affirming and aspirational,” former governor Deval Patrick told the Globe in 2018, when “Long Road” opened at the courthouse.

“Pardon the superlatives, but this guy is just an extraordinary human being,” former governor Michael S. Dukakis, who appointed Judge Houston to both of his judicial posts, told the Globe then.

During Judge Houston’s early years at Roxbury District Court, he was taken aback by the sight of young children ac-

SUZANNE KREITER/GLOBE STAFF/FILE

Judge Houston, pictured on the second floor of the Edward W. Brooke Courthouse in 2018, sought fairness in his career.

companying adults who appeared before him.

“The only place for them was to sit in the courtroom, where they were exposed to all kinds of descriptions of violence and drugs,” he told the Globe in 2018. “It was awful. I said, ‘We can do better than this.’”

He went on to establish court-based child-care centers that provided children with places to stay in more than a dozen Massachusetts court buildings, until funding was cut in the early 2000s.

Linking historical accomplishments to modern-day activism, Judge Houston also helped found the George Lewis Ruffin Society in 1984. Ruffin was the first Black graduate of Harvard Law School, and the first Black candidate elected to the Boston City Council.

The society, now based at Northeastern University, supports “the advancement of minorities in the field of criminal justice and the legal field at large,” according to its website.

Judge Houston played a key role in founding the nonprofit Roxbury Youthworks, which opened in 1981 and now offers a range of programs to help guide the lives of at-risk youths. A committee he convened recommended that Youthworks be

launched. “He dedicated his life to helping any youths who were at risk in the City of Boston,” said Mia Alvarado, the agency’s executive director. He also served on its board, and stepped down as president about five years ago.

She added that Judge Houston “was one of the kindest, most caring men that I knew.”

Born in Richmond, Va., on July 19, 1944, Julian Towns Houston was an only child. His mother, Alice Jackson Stuart, was an educator. She and Julian’s father divorced, and after she remarried, Judge Houston grew up in New Jersey with her and his stepfather, Dr. J. Earle Stuart, a physician.

Judge Houston graduated from the private Hotchkiss School in Lakeville, Conn., before going to Boston University.

“I was miserable there,” he told the Globe in 2006. “But it taught me how to write, and it changed my outlook on life by making me aware of what the upper class — the aristocracy, and there is one — is about, and I am not intimidated by that now.”

He graduated from Boston University with a bachelor’s degree in government, and from Boston University School of Law.

After working for a summer in Washington, D.C., with consumer advocate Ralph Nader, Judge Houston returned to Boston to direct the juvenile justice project at what is now Massachusetts Advocates for Children. Dukakis appointed him to serve on the Roxbury District Court bench, securing Judge Houston’s Executive Council confirmation on the final day of his first term as governor.

In the 1990s, Dukakis appointed him to the Superior Court bench, where Judge Houston served until retiring in 2006.

Judge Houston and Susan Levine met at Boston University and married in 1971.

“The private man loved music, was a deep reader of fiction, and in later life took his hand to short stories and published the novel ‘New Boy,’” she said.

His affection for music included working with the Boston Symphony Orchestra to create a program that brought musicians to Boston public schools and, in turn, sent students to the orchestra’s Youth Concerts.

Susan added that her husband was a mentor to many, “a talented cook, and a wonderful husband and father.”

In addition to his wife, Judge Houston leaves a son, Daniel; a

daughter, Elisabeth; and a grandson.

A gathering to celebrate Judge Houston’s life and work will be announced.

Reflecting on his work beyond the demands of hearing cases and presiding over trials, Judge Houston said in a 1999 interview with Bostonia, Boston University’s alumni magazine, that he was “a different sort of judicial activist” who tried to find innovative ways to address society’s problems.

“I think I am atypical, and maybe even considered a judicial Don Quixote,” he told Bostonia. “Judges are not expected to do the kinds of things that I do.”

Carroll, who delivered the eulogy at a graveside burial service, recalled in a phone interview that he would occasionally drop by to sit in the back of courtrooms where Judge Houston presided, just to see his friend at work.

“I was edified by what I saw, by the way he administered justice with compassion and clarity,” Carroll said. “He never forgot that the people in front of him were human beings, no matter what they were charged with or why they were there.”

Chism hauls in the ‘snag of the year’

By Nicole Yang
GLOBE STAFF

ORCHARD PARK, N.Y. — Efton Chism ran off the field into the bowels of the new Highmark Stadium, pumped his fist, and let out a yell.

“[Expletive] yeah!” the Patriots wide receiver shouted, before hugging coach Mike Vrabel.

“I’m so [expletive] happy for you,” Vrabel said, as he put his arm around Chism and walked towards the visitors’ locker room.

The emotional moment came minutes after Chism reached to haul in a one-handed, game-winning touchdown in the final minutes of Sunday’s divisional matchup against the previously undefeated Bills. On a third down at Buffalo’s 23-yard line, Chism extended his right arm and managed to corral the pass from Drake Maye despite his left arm being tangled with Bills cornerback Davison Igbinosun.

“Snag of the year,” wide receiver Romeo Doubs said.

The remarkable catch, and ensuing 2-point conversion, capped an eight-play, 73-yard drive that put the Patriots ahead, 29-26. Earlier in the possession, Chism also jumped up

MATTHEW J. LEE/GLOBE STAFF

Romeo Doubs caught his first two Patriots touchdowns, including one over Maxwell Hairston in the third quarter.

to come down with a tough 19-yard catch with 2025 first-round draft pick Maxwell Hairston in coverage.

“Nobody blinked when we were over there on the sideline and they scored and went up, 26-21. We just did what we do,” Maye said. “Thankful for those guys stepping up, everyone stepping up. We’ve got different guys in there. We ain’t practicing

some of these plays with [these] guys in there, so it’s cool how this game brings people together.”

Chism is somewhat of an unlikely hero for the offense. Bills safety C.J. Gardner-Johnson didn’t even know he was on the Patriots’ 53-man roster.

“A practice-squad made a hell of a play,” Gardner-Johnson said

PATRIOTS, Page C6

CHAD FINN

Maye felt team had his back

ORCHARD PARK, N.Y. — It is possible, I suppose, to exaggerate how much was at stake when the Patriots got the ball back with 4:27 left, situated at their own 27-yard line and suddenly trailing the Bills, 26-21.

But not by much.

The Bills’ action figure of a quarterback, Josh Allen, had just led a lightning strike of a drive — five plays, 80 yards, in just 2:09, culminating with a sizzling 34-yard touchdown pass to Keon Coleman.

The raucous crowd at brand-new Highmark Stadium seemed assured Allen’s familiar football heroics had secured the Bills’ fourth win in as many games this season.

After all, while his Patriots counterpart Drake Maye had played his best game of the season, the third-year quarterback has been bizarrely error-prone, starting with a season-opening loss to the Seahawks in which he threw three interceptions in the fourth quarter.

When the Patriots got the ball back at their own 27 with just that 4:27 remaining, there were primary potential outcomes in a game that they *had* to have, lest they fall three games back of the Bills four weeks into the season:

The offense could sputter out or turn the ball

ON FOOTBALL

Win is a great reflection on coaching staff

In the short-term, the Patriots basically saved their season with Sunday’s 29-26 win at Buffalo. It’s only Week 4, but a loss would have put them three games behind the Bills in the AFC East race. Instead, they’re 2-2 and one back of the 3-1 Bills, with three months of football still ahead. They still can accomplish their three goals — win the division, host playoff games, and compete for championships.

“It gets us back in the race,” coach Mike Vrabel said. “We’re lucky to get out of here with a win, but it does get us back in the race.”

But Sunday’s win meant much more for the Patriots in the big picture. After three shaky weeks, they showed fight. They showed that their young quarterback isn’t broken. That they can block out the noise. That their culture is still alive and well.

Add it all up, and it points in one direction — the Patriots still believe in their coach, and Vrabel can deliver when needed.

“It just gives us some confidence to show us we could do this. We can play with anybody,” running back Rhamondre Stevenson said.

It has been a rough 2026 for Vrabel ever since getting crushed in the Super Bowl. The Dianna Russini episode sapped some of his swagger and

Clock mishap put Bruins off stride

Jets scored with timer off Friday

By Jim McBride
GLOBE STAFF

It was as if time stood still at Canada Life Centre late in the second period Friday night.

That’s when the clock malfunctioned in Winnipeg’s home opener, leaving the Jets and Bruins guessing about how much time was left. During every stoppage in play, the public address announcer would bellow out the time remaining, but it was muddled at best. Sounded like Char-

lie Brown’s teacher was behind the mic.

It was disconcerting for all involved — coaches, players, and fans. Without the benefit of a working clock, managing the game, including timing shifts for lines and pairs, gets tricky.

The Jets eventually scored to take the lead on Mario Ferraro’s goal with 8 seconds left in the period — though very few knew exactly how much time was remaining.

“I hate excuses, but yes, [it made it] a little bit difficult,” said Marco Sturm, who had to

Finding points after Tatum is a priority

GARY WASHBURN
ON BASKETBALL

CHARLESTON, S.C. — The primary goal of this Celtics training camp, which shifts to The Citadel this week, is finding secondary scorers to support Jayson Tatum.

The loss of Jaylen Brown means the Celtics move forward without their most reliable scorer last season. That void could be filled by committee, but that depends on the trio of players expected to help Tatum being healthy and consistent.

Derrick White is coming off a difficult offensive season, shooting a career-low 39.4 percent from the field and 32.7 percent from the 3-point line, his lowest since his first season in Boston.

White is a sparkling defender, earning first-team All-Defense for the first time and while shouldering the responsibility of guarding the opposing team's best wing player. He also facilitated the offense, feeding Tatum and Brown the ball in their preferred spots. Perhaps the responsibility was too

much, and coach Joe Mazzulla wants to lighten his load by creating a more versatile offense with more ball handlers. The coherent theme of this training camp is increased offensive versatility, which means even the likes of Neemias Queta will be allowed to shoot 3-pointers to create more floor space.

“There’s always downs of the year, so I think every offseason, [I] try to just go back and see what went wrong, why it went wrong, and try to correct it for the next season,” White said. “Obviously, shooting was a big thing and something that I think I corrected, hopefully. I just try to work on other parts of my game that I know [are] going to be important as well. So, like everybody thinks [they] have had a great summer and [are] ready to go, but I’m just, I feel good. I feel confident, and I just got to go out there and perform.”

Using Tatum, Paul George, and Mike Conley as ball handlers can take pressure off White. George has been healthy in training camp; that’s an encouraging sign for the Celtics, who have been heavily criticized for getting the 36-year-old as the only player return for Brown.

MELECK ELDAHSHOURY FOR THE GLOBE

Paul George says he feels healthy for the first time in a while.

George’s health may be the most important factor for a successful season in Boston. If he’s able to defend, make catch-and-shoot threes, and also space the floor for Tatum, the Celtics could contend with the likes of the Knicks and 76ers in the Eastern Conference.

It’s uncertain if the Celtics will limit George’s game schedule, perhaps by sitting him in back-to-backs, to secure his knees. That he’s been thrust into a critical role on a championship contending team is not lost on him. George played only 78 games over the past two years in Philadelphia because of injuries, tanking, and a 25-game

suspension.

“Obviously the most frustrating thing about it is when a player is not healthy, but he tries everything to put it all on the line, and tries to be available for his team, knowing that he’s not fully 100 [percent], and then you know people saying, ‘Oh, he’s not this, he’s not that,’” George said. “Fact of the matter was, I wasn’t healthy. I was trying to play through injuries and be available and give everything that I had to the team when I probably should have took a little more time off to let my body fully heal. And so to hear that, like ‘he’s not capable of this’ or ‘he’s washed,’ it’s funny, but it’s frustrating, just because I’m still capable of doing those things when healthy, and I feel like my body is back healthy.”

Payton Pritchard will definitely get more scoring opportunities this season. Mazzulla will have to determine whether to start the former Sixth Man of the Year and whether to use him in the fourth-quarter lineup.

Pritchard’s numbers were considerably better last season when he came off the bench. He was a reserve in 24 of 26 games after the All-Star Break and

shot 42.2 percent from the 3-point line in that span. Defenses began reacting differently to Pritchard as his offensive prowess increased. That should again be the case, especially without Brown.

The club has full confidence Pritchard will take the next step. His scoring average increased the past four seasons and he has spent the past few weeks picking up tips from the 38-year-old Conley, who has become a mentor.

The Celtics felt their offense had become stagnant and predictable, especially in the final minutes of games. The presence of George, White, and Pritchard — their 3-point shooting prowess — along with Tatum could make them difficult to guard.

Mazzulla will spend the preseason experimenting with various combinations and rotations. It will be interesting to see how Tatum’s supporting cast meshes in a revamped offense that will emphasize playing at a faster pace.

Romeo Doubs (right) gets a hand up from Eli Raridon after hauling in a 14-yard touchdown catch — his first of two Sunday — on the opening drive in a 29-26 win over the Bills.

Maye goes through the ups and downs, all in one game

►FINN
Continued from Page C1

over. Or Maye could find his 2025 mojo in the moment his team needed him the most, and lead them to a winning touchdown drive.

To the shock and chagrin of Bills fans — and admit it, maybe a few Patriots fans, too, whose patience with quarterbacks may be permanently skewed by the 20-season Tom Brady experience — Maye and the offense traveled the latter path, the one to about as critical a win as a football team can have a month into the schedule.

With 1:55 remaining, Maye rolled right on third and 5 from the Bills 23 and lofted a pass to the right corner of the end zone.

It's the kind of throw that has been a problem this season, but Maye put it

in a perfect spot, and second-year receiver Efton Chism hauled it in with one hand — the most spectacular Patriots play of the day in the most crucial situation.

When safety Craig Woodson intercepted Allen with 65 ticks left, the Patriots effectively had a win few thought they would get. At least few outside of their own locker room.

"I've got full trust in myself," said Maye after completing 22 of 37 passes for 269 yards and three touchdowns, with one interception. "And I do think the amount of times that teammates came and pumped me up this week was cool. It's what makes this game so special. There are a lot of guys in that locker room that love each other and love playing for coach Vrabel."

Maye's other touchdown passes

were hauled in by Romeo Doubs (six catches, 58 yards, and the two scores, including a 2-yarder that gave the Patriots a 21-17 lead midway through the third quarter), who chuckled when asked if he thought Chism had caught the winning touchdown.

"I always get nervous [waiting for a catch to be confirmed]," he said. "I'm kind of like the nervous mom sending their kid off to school for the first time, when you catch and they signal, and it looks a little close, I'm always a little nervous. Once [Chism] started celebrating, once they celebrate pretty good, it tells the story, so that was a special moment."

Maye set the Patriots on a good course on their first possession, completing 6 of 7 passes on a 12-play, 97-yard drive punctuated with Doubs's first touchdown catch, from 14 yards

out. It was their most impressive drive until their final one, and there was a smattering of mistakes in between, including an interception near the end of the second quarter that gifted the Bills a field goal.

It was a reminder that even the best quarterbacks' performance during a game isn't always linear. There are ups and downs, just as there are in a macro sense over the course of a player's career. Many, if not most, of the greatest quarterbacks in NFL history struggled in their early seasons. Peyton Manning, Troy Aikman, and Terry Bradshaw were overwhelmed. Brett Favre and Steve Young got traded. Roger Staubach had to share the job with Craig Morton once upon a time. Kurt Warner stocked shelves.

Maye's success in his first full season as a starter — when he threw 31

touchdown passes and just eight interceptions, led the Patriots to the Super Bowl, and finished runner-up for MVP — is an outlier. That near-immediate success has already made his path unusual.

It made many of us forget that there will be ebbs and flows for the 24-year-old, something his coach seems to recognize.

"I'm happy for him, I'm proud of him, and he deserves all the credit," said Mike Vrabel. "For however things have been, the only thing that matters is what we're going to do with the next opportunity we get. And sometimes that's hard for everyone to understand, but I think he really took that to heart."

Victory over Bills a positive reflection on coaching staff

►ON FOOTBALL
Continued from Page C1

was the first ding against his leadership since taking the job over a year ago. The 1-2 start made the situation worse, with Vrabel's young quarterback looking broken, and the Patriots looking like a shell of last year's team. The season could have spiraled quickly out of control with a loss on Sunday.

But if last week's 35-6 loss at Jacksonville was a reflection of Vrabel and the coaches, so was Sunday's response in Buffalo. The coaches earned straight A's — for preparation, leadership, and delivering in the clutch.

The defense under coordinator Zak Kuhr was mostly terrific despite playing without two of its top players, Christian Gonzalez and Christian Barmore. Dalton Kincaid, the NFL's leading tight end entering the game with 263 yards and more than 18 yards per catch, had just one catch for 7. Running back James Cook did nothing through the first three quarters. Josh Allen rushed for only 4 yards on five carries, sealed the loss with a head-scratching interception, and went 2 for 4 in the red zone. That was a direct challenge that the Patriots answered after allowing the Jaguars to go 5 for 5 last week.

"Extremely proud of the defensive staff, but most importantly the players," Vrabel said. "I think the ability to stop the run early on,

to get some turnovers, ultimately gave us some hope."

The offense certainly wasn't flawless, particularly with the two costly giveaways in the second quarter. But it made big statements — first with a 97-yard touchdown drive to open the game, then with a 73-yard drive in the fourth quarter with the game on the line. Playing in a hostile stadium against their archrivals, the Patriots proved that they can deliver.

They gained 405 yards despite again playing without A.J. Brown, and losing Mack Hollins mid-game to injury. Romeo Doubs stepped up with his first two touchdown catches as a Patriot, and little-used Efton Chism made a name for himself with a highlight-reel, one-handed catch for the winning score. The Patriots went right after the Bills' secondary, which was playing without No. 1 cornerback Christian Benford.

The offense answered Vrabel's challenges, twice converting fourth downs when the Patriots easily could have kicked a field goal. Both conversions led to touchdowns.

"If you play Josh Allen, you're going to have to be aggressive," Vrabel said. "And our guys rewarded us by converting."

Most important, Maye and the Patriots proved that they can figure it out. A headcase over the first three games who cost his

team with inexplicable interceptions, Maye slowly gained confidence throughout Sunday's affair before finally morphing into the 2025, MVP-runner-up version of himself on the game-winning drive. It wasn't all perfect — particularly the poor ball security on his fumble in the first half — but Maye made big plays with his feet, and confidently pushed the ball downfield again, finishing with 269 passing yards, 54 rushing yards, and three passing touchdowns.

Most poignantly, Sunday's win proved that the culture Vrabel built with last year's Super Bowl team is still alive and well. Maye said the number of times his teammates pumped him up last week "was cool to see and what makes this game so special." The players had bear hugs for Vrabel entering the postgame locker room, with some chanting, "We ain't dead!"

Down in the fourth quarter, their season practically on the line, the Patriots came together and delivered.

"Nobody blinked when we were over there on the sideline and they scored and went up, 26-21," Maye said. "Coach always says, 'Don't ride the roller coaster.' And that's what we're going to buy into, and know we got a lot of work left to do."

Referee Bill Vinovich (left) said that language Mike Vrabel (right) used makes a penalty “pretty much a given.”

Unsportsmanlike flag explained

Vrabel: Comment was ‘nothing derogatory’

By Nicole Yang
GLOBE STAFF

ORCHARD PARK, N.Y. — Referee Bill Vinovich said he flagged coach Mike Vrabel for unsportsmanlike conduct in the second quarter of Sunday’s Patriots-Bills game because of a comment made following a penalty against cornerback Marcus Jones. “He was out of the [coach’s] box, came up to the official, and said, ‘That was a [expletive] terrible call,’” Vinovich said in a pool report following New England’s 29-26 victory.

On a Bills’ third and goal at New England’s 16-yard line, Josh Allen threw an incomplete pass. But officials flagged Jones for defensive holding, giving the Bills 5 yards and a fresh set of downs. Vrabel, from the sideline, yelled, drawing his own foul. The Bills ended up scoring three plays later to tie the score, 14-14. “I’ve said that 87 times,” Vrabel said after the game. “It was nothing derogatory. You’d have to ask him. I think he was a little sensitive. “Once I get the word from upstairs that it wasn’t, what we felt like, a good call, which I’m going to trust [vice president of football operations and strategy John Streicher] with

my life — I probably shouldn’t have swore, but I can tell you that in my history of being on the sidelines as a head coach, I’ve said that.” Vrabel said he apologized for the remark. Asked if Vrabel received a warning for his language prior to the penalty, Vinovich said no. “I don’t know how you’re going to give a warning,” Vinovich said. “It’s not something that is going to happen twice. When you use language like that, it’s pretty much a given.”

The extra hours pay dividends for Chism

►PATRIOTS
Continued from Page C1
after the game. “We probably won’t hear from him again. Respectfully. I say that with a lot of confidence.” After going undrafted in 2025, Chism spent most of his rookie year as a healthy scratch, appearing in only eight games and catching three balls for 75 yards. This year, he was inactive for the season opener, but earned playing time following the injury to star wideout A.J. Brown. His offensive role remained limited, with just two catches for minus-1 yard headed into Sunday. Chism revealed he wasn’t even on the field during practice this week when the offense was running through the play that ended up being his game-winning touchdown. After Mack Hollins exited Sunday’s game with a calf injury, Chism’s snaps increased — and he trusted the extra hours he’s logged with Maye and wide receivers coach Todd Downing. “Nobody’s going to work harder than Chiz,” Vrabel said. “I mean, Chiz is literally

in Todd Downing’s office before 6 o’clock every morning, if not 5:30, getting the game plan down to know every position. He’s an extremely hard worker, with his toughness, his routine. It’s really cool to see guys like that take advantage of their opportunities. Obviously, stepping up in a critical situation is what this league is about.” There could still be a point this season when Chism returns to being one of the team’s inactive players, especially once Brown is able to return. But he undoubtedly stepped up on Sunday, delivering when it mattered most. “Obviously, we all want to be active,” Chism said. “We all want to play. That’s a lifelong dream and goal to play in the NFL. When you get to that moment and sometimes you don’t get to play, it sucks. But you just have to continue to stay patient and don’t live in tomorrow or yesterday.” The receiver depth chart will be sorted out in due time. Brown isn’t eligible to return after Week 5. The severity of Hollins’s injury is unknown. For now, though, Chism, the unheralded 5-foot-10-inch receiver out of Eastern Washington, deservedly gets his

shine. Chism’s play also punctuated an important win for the Patriots. After an ugly showing against the Jaguars in Week 3, and questions about Maye and the effectiveness of the offense, the team responded well against a divisional opponent to even its record at 2-2. “It gets us back in the race,” Vrabel said. “We knew it was going to be a battle.” Up next for the Patriots will be a feisty Raiders team, led by new coach Klint Kubiak, next Sunday at Gillette Stadium. As the Patriots continue to navigate its growing list of injuries, as well as the challenges of coming off a Super Bowl appearance, Chism encapsulates the type of effort they need. “Everyone has to believe they’re going to be the answer as to why we get back into this thing,” Vrabel said. “Not a lot of people probably thought I would be here,” Chism said. “And now I’m here.”

Christian Ellis and the Patriots were successful limiting Josh Allen, who only rushed for 4 yards and threw a late pick.

Winston, Giants bounce Cardinals

ASSOCIATED PRESS
Giants 36
Cardinals 24
EAST RUTHERFORD, N.J. — Jameis Winston threw three touchdown passes to offset a pair of interceptions, Deonte Banks had a 98-yard pick-6 in the final seconds, and the Giants won another not-so-pretty game, defeating the Cardinals, 36-24, on Sunday.

Making his second start in place of injured franchise quarterback Jaxson Dart, Winston again did what he needed to do to engineer a victory with TD passes to Malachi Fields, Malik Nabers, and Theo Johnson. Winston’s 12-yard toss to Fields with 4:30 remaining in the second quarter was the team’s first touchdown since the season opener, ending a drought that lasted nine-plus quarters. Winston finished 18 of 29 for 250 yards in a roller coaster showing of highs and lows. J.J. McCarthy was in uniform six days after the Giants (3-1) acquired him in a trade with Minnesota but did not play. Nabers more than doubled his receiving yardage this season by making six catches for 112 yards. He had 96 through his first three games back from a serious knee injury. The defense also made some big plays, sacking Jacoby Brissett twice and rebounding from

allowing two long touchdown drives in the first 10 minutes. For a second game in a row, New York got an interception after its opponent reached the red zone, and Banks made up for his pass interference penalty a few plays earlier. Dominic Zvada continued to validate coach John Harbaugh’s trust in another rookie kicker by improving to 9 of 9 on field goal attempts. Brissett was 21 of 35 and threw three interceptions — the last coming on the final play — which turned out to be the difference. Arizona (1-3) blew a 14-3 lead after Brissett connected with Marvin Harrison Jr. for a TD and Tyler Allgeier ran for a touchdown in the first quarter. The Cardinals gained just 138 yards the rest of the way, losing their third in a row since winning coach Mike LaFleur’s debut in Week 1 at the Chargers. Rookie linebacker Arvell Reese picked off Brissett for his first interception in the NFL as part of a dominant performance that included nine tackles. And the No. 5 pick in the draft did so with Hall of Famer Lawrence Taylor in attendance as part of the 40th anniversary celebration of the 1986 Super Bowl championship team at halftime. “He has been great,” Taylor said. “I think he’s a good player.”

ASHLEY LANDIS/ASSOCIATED PRESS

CeeDee Lamb caught a 12-yard TD pass with 40 seconds left in the fourth quarter to lift the Cowboys past the Texans.

Lamb has a career day for Cowboys

ASSOCIATED PRESS
Cowboys 34
Texans 30
HOUSTON — CeeDee Lamb shined in his first NFL game in the city he considers his second home to carry the Cowboys to a victory on Sunday.

Lamb had a career-high 17 catches for 189 yards and his 12-yard touchdown reception with 40 seconds left lifted Dallas to a 34-30 win over Houston to keep the Texans winless. “I knew this one was a big one for him,” coach Brian Schottenheimer said. “I know how much Houston means to him and his family means to him. And he put on a show.” Lamb was born in Louisiana and lived in New Orleans until relocating to the Houston area after the city was destroyed by Hurricane Katrina in 2005. “My grandma came out here, which was really good to see,” Lamb said. “She doesn’t really come to many of my games and do all the hoorah and screaming. It was good to see my family here. It’s just been a long road to end up in this situation and I’m grateful for it.” Javonte Williams ran for a career-high three touchdowns — all in the second half — to help the Cowboys to the victory. Dallas (2-2) trailed by 4 after a 6-yard touchdown run by Woody Marks with about 2½ minutes to play. The Texans were facing third and 14 when a hook-and-ladder play with a 2-yard catch by Dalton Schultz and

a 19-yard run by David Montgomery set up that score. Dak Prescott then orchestrated an 11-play, 74-yard drive that included a fourth-down conversion and capped it with the throw to Lamb to give the Cowboys the victory. “As soon as it was called,” Prescott said, “I knew it was a touchdown.” The Texans (0-4) had a last chance after that, but C.J. Stroud’s desperation pass fell incomplete. “Our guys moved the ball really well,” coach DeMeco Ryans said. “We just did not play well enough defensively and it’s really a bad feeling.” Prescott threw for 335 yards and Stroud had 347 yards passing. Nico Collins had seven receptions for 118 yards and two touchdowns in his return after missing two games with a hamstring injury. But his big day wasn’t enough to get the Texans in the win column. “It’s tough,” Collins said. “We’re 0-4 right now. You’ve got to move forward. Go to the next week, man. You can’t look back on this.” The Cowboys took their first lead on the third score by Williams, a 2-yard run that made it 27-23 with about 11 minutes to go. Dallas cut the lead to 16-13 on an 8-yard run by Williams on the opening drive of the third quarter. A 30-yard reception by Lamb set up the score.

Williams, Stafford spark late rally

ASSOCIATED PRESS

Rams 24 PHILADELPHIA — Kyren Williams ran for two touchdowns in the final four minutes as Matthew Stafford and the Rams rallied from a 10-point deficit to beat the Eagles, 24-20, on Sunday.

The Rams (2-2) had struggled offensively all afternoon and a win seemed out of reach until late in the fourth quarter, when Eagles coach Nick Sirianni decided against kicking a chip-shot field goal that would have made it a three-score game and instead went for it on fourth down.

The Eagles (2-2) failed to convert, giving the Rams new life.

Stafford and the Rams were aided by an unnecessary roughness penalty that helped them cap a 98-yard drive on Williams's 1-yard TD run with 3:59 left that made it 20-17.

The Eagles — who failed to convert a single third down on 12 tries — punted to set up Stafford for the winning drive. He connected with Puka Nacua three times and had a clutch 8-yard scramble

on the 10-play, 79-yard march, and Williams finished it off when he broke a few tackles for a 7-yard touchdown with 1:10 remaining.

The Rams have seen their share of blown late leads of late under coach Sean McVay and Sirianni was 4-0 lifetime against his coaching counterpart.

Just don't call this one an upset. Sportsbooks had installed the Rams as road favorites.

Jalen Hurts was sacked twice on Philadelphia's final possession and had a desperation pass knocked down. He threw two touchdown passes to Darius Cooper in the first half but finished just 12 of 27 for 93 yards.

Stafford was 32 of 51 for 317 yards and two interceptions. His picks led to 10 Eagles points in the first half and Philadelphia led, 20-10, at halftime.

The Eagles entered with a depleted roster that had them down six starters. That number increased to 10 as star running back Saquon Barkley was among the Eagles who got hurt as the team prepares for a trip to London next week.

JEFF LEWIS/ASSOCIATED PRESS

Patrick Mahomes passed for 225 yards and two touchdowns in Sunday's win.

NOTEBOOK

Mahomes, Chiefs top surprising Raiders

ASSOCIATED PRESS

Patrick Mahomes moved to 7-0 at Allegiant Stadium in Las Vegas, including one of his Super Bowl victories, and **Kenneth Walker III** rushed for 177 yards and two TDs to lead the Chiefs to a 30-27 victory over the Raiders in what was a surprise battle of AFC West unbeatens.

Walker's 2-yard touchdown run with 3:21 left put the Chiefs (4-0) ahead for good at 23-19. It was set up by former Patriot **Tyquan Thornton's** 55-yard reception on the previous play. Thornton, who had five catches for 111 yards and two touchdowns, suffered a gruesome-looking dislocated left ankle on the play and was carted off.

Kirk Cousins passed for 365 yards and two touchdowns for the Raiders (3-1), ending his seven-game winning streak that included the final four games last season with Atlanta.

Jackson leaves in boot

Lamar Jackson's ankle appeared to roll under a defender on a sack in the final seconds of the second quarter in Baltimore, and although the Ravens (3-1) held on for a 24-18 win over the Titans (0-4), they didn't score in the second half as **Tyler Huntley** finished the game.

Jackson, a two-time MVP quarterback, watched the second half from the sideline. He left in a protective boot according to reports.

"He was just dealing with a little bit of an ankle," Ravens coach **Jesse Minter** said. "We'll have to see where that's at."

Jackson threw for 222 yards and two touchdowns before leaving the game, and **Derrick Henry** scored against his former team. **Zay Flowers** had eight catches for 118 yards and a TD.

Jets lose, but get their pick

Kyle Monangai rushed for 146 yards and two touchdowns, and the host Bears stuffed the Jets, 23-12, holding New York to seven first downs and 157 yards overall as quarterback **Caleb Williams** missed his second straight game for Chicago because of a right hamstring injury.

Even the end of their NFL-record interception drought at 20 games came with a caveat for the Jets (1-3). **Minkah Fitzpatrick** stepped in front of **Colston**

Loveland and picked off a pass by **Tyson Bagent** in the second quarter, but New York had three more interceptions taken off the board because of three of their 12 penalties in the game.

Young, McMillan rack it up

Bryce Young completed 29 of 41 passes for 329 yards and two touchdowns to **Tetairoa McMillan**, who had 14 catches for a career-high 192 yards, and the Panthers overcame an injury-filled week to beat the Lions, 32-26, in Charlotte, N.C.

Chuba Hubbard ran 20 times for a season-high 122 yards and two touchdowns as the Panthers (2-2) scored on six straight possessions after punting on their opening drive.

The Lions (2-2) had a chance to win the game on their final drive, which started at their own 13 with 2:12 remaining, but **Jared Goff** couldn't pick up a first down.

An official investigation

The NFL is looking into the circumstances of line judge **Jeff Seeman** swearing at Cardinals tight end **Trey McBride** during the team's loss to the Giants, a league spokesperson told The Associated Press. The exchange with just under five minutes remaining was caught on camera. . . Bengals All-Pro wide receiver **Ja'Marr Chase** left Cincinnati's 22-17 loss to the visiting Jaguars (3-1) because of a concussion after taking a hard hit during the second quarter. **Joe Burrow** passed for 428 yards for the Bengals (2-2), but also had two interceptions as **Trevor Lawrence** beat Cincinnati — the last AFC team he hadn't . . . **Emanuel Wilson** caught a touchdown pass and ran for another score and the Seahawks (3-1) handed the Chargers a fourth straight loss to start the season, 30-23 . . . **Brock Purdy** threw two touchdown passes and **Christian McCaffrey** ran for a score to lead the undefeated 49ers (4-0) to a 24-14 victory over the Broncos (2-2) . . . Undrafted rookie **Jalon Daniels** threw two picks that led to 10 points in his first career start filling in for **Baker Mayfield**, and the Packers (2-2) overcame two fourth-quarter turnovers to beat Daniels's Buccaneers (0-4), 17-14.

Monday night football

Atlanta at New Orleans

Time: Monday, 8:15 p.m., ESPN. **Line (over/under):** New Orleans by 1½ (45½). **Records:** Falcons 1-2 (1-2 vs. spread), Saints 1-2 (2-1 vs. spread). **Key injuries:** ATLANTA: QUESTIONABLE: LB Divine Deablo (hamstring), DE Samson Ebukaem (hamstring). NEW ORLEANS: OUT: LB Kaden Ellifis (caif), EDGE Carl Granderson (ankle), EDGE Anfernee Jennings (knee). QUESTIONABLE: LB Pete Werner (stinger), TE Noah Fant (abdominal).

Chase Briscoe moved up to sixth in the Chase standings after earning his first career Cup Series victory in Las Vegas.

NASCAR

Briscoe sweeps all stages in Las Vegas

By Kirk Kern
ASSOCIATED PRESS

LAS VEGAS — Chase Briscoe held off a last-lap charge from points leader Kyle Larson to win the NASCAR Cup Series race on Sunday at Las Vegas Motor Speedway.

Briscoe swept all three stages on the 1.5-mile track to earn maximum playoff points. Larson lost control on the final stretch and collided with Tyler Reddick, who slid into the infield but still recovered to finish third.

It was Briscoe's first career Cup Series victory in Las Vegas, where he led a race-high 175 laps. Briscoe also moved up to sixth in The Chase standings.

Denny Hamlin, who entered second in the playoff standings, finished 16th and was shut out of stage points.

Briscoe drove back from third place to pass Austin Cindric late in the second stage for the win. Cindric finished second in the stage, followed by Christopher Bell in third.

Larson salvaged a stage point

by finishing 10th, while Hamlin was shut out of stage points in 14th.

Briscoe won the opening stage ahead of Bell and Ryan Blaney. Briscoe elected not to pit for tires during a late green-flag pit cycle, holding off the field on the restart to secure the stage victory.

Hamlin led the first 39 laps and was running third when he spun three laps before the end of the stage. Although he avoided major damage and continued, the lack of a caution flag caused him to fall back to 28th at the stage break. Hamlin set the fastest lap of the stage at 29.572 seconds on the third lap.

Larson, who started sixth, endured a 26-second green-flag pit stop while his pit crew made rear suspension adjustments. After dropping to 32nd place, he worked his way back to 24th by the end of the stage.

Though he briefly fell off the lead lap, Larson regained it on lap 45 when a caution flew for a Zane Smith spin.

SportsLog

Florida falls out of Top 10 after big loss to Missouri

Florida's stint in the top 10 of the AP Top 25 rankings proved short-lived. The Gators fell in the rankings on Sunday after losing in a rout to Missouri. The Tigers climbed 11 spots to No. 14 and jumped over the Gators in the process. Florida dropped eight spots to No. 16. Florida's fall made room for a light shuffle in the top 10: No. 6 Alabama and No. 7 Indiana traded rankings, BYU moved up two rungs to No. 8, Mississippi remained No. 9, and LSU climbed one spot to No. 10. Texas goes into this coming Saturday's Red River Rivalry game against Oklahoma as the No. 1 team for the fourth straight week. The rest of the top five stood pat, with Georgia remaining No. 2, followed by Notre Dame, Miami, and Ohio State.

W N B A

Canada leads Dream past Liberty

Jordin Canada scored 20 of her 25 points in the second half and had five steals to help the Atlanta Dream beat the New York Liberty, 92-82, in Game 1 of their best-of-five WNBA semifinals series. DeWanna Bonner added 23 points and helped fill the void when Allisha Gray went down with a left hand injury in the second quarter.

Williams powers Valkyries in Game 1

Gabby Williams had 25 points, 11 rebounds, and 5 assists, Kiah Stokes added 14 rebounds and three blocked shots, and the Golden State Valkyries took Game 1 of the WNBA semifinals by beating the defending champion Las Vegas Aces, 71-60. A'ja Wilson scored 24 points while Chelsea Gray contributed 16 points for Las Vegas, which lost guard Jewell Loyd to a left leg injury early in the third quarter, and was held to its lowest point total of the season.

H O C K E Y

Marchand returns, scores for Panthers

Brad Marchand made his season debut Sunday night and scored, though his Panthers lost, 3-2, to the host Anaheim Ducks in overtime. The 38-year-old longtime Bruin hadn't played since March 6, when the team shut him down with a lower-body injury. Marchand announced in August that the unspecified injury required a last-minute surgery after a fix without didn't work, and he had been expected to miss most of October to rehab.

S O C C E R

Ramos leads Portugal without Ronaldo

Gonalo Ramos fired Portugal to a 2-1 win over Norway to keep the Portuguese perfect in Group A4 with four wins from four games. Ronaldo was involved in Portugal's opening Nations League game, where he was replaced by Ramos in a 1-0 win over Wales, and hasn't played since . . . Greece, which celebrated its first win over Germany last week, held Jrgen Klopp's team to a scoreless draw in Thessaloniki. Of Klopp's four games in charge, Germany has only won one.

M I S C E L L A N Y

Sabalenka knocked out of China Open

Second-ranked Aryna Sabalenka was bundled out in the third round of the China Open in straight sets by Czechia's Nikola Pietrangeli. In the men's quarterfinals, Novak Djokovic maintained his perfect record at the tournament with a 4-6, 6-4, 6-4 victory over US Open champion Alexander Zverev. Bartunkova defeated the four-time Grand Slam champion 6-4, 6-3 in just over an hour and a half, leaving the tournament without its two top seeds in the first week. Newly crowned world No. 1 Elena Rybakina was ousted Saturday . . . Austin Smotherman recovered from his lone blunder with two great shots and was able to cruise home to win the Bank of Utah Championship, his first PGA Tour victory in his 100th career start.

HIGH SCHOOL FOOTBALL NOTEBOOK

Risk pays off for Chelmsford

By Nate Weitzer
GLOBE CORRESPONDENT

At the start of Tuesday's gym class, Chelmsford's senior football players found a football in the equipment closet and started experimenting.

Quarterback Skyler DeJesus, the long snapper last season and for the first three weeks this fall, asked receiver Dillan Quinn if he could snap a long pass to him. When Quinn delivered an arcing snap on the money across the gym, special teams coordinator and physical education teacher Michael Marshall perked up.

That afternoon in practice, Quinn, an outfielder for the baseball team, started long-snapping to DeJesus, who practiced his punting, and the new configuration was in place for Friday's Merrimack Valley Conference matchup at Tewksbury.

Flexibility proved pivotal in Chelmsford's 28-21 win at Doucette Stadium. DeJesus rolled out to punt on fourth and 15 in the final minutes of the second quarter and decided to run in a gamble that stressed Chelmsford coach George Peterson, but paid off with a 65-yard touchdown to give the Lions momentum before halftime.

"I just kind of blacked out and went on instinct," DeJesus said. "I'm a pretty adaptable guy and I want to do whatever I can to help my team win. If that means playing quarterback and helping on offense, or on special teams, I'll do that."

Instead of handing the ball to Tewksbury in their own end of the field with a 14-7 lead, the Lions took a 21-7 lead and tacked on another score to start the third quarter when Nolan Smith caught a 60-yard pass to set up Colin Veo's second rushing score of the evening.

DeJesus played offensive line at the youth level and was a tailback and slot receiver last season. Now in his first full year playing quarterback, he delivered big plays on time, including a 56-yard touchdown to Quinn in the second quarter.

"Me and [DeJesus] have been playing together since middle school and we've built confidence, so plays like that just kind of come naturally," Quinn said.

After holding off a late Tewksbury rally to become the first visiting team to win at

Doucette in two years, senior captain Alex Glennie lay down on the turf, exhausted from playing every snap. Glennie came up with a forced fumble and recovery in the fourth quarter to deny Tewksbury the opportunity to tie the game.

As the left guard on the punt team, Glennie said he kept looking up for the ball when DeJesus was supposed to punt in the second quarter, and by the time he looked downfield and saw no one to block, he realized his quarterback had a good chance to score.

"Goes to show it's about the Jimmies and Joes sometimes, not the Xs and Os," said Peterson. "Good players can make a coach look good sometimes."

"Coach didn't want me to run on those rollouts, but any open space, I told him, 'If I see any open space I'm going to take off,'" said DeJesus.

"He told me, 'Don't do that. Know the down and distance. Use your brain.' He wasn't happy when I took off, but he was happy in the end."

Coyne stands among Marblehead's best

►COYNE
Continued from Page C1

tributes have washed over the North Shore. National Grand Bank put its flag at half-staff. Dozens of meals and gifts of staggering kindness have come the family's way. Before last week's storm, someone hauled out their 24-foot Key West sport cruiser (Coyne Collection) and had it shrink-wrapped.

Hundreds of Marblehead students and families, plus athletes from Salem, Lynn, Swampscott, Danvers, and elsewhere, have been flocking to Marblehead Sport Shop to grab free T-shirts with Coyne's football jersey number — 18 — in red and black. Store owner Jason Grazado had given away 600 of them by the close of business Saturday. He has no plans to stop making them.

"Owen meant so much to his peers and community," Grazado said.

Coyne was captain of the Marblehead High football team, a wide receiver and safety. He was such a natural leader that when MHS teachers went on strike in 2024, Coyne was asked to help run football practices. His parents didn't know that until a teammate mentioned it.

"He was like, 'Oh, I actually forgot about that story,'" said his father, Brian, an engineer and former hockey player at Tufts, where he met Angela, now a communications professor at Stonehill. They have three younger children, Grady, 15, Landon, 12, and 8-year-old Ella.

Owen was a state-level track competitor in sprints and high jump — in both pursuits, top-10 in school history, according to coach Nolan Raimo.

"He was an unbelievable athlete, but you wanted to root for him, because he tried so hard and did everything right," Raimo said. "He took full advantage of his gifts."

In baseball, he used that speed in center field, and was a closer on the mound. He first dunked a basketball in eighth grade. He "created safe spaces" wherever he went, Raimo said. He was involved in Marblehead's student-run chapter of Best Buddies.

"He was this presence of comfort and safety and courage," said Max Kane, a classmate and close friend. "He literally had no ego. He made you want to be a better person just by being himself."

He was close to his fellow athletes, but three of his best friends were a budding filmmaker, a photographer, and a politician.

"He liked seeing someone's play or helping a friend shoot a movie just as much as his friends loved sitting in the stands for him on a Friday night," Angela said, sitting next to Brian in their living room. They live in Clifton, in a home they bought as a fixer-upper when Owen was 2.

Behind them was a makeshift memorial. His letterman jacket, with a gold "CAPT." pin. A charcoal gray Marblehead football jersey. No. 18. A red Magicians baseball button-up. A hand-drawn placard with the nickname, "OC," the fans chanted during

MATT PORTER/GLOBE STAFF

Brian Coyne and Angela Paradise hold Owen's favorite football photo of himself.

games. So many photos.

They held a framed action shot of Owen, holding a football, arms spread wide and feet above the turf, seemingly floating toward the end zone. It was his favorite one, though you wouldn't have known it.

"He was a different kind of teenager," Angela said. "One that didn't care about clicks, didn't care about likes, didn't give too much thought to social media, didn't care about posturing or posting or any of that stuff."

Schoolwork and chores were never an issue. He preferred quality time with his pals to keg parties. He loved doing cannonballs at the pool at Corinthian Yacht Club, and even though he didn't come from a sailing family, he became a trusted skipper. He taught sailing for the town the last three summers.

Arriving for a soccer game earlier that afternoon at Marblehead High's Piper Field, Mary Kim Koch wore a No. 18 shirt in honor of the boy who taught her how to steer a Sunfish.

"He made everyone in the class feel comfortable," Koch said. "I was really impressed with him, as a young man being able to engage with adults in that way."

Coyne's senior year was off to a fantastic start.

While shining on the field, he was maintaining a 4.0 GPA in advanced placement and honors courses. He made his college decision: he would play football at Williams, the elite liberal arts college. He wanted to explore majors, then the world.

"He was having that first month of senior year that parents dream of for their kids," Angela said, "athletically, academically, and socially."

On Sept. 10, he caught Marblehead's first touchdown of the season, against Lynn English. As a safety, he recorded a slew of tackles. His parents felt it was a normal game, health-wise.

The following Friday, the 18th, Coyne awoke with a splitting headache. He had been vomiting. He texted his mom: "My head is killing me. Come here now." At the

Extra points

■ In Sharon, senior quarterback Brady Shuffain and classmate Joseph Seaman toppled multiple program records in a 21-12 win over Nauset.

Shuffain (11-for-19 passing, 231 yards, 3 TDs) set the mark for career passing yards (3,289) and matched the career mark for touchdown passes (28). Seaman (6 catches, 143 yards, 3 TDs) has the career mark for receiving yards (1,431) and touchdowns (15).

This came two weeks after Shuffain, son of coach Ben Shuffain (Sharon '99), set the record for touchdown passes in a game, with five in a 40-18 win at Wareham.

■ Offenses bounced back in Week 4 after weather contributed to some incredible defensive efforts in Week 3. Central Catholic topped Xaverian, 52-51, in a thrilling shoot-out, with quarterbacks Caden Smith and Will Wood both tallying six total touchdowns as the teams combined for 700-plus yards . . . Senior quarterback John Von Barta led Swampscott in a 52-14 win over Salem. The Witches rolled up 350 yards in defeat . . . Junior James Aikey passed for 272 yards and six touchdowns to lead South Shore Voc-Tech in a 64-12 win over Atlantis Charter . . . Andover and Methuen combined for 61 points in a 34-27 MVC shoot-out won by the Golden Warriors, and in Central Mass., Wachusett outlasted Leominster, 38-34, at Doyle Field . . . St. John's Prep scored a program-record 60 points in Saturday's win over La Salle Academy (R.I.), with sophomore Michael Salemi (466 all-purpose yards, four TDs) and the Eagles' special teams playing a big role.

■ For the first time since 2014, Newton North is off to a 4-0 start. In Friday's 29-18 win over Framingham, the Tigers were led again by senior captain Domenic Busa (107 rushing yards, 14 tackles, blocked extra point) and junior quarterback Connor Swanson, who rushed for touchdowns of 2 and 21 yards, adding 144 passing yards and two scores through the air.

■ Westwood defeated Medway, 16-14, on Saturday after the game was suspended with 7:48 remaining in the fourth quarter because of a power outage Friday night.

Correspondent Jake Levin contributed.

Coyne stands among Marblehead's best

MATT PORTER/GLOBE STAFF

Brian Coyne and Angela Paradise hold Owen's favorite football photo of himself.

Salem Hospital emergency room, he was examined and sent home to rest.

Two days later, he still couldn't keep food down, and his head wasn't any better. An MRI revealed a small bleed. He was medevacked to Massachusetts General Hospital, where doctors found an arteriovenous malformation, an abnormal tangle of blood vessels at high risk of rupture.

Initial tests were encouraging. Doctors were discussing a treatment plan that included surgery in about a month. He was stable and communicative.

His condition deteriorated over the course of an 11-night hospital stay. He slipped away.

To lift his spirits, Kane and two dozen friends brought the acoustic guitar he had been learning to play. Kane sat bedside and played the only song he knew: "Say You Won't Let Go," by James Arthur.

Everyone sang. "It was the greatest honor of my life," Kane said. "He was the best of us."

Angela hopes that they'll keep singing. "If you see me in the supermarket, or sitting at the pool or taking a walk, I want you to come up to me and tell me a funny story about him," she said, through tears, "so that I can continue to feel like he is still alive, just in a very different way."

He is. When Owen got his driver's license last November, he signed up to be an organ donor.

Though most adults in America support organ donation, only about half are actually signed up. Teenage signup rates are surprisingly low.

When he died, his parents said, six of his organs were given to five different men between the ages of 30 and 60.

Before they are transplanted, the organs are tested.

Compared to a normal heart, doctors told his parents, Owen's was twice as strong.

BASEBALL NOTEBOOK

Chourio saves Brewers in ninth

ASSOCIATED PRESS

Jackson Chourio says his knack for coming through in clutch situations stems from one instance when he failed to deliver during his rookie year.

Just about every Brewers opponent has been paying for that ever since, as baseball's best closer now knows.

Chourio hit a two-run single off hard-throwing **Mason Miller** with two outs in the ninth inning as the Brewers rallied past the Padres for the second straight day, a 4-3 victory Sunday giving them a 2-0 National League Division Series lead.

“I think it’s probably in the top three of the special moments I’ve had in my career,” Chourio said through interpreter **Daniel de Mondesert**.

The fact Chourio didn’t automatically rank it atop the list speaks volumes about all the memorable moments the 22-year-old already has produced in his first three seasons.

Chourio said his drive to deliver in these moments intensified after he struck out against **Andrés Muñoz**, ending a loss to Seattle in his rookie year.

“At that point, everything turned for me,” Chourio said. “I told myself I was never going to make the last out.”

San Diego, which entered the postseason with 20 wins in its last 23 games, headed home for Game 3 of the best-of-five series on Tuesday following its first back-to-back losses since Sept. 1-2.

Milwaukee rallied from 2-0 deficits on consecutive days by beating the Padres’ bullpen.

William Contreras hit a tie-breaking homer in the seventh inning against **Adrian Morejon** on Saturday.

Michael King, who played at Boston College, retired his first 14 batters as the Padres went ahead 2-0, and they led, 3-2, when Miller entered trying for his first six-out save since 2024.

The two-time All-Star closer retired the side in order in the eighth. After a leadoff groundout in the ninth, Miller issued his first career postseason walks, to **Christian Yelich** and Lexington native **Sal Frelick**.

Andrew Vaughn flied out and pinch hitter **Gary Sánchez** walked, taking six straight pitches.

That brought Chourio to the plate, one day after he sparked a 3-2 comeback victory with a tying, two-run homer in the third inning.

“Watching those at-bats beforehand, I knew that he was a little bit erratic,” Chourio said. “He was throwing some balls. I knew that he was going to come at me with the fastball at some point, so mentally I was just making sure that I was

prepared for that.”

Chourio connected on a 2-2 pitch, lining a 101.3-mile-per-hour fastball up the middle and past second baseman **Jake Cronenworth**’s attempt for a diving backhand stop.

The ball bounced into center field as Yelich ran across the plate. Frelick slid in head first, easily beating center fielder **Jackson Merrill**’s throw.

Braves even series

Michael Harris II tripled and scored the go-ahead run on reliever **Kris Bubic**’s wild pitch in the fifth inning, and the Braves beat the Dodgers, 3-2, to even the NLDS at a game apiece.

Harris’ RBI double to right against reliever **Edgardo Henriquez** added an insurance run with two outs in the seventh in what turned into a bullpen game for both teams when the Braves chased Dodgers starter **Blake Snell** after 3½ innings.

Harris also singled in the third, coming up a home run short of hitting for the cycle.

Max Muncy’s two-strike, two-out homer off **Didier Fuentes** pulled the Dodgers to 3-2 in the ninth. Braves closer **Raisel Iglesias** earned his second save after getting pinch-hitter **Josue De Paula** to foul out to third to end the game.

Runs were hard to come by after the teams combined for five homers in the Dodgers’ 5-3 victory in Game 1.

After **Mookie Betts** walked and **Shohei Ohtani** singled to open the fifth, Atlanta’s bullpen retired the next 14 consecutive Dodgers’ hitters.

Ohtani, the four-time MVP, wasn’t a factor for the second straight game, going 1 for 4 with two strikeouts.

Former Brave **Freddie Freeman** tied it at 1 on a two-strike solo shot off Braves reliever **Grant Holmes** in the fourth.

Ray Kerr started the game for the Braves, who elected to give **Chris Sale** extra rest ahead of his start in Game 3.

More bullpen games

Manager **Will Venable** said before the start of the American League Division Series that it was possible the White Sox could use bullpen games during the first three contests against the Guardians.

Venable isn’t deviating from that plan.

Anthony Kay will be the opener for Game 2 on Monday at Progressive Field. It will be the 33rd time this season the White Sox have used an opener, including the third in the postseason.

Sean Burke, a Sutton native, is expected to throw most of the innings, but Venable said he will have many options available.

GLOBE CORRESPONDENT

In Maureen Johnson's home office hangs a 1933 Vermont-New Hampshire highway map, pinned onto a corkboard. It's one of many vintage maps that the author acquired (from eBay) as research for her "Truly Devious" series, in which teen detective Stevie Bell takes on the "crime of the century" at her school, Ellingham Academy. The young adult series debuted in 2018 with its namesake novel and Johnson's latest, "The Velvet Knife," the sixth of a planned seven, was released Sept. 29.

The first three novels circle a decades-old mystery with one game-changing clue hinging on the roads that would lead to the fictional, remote Vermont boarding school, where the students pitch their extraordinary talents to attend for free. For research, Johnson stayed in Burlington and drove a rented Fiat to explore the area where the campus would be, which she estimates is about "20 minutes outside of town" toward the mountains. She then sketched a detailed map of Ellingham that illustrator Virginia Allyn would re-create for the novels' front matter.

The first four books take place in New England — "The Box in the Woods" is set at a Massachusetts summer camp — but this time, the author sends Stevie to Johnson's current home in New York. With an impressive reputation for solving cold and current cases (simultaneously), Stevie is faced with a mystery where her honed skills of deduction fail her: a broken heart.

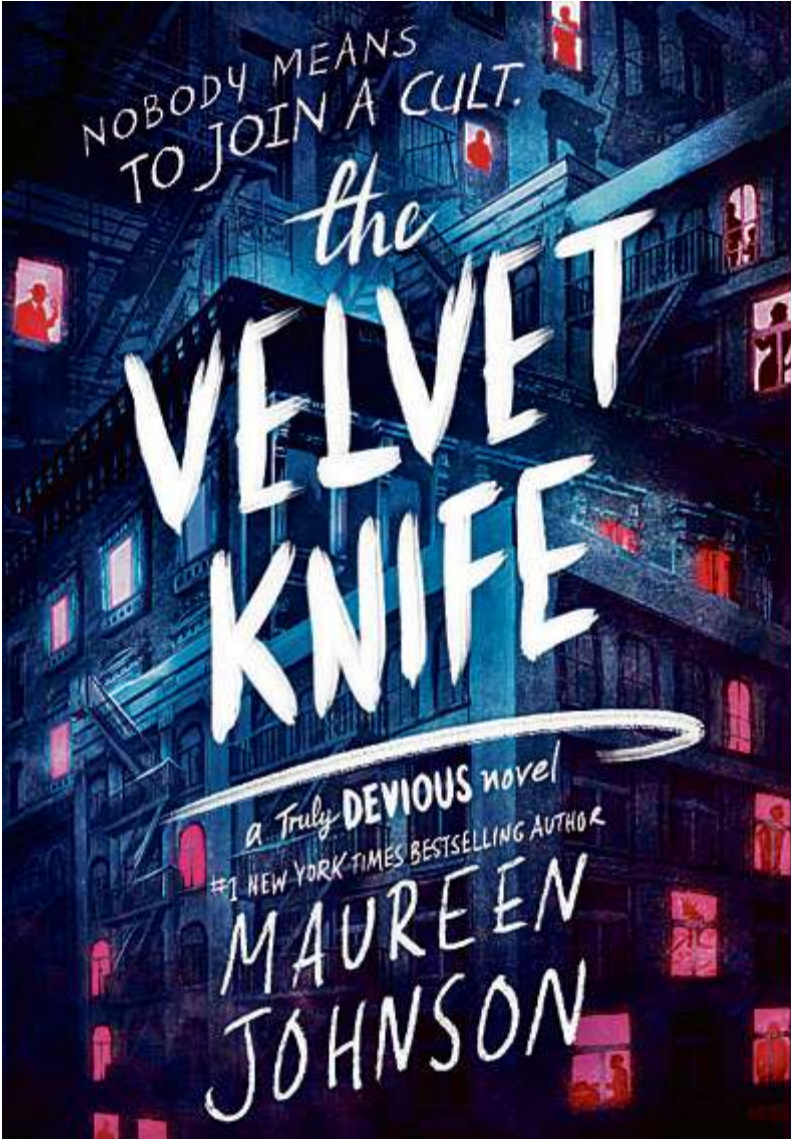

Reckoning with the aftermath of two breakups — with an unpredictable ex and her woefully predictable parents — a forlorn Stevie joins classmate and confidant Nate for the holidays in lower Manhattan, where a mysterious neighbor passes the 18-year-old sleuth somewhat nebulous clues to a murder, before she, herself, is found dead. As in the previous novels, a historical back story runs alongside Stevie's present-day investigation (while she attempts to survive college applications and her senior year). This time, violence on a 1970s commune is set against a lower Manhattan apartment complex with quirky residents who just happen to die sometimes, while both timelines explore pervasive and persistent abuses of power and manipulation, big and small.

"A loose connection I think about is how history and mystery are the same thing," Johnson says in an interview with the Globe. "What we have is some relics and artifacts, whether it's [from] 2,000 years ago, 800 years ago, the Civil War, or last week. History is always a story that we take from the evidence. But we get a solution in mysteries, which is why I think that mysteries always become more popular during times of stress — mysteries have a way of helping us resolve and get some sort of comprehensive ending and sometimes, consequences, like the right thing is supposed to happen at the end."

Before her book tour, Johnson chats from her home in New York about cults, conditioning, and plotting from the center out.

The first novel came in the wake of the 2016 election, making Stevie's complex relationship with her very right-leaning, conservative parents interesting. This time, things come to a head, and there's a line: "Liking can be so much harder than love." What about building this type of parent-child dynamic into the series was important to you?

This is a really fractured time and there are families that are absolutely being fractured. Just being real, your parents aren't always right. They may love you ... but it doesn't mean they're right and it doesn't mean what's going on is right. Your instincts as a teen could be accurate. But you do have choices. Sometimes these relationships are hard and you just don't have to

ANGELA ALTUS

In Maureen Johnson’s new mystery, her teen detective would rather commune with the dead

conform ... but you can still love.

Many of Stevie's cases featured adults, and I've often wondered if her teenage identity qualified or aided her as a detective in any special way — like Sherlock Holmes' deductive reasoning or Miss Marple's ability to blend in.

She's kind of an outsider looking in, and as an outsider examining a system you don't quite understand, you have to pay more attention. My example is that when I was 13, I started high school at a Catholic girls' academy and I was not Catholic and had no idea what was going on, but everyone else did. I had to do a lot of studying — it was always kind of faking it till I made it. I tried to put a little of that in Stevie, where she's eyes wide open.

The book's back story features a small cult in 1976. Were you inspired by any particular historical events or figures — the Manson Family and the like?

You could say [cult], loosely. But I think the term now is probably more like a high-control

group around a charismatic leader, because people don't join cults. They join a self-improvement organization, a business, a meditation circle, a religion. They join something that they think is positive. Then it morphs — the goalposts change — because the focus is what the leader wants.

When plotting and planning, what comes first — a historical topic or the protagonist's arc?

I have this bank in my head of what kinds of stories I wanted to tell — I always knew one was going to be a cult, one a country house, a sleep-away camp. I'm playing with the genre.

The past mysteries are super easy for me to write for some reason. They come out like water, and then, the work is the present [story]. I try to build a very strong puzzle and always work from the center out. I imagine the mystery or the crime is the central event of a circle. And then there are circles of time going out around it with clues and information, and I pull threads off of that. It's very visual for me.

This time, we follow Blue, who joins the commune and is likely the closest character in age and circumstance to Stevie across the series' other historical back stories.

She's smart. She isn't like a lot of people. She moves to 1970s New York, a really cool place to be. She doesn't fit in with her family ... doesn't want to go back to Mount Holyoke College or wear pearls or live on the Upper East Side. But she's lonely. And she meets these people in Tompkins Square Park and they are an instant friend group. So she's happy, but not unaware.

People who get involved with these groups tend to be idealistic and smart. And smart people can do things that are illogical and very dangerous if you're conditioned right. That's why the title of the book is "The Velvet Knife." It's about conditioning. It's not what the knife is made of; if you make the substance itself soft enough, you can cut through anything.

Rachmaninoff’s ‘Dies Irae’ haunts BSO’s all-Russian program

By A.Z. Madonna
GLOBE STAFF

"Dies Irae," a medieval chant from the Latin requiem Mass, is one of the oldest and most frequently sampled melodies in music. Haydn cribbed it for his Symphony No. 103, Berlioz built his vision of hell on it for "Symphonie-fantastique," Saint-Saens imagined skeletons capering to it with "Danse macabre." And it is not confined to the concert hall. It pops up in film scores and musicals, too: "Rent," "Sweeney Todd," "Project Hail Mary," and "KPop Demon Hunters," to name a few. But perhaps no single composer has been more haunted by the ominous refrain of "Dies Irae" than Sergei Rachmaninoff, who quoted it in symphonies, piano concertos, sonatas, and seemingly

whatever he could, including both pieces in last week's Boston Symphony Orchestra's all-Rachmaninoff program, the "Rhapsody on a Theme of Paganini" for piano and orchestra, and the Symphony No. 2.

At the piano bench for the Rhapsody sat South Korean pianist Seong-Jin Cho, a frequent BSO guest since his 2020 debut with the orchestra. Cho is among the handful of soloists who can cause a ticket shortage, and perhaps to anticipate that, the orchestra tacked on an extra Wednesday concert on top of the usual three-day run. Symphony Hall appeared to be around three-quarters full despite the timeslot, so assuming that the typical dates were more popular, that was a savvy move.

This is the third BSO appearance for Cho this calendar year, and all of them so far have featured big Russian works, first Tchaikovsky, now Rach-

HILARY SCOTT/BSO

Seong-Jin Cho performed Rachmaninoff's "Rhapsody on a Theme of Paganini" with Andris Nelsons and the Boston Symphony Orchestra Wednesday.

maninoff. That said, Cho's approach to the Russian repertoire is colored by his penchant for French music, specifically Debussy and Ravel (he released a recording of Ravel's piano concertos with the BSO last year), and in his hands, the "Rhapsody" was uniquely mesmerizing. Coming out of the introduction, Cho levitated off the piano bench as if shocked, and the skittering Paganini melody seemed to take on a life of its own. It evolved and morphed into increasingly mercurial

variations on itself in the piano as the orchestra in turn played interlocutor and inner voice to the soloist, the "Dies Irae" peering around the corner like a cold wind.

The 18th variation inverts the anxious minor-key Paganini theme into a swooning, blissful reflection of itself, and it has become famous as a classical-compilation standard in its own right. In context with the rest of the piece as played by Cho, it served as a moment's sweet respite from the

simmering tension that was clearly still to reach its boiling point, and after that variation, the piano — which I had unconsciously started thinking of as the protagonist — seemed ineffably more grounded and resolute, loins girded for the thunderous cadenzas to come. As an encore, he offset the fireworks of the Rachmaninoff with an unfussy and elegant Chopin waltz.

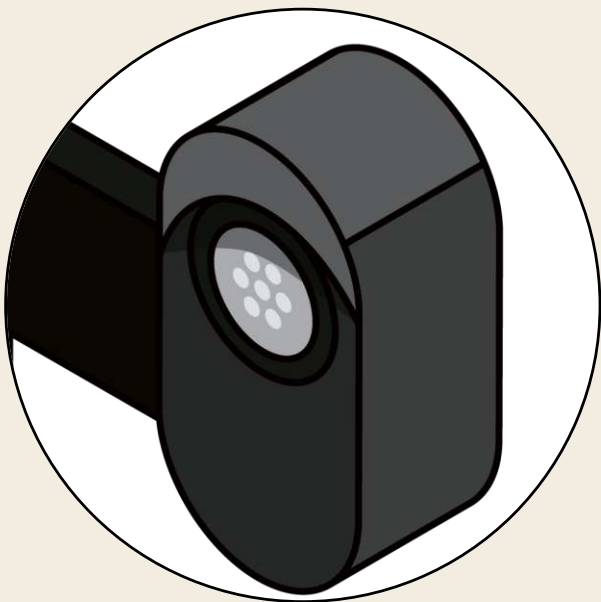

Though the hall was respectably full, there were sufficient empty seats for plenty of patrons to sneak forward during intermission, and the orchestra level looked significantly more crowded as the ensemble tuned up for the second half, Rachmaninoff's hourlong Symphony No. 2.

Some maestros have made cuts to this symphony, and Rachmaninoff was allegedly not a fan of that, telling his friend Eugene Ormandy that the practice was "like cutting a piece out of my heart." Nelsons led the piece without cuts, at a tempo that at times felt sublime and meditative but other times veered into lugubrious. The deciding factor seemed to be how on point and unified the orchestra was behind Nelsons's direction for the piece, and that ranged from 100 percent to maybe 70. Nelsons was clearly pushing for more tempo and dynamic elasticity during the lyric swoop of the C major theme in the second movement. That needed 100 percent, and it didn't get it.

Nelson's Achilles' heel as a conductor has always been a tendency to get lost in the details, and this symphony has so, so very many details. It was probably an irresistible temptation; they're all so exquisite when you get them right, especially in that third movement. But that left Wednesday's performance in an awkward place, where the soaring energy of the finale seemed like an afterthought, an epilogue by a different author.

How Flock cameras work

Automatic license plate readers are now all over, capturing oceans of data.

By John Hancock and Scooty Nickerson
GLOBE STAFF
and Yogev Toby
GLOBE CORRESPONDENT

Across Massachusetts, small black cameras are photographing passing cars, capturing such details as the license plate, the color, and the roof rack. Police can search those records in seconds, sometimes from the other side of the country.

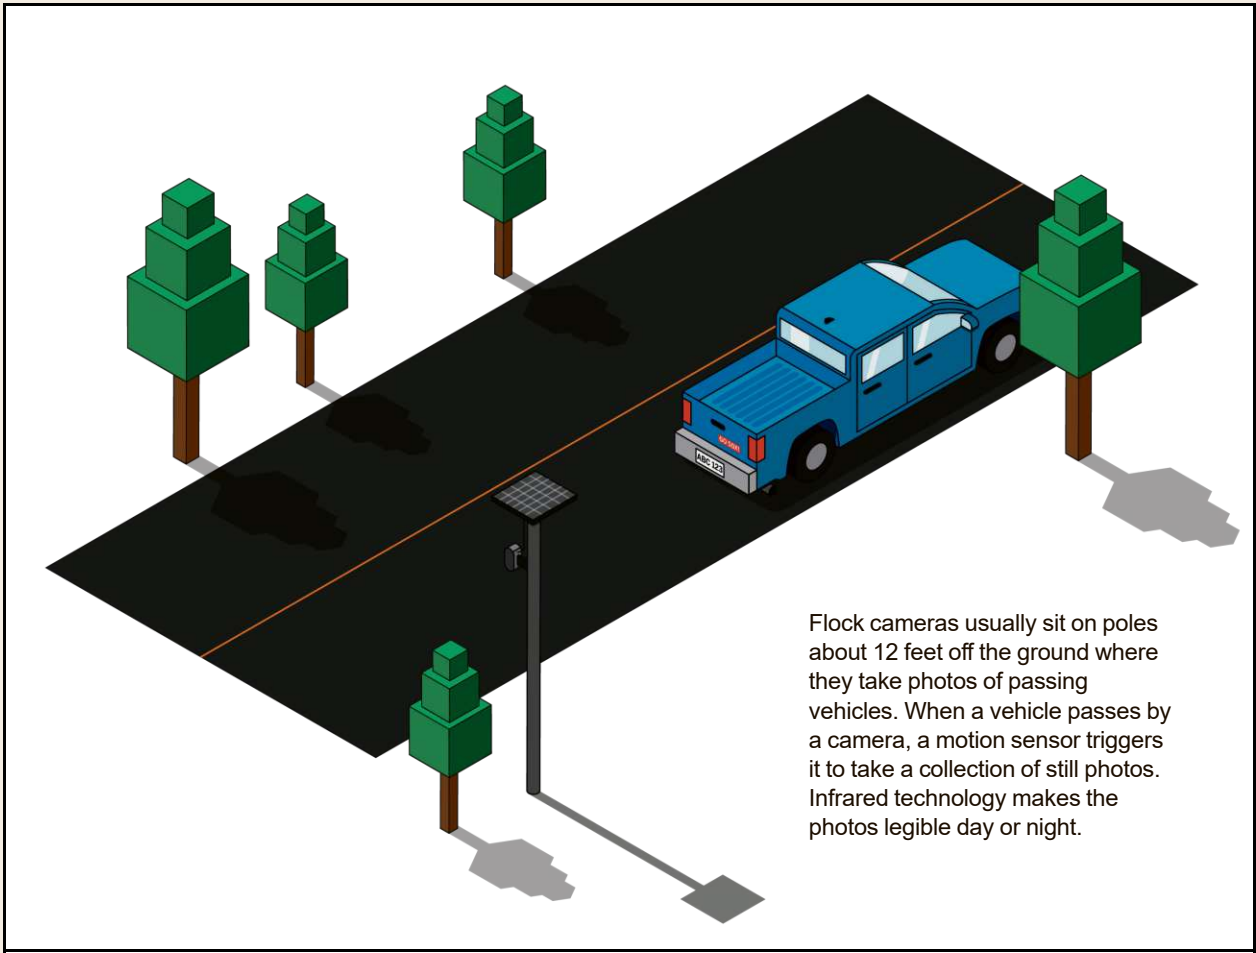

These automatic license plate readers are often referred to simply as Flock cameras after Flock Safety, an Atlanta-based manufacturer. But Motorola, Axon, and other companies sell them, too.

While license plate readers have been around for more than a decade, the widespread integration of AI and a searchable nationwide database have spurred adoption in recent years by law enforcement and even private companies including Home Depot and Lowe's. Among the manufacturers, Flock's cameras are the most widely used.

Police say the camera networks help them find missing people or vehicles involved in crimes quickly. For instance, officials touted the technology as instrumental in locating the Brown University shooter last year. But advocacy groups including the ACLU say they are tools of mass surveillance that can track anyone — regardless of whether they committed a crime — without a warrant and little oversight.

More than 100 communities in Massachusetts have contracted with Flock, per a Globe tally. Thirty-eight communities have moved to limit their use since last fall, according to the ACLU.

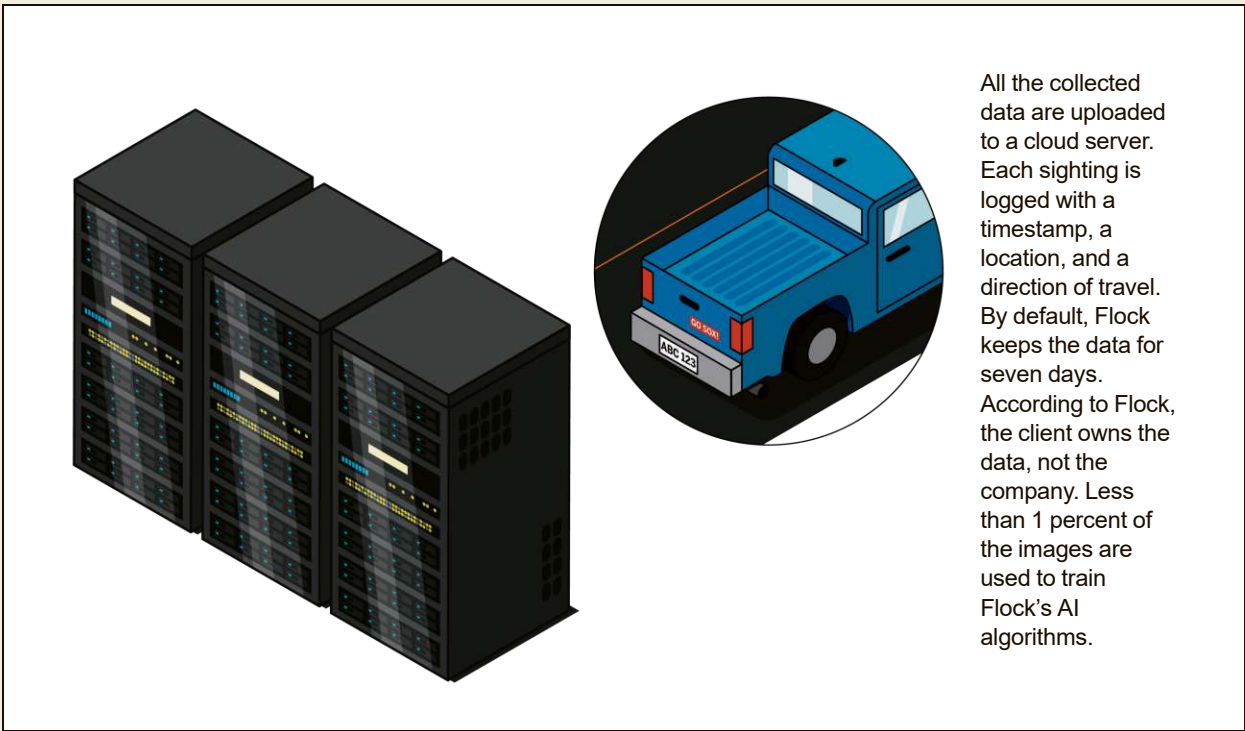

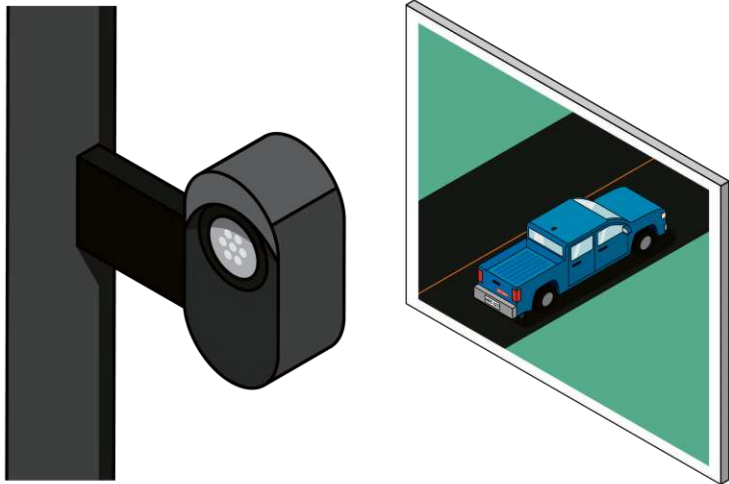

But how do these things actually work? We took a closer look at Flock's system.

Flock cameras usually sit on poles about 12 feet off the ground where they take photos of passing vehicles. When a vehicle passes by a camera, a motion sensor triggers it to take a collection of still photos. Infrared technology makes the photos legible day or night.

After the camera snaps the photos, AI-enabled software reads each image. It pulls the license plate number, then logs details about the vehicle, such as its make, color, and body type. It also records details about the vehicle that a witness might remember, including roof racks, bumper stickers, or visible signs of damage.

While license plate readers have been around for a while, the incorporation of AI has supercharged their capabilities, as vehicles can be tracked down using just descriptions without a license plate number.

All the collected data are uploaded to a cloud server. Each sighting is logged with a timestamp, a location, and a direction of travel. By default, Flock keeps the data for seven days. According to Flock, the client owns the data, not the company. Less than 1 percent of the images are used to train Flock's AI algorithms.

Is fourth time a charm for Southie convention center expansion?

JON CHESTO
POWER PLAY

Every March, the Seafood Expo North America draws nearly 20,000 people to South Boston from around the world to talk fish.

But come 2030, the event's organizers at Diversified and its 1,200 exhibitors may be in the market for something bigger. That's when the growing expo could exceed the available exhibit space at the already-sprawling Thomas Michael Menino Convention and Exhibition Center.

Sure, there are other fish in the sea, but convention boss John Barros does not want this signature show to be the one that got away. And Diversified isn't the only restless Massachusetts Convention Center Authority client. That's why the MCCA interim executive director is trying what his predecessors failed to do: kick-start an expansion of the 22-year-old South Boston facility.

Get in the loop with a twice-weekly dive into the power players and moves driving business in Massachusetts. Sign up for The Boston Globe's scoop-driven Power Play newsletter, authored by prominent Globe columnists Shirley Leung and Jon Chesto.

STAT

In Shanghai's 'Science City,' China's ascendant biotechs make their pitch to the world

By Jason Mast
STAT

SHANGHAI — The biotech executives appeared triumphant.

It was a balmy, overcast Sunday here in the glimmer-and-glass "Science City" district, and the four leaders were on stage at the ballroom level of the five-star Hilton, joking about how much faster, cheaper, and more efficient drug development was here in China than anywhere else — certainly than the United States. (And God help Europe.)

Zhui Chen, cofounder of the now \$6 billion Shanghai-based biotech Abbisko, recalled running a trial on a

drug licensed to the German pharma Merck KGaA. Abbisko's trial finished in 11 months, so quickly that Merck executives asked if Abbisko could train their staff.

For two years, American labs and board rooms have been riven with excitement and anxiety over the vertiginous rise of Chinese biotech. Almost overnight, it seemed, a half-century of American dominance in life sciences had evaporated. Big Pharma executives in New Jersey and New York scrambled to license drugs from Chinese companies few American scientists had ever heard of, hoping

SHANGHAI, Page D2

China has courted biotech for years

►SHANGHAI

Continued from Page D1

to find the next blockbuster to fill their balance sheet. Founders and investors in South San Francisco and Kendall Square watched their companies get passed over — or fold altogether — and wondered if they had a future.

To plant its own flag, Jefferies, the New York investment bank, convened its first Shanghai-based conference. The rationale was simple. The largest US life science conference is J.P. Morgan's San Francisco summit. The largest European conference is held by Jefferies in London. China is still up for grabs.

On the main stage, panelists debated artificial intelligence, obesity, geopolitical tensions, American innovation versus Chinese execution, and the best way to commercialize a drug. Many pleaded for collaboration, not competition.

Executives walked through their pipelines in English, flashing antibody drugs in full Revlon counter variety. Local representatives from hulking multinationals like GSK, Merck, and Sanofi roamed the halls, scouting potential prospects. A contingent from SK Biopharmaceuticals, the Korean pharma, filled an elevator.

Even longtime veterans of the drug industry here struggled to make sense of what they're seeing.

"It's really blowing like everyone's mind, right?" said Betty Huang, who helps spearhead Chinese business development for the German pharma Bayer.

Behind closed doors, a new wave of deals were coming to the fore. Cui Cui, Jefferies's head of health care research for Asia, told local media that investors had traveled from Brazil and South America. The Shanghai conference was appended to a broader Asia tour, and Cui said she had met with representatives from a Texas teachers' pension fund in Korea who "are very interested in China" — though they can't invest for "various reasons."

Venrock and other US VC firms had staff on site, talking trades and scoping out local operations. One US-based investor was trying to decide if they needed to hire someone in the region full time. Michael Garrow, chief investment officer of HS Group, a Hong-Kong based investment firm that backs specialized hedge funds, was meeting with portfolio managers to see if it was time to reinvest. Could he find "the RTW or RA Capital of Asia?" he said, naming prominent US health care funds.

A decade ago, health care-focused firms had popped up and flamed out in Asia. But now, there seemed to be "real innovation," he said.

It was a well-timed summit. Two days before kickoff, the Chinese government issued its latest five-year-plan for biotech. By 2030, it wrote, Chinese drug developers should have at least five blockbuster drugs. One fourth of all first-in-class drugs should come out of China.

Bold, to say the least. Today, Chinese drugmakers have one or two blockbusters.

It's hard, though, to see the latest frenzy of dealmaking and see anything but a diagonal line pointing up. The numbers vary, depending on which bank, consulting firm, or analyst you trust. But Chinese-designed drugs now make up about a third of the world's pipeline and draw more than half of all licensing or collaboration deals, as measured by total dollar value.

Morgan Stanley seems to be a believer, projecting Chinese-designed drugs will account for 35 percent of all Food and Drug Administration approvals by 2040, compared to 5 percent today. So is Pfizer CEO Albert Bourla, who warned an Atlantic Council audience recently that the gravity had already shifted.

"I don't want to lose the superiority of the US biopharma to the Chinese, which I see that

happening in five years," he said. "I don't want that to happen. But we are putting 80 percent of our energy to think how to slow them down rather than 80 percent of our energy to see how we can become better than them."

If you can't beat 'em...

The Chinese government has been trying to steward biotech here for years, with mixed success. In the 2000s, large pharmas like GSK and Novartis set up R&D centers here, but most of them ultimately pulled back, with little to show for the lucre spent.

Most observers point to 2015 as the pivotal moment. The government started speeding review of new trials and approvals and brought its clinical trial system in line with international standards. In 2018, the Hong Kong stock exchange allowed unprofitable companies to go public, thus boosting biotech fund-raising and VC returns.

Meanwhile, Chinese contract research organizations and manufacturing companies, like Wuxi AppTec, grew remarkably efficient, in part by working with American companies. Local scientists learned drug development inside these CROs, or the local divisions of Big Pharma. Or they trained abroad and came home.

American companies still work with the CROs, which are tightly woven into the ecosystem here. "A Chinese scientist who is using a CRO can just ride a bike and supervise them on how to do the science," said one prominent Chinese biotech venture capitalist. "Unlike sitting in Boston, where you send an email and they respond a day later."

Meanwhile, companies can enroll patients faster because large hospitals attract thousands of patients for care.

The result is companies that can engineer molecules every which way with ruthless efficiency and put them into early development on the cheap. After mastering generics, companies moved on to me-too-drugs, then me-better, and now are competing with US companies to develop more novel compounds.

Today, the old GSK building is occupied by Abbisko, beside other local pharma companies in an office park that features a KFC and Starbucks. Their scientists, typically making around 50 percent of what a US scientist would make, contribute to a system that is about 50 percent to 70 percent faster than the rest of the world in developing trial-ready molecules and then two to five times faster at recruiting patients for late-stage trials, per McKinsey estimates.

Ying Huang, who steered the Chinese-founded startup Legend Biotech as it beat out US competitors to develop a powerful cancer cell therapy Carvykti, sat on the same panel as Chen, the Abbisko cofounder. He said his distressed Boston colleagues complain that office and lab space in Kendall Square is vacant and they can't get funding.

"We all know that this is the competition," said Huang, who lives in New Jersey and now runs a startup licensing molecules out of China. "Whoever is more innovative, whoever is more efficient, will get investment."

Kendall Square's role

For all the fanfare, few thought — or at least would say — that the US biotech industry would wither away. Kendall Square would survive, assured Eric Liu, managing director of Banyan BioInnovations, a new China-focused offshoot of the life sciences investment bank Locust Walk.

"The best minds will all go there," he said in an interview, as staff packed up tables from the conference. "Because the big pharma senior R&D guys are there, the general perception is, OK, 'I might have the infrastructure, CRO work, whatever here, but I still want my CSO to be in Kendall Square.'"

FUEL

MAJOR OIL EXPORTERS TO KEEP PRODUCTION STEADY IN NOVEMBER

Seven major oil-exporting countries agreed Sunday to keep production steady in November at a time when the Iran war has driven the price of benchmark Brent crude oil above \$100 a barrel. The so-called OPEC+ subgroup — Saudi Arabia, Russia, Iraq, Kuwait, Kazakhstan, Algeria, and Oman — will meet again on Nov. 1 to review conditions in the oil market. The fighting with Iran, which began with US and Israeli attacks on Feb. 28, has disrupted global oil supplies and driven prices higher. The Group of Seven wealthy democracies said Friday that they plan to release 100 million barrels of oil and fuel products in the coming weeks, starting with "substantial" amounts of diesel. Diesel prices recently hit record highs in the United States, squeezing farmers, truckers, and consumers who depend on the fuel. The G7 promised a "frontloaded substantial release" of diesel within the next 20 days and the rest over four months.

CENTRAL BANKS

FED, ECB MINUTES: INFLATION FEARS AS HIKE BETS FADE

Any urgency among Federal Reserve and European Central Bank policymakers to follow up September interest-rate hikes at this month's meetings has been dialed back in the wake of soft US jobs data and acute stress in French financial markets. Both central banks in the coming days will release minutes of the meetings last month at which they raised benchmark rates, bowing to concerns about mounting inflationary pressures. In the US, solid economic growth has been bolstering the job market, allowing the Fed to zero in on inflation. Minutes of the Fed's September gathering, due on Wednesday, could reveal that many policymakers were deeply worried about underlying price trends and expecting to lift rates at least one more time before the end of the year. However, fresh employment data on Friday showed lower-than-expected job creation and lackluster wage growth — adding to evidence that the labor market isn't contributing to existing inflationary winds. Earlier in the week, government revisions to the Fed's preferred price gauge showed inflation has been a bit softer this year.

— BLOOMBERG NEWS

HEALTH

WOMEN CAN NOW ASSESS THEIR BREAST CANCER RISK WITH AI

Starting Thursday, women across the United States will be able to find out their risk of developing breast cancer in the near future with the help of an artificial intelligence tool that examines a single recent mammogram. Everlywell, a digital health company, announced it would now offer patients nationwide access to Clairity Breast, an AI tool approved by the Food and Drug Administration last year to predict a woman's five-year risk of breast cancer based on imaging. The test, which was previously available only at select locations in Massachusetts and Colorado, will cost \$249. It is not covered by insurance. Doctors use mammograms to detect the presence of cancer, sometimes with the help of AI models that can read the images. But Clairity's software uses the scans for a different purpose: predicting the risk of developing cancer and providing a probability score that reports the patient's future risk in the form of a percentage, from zero to 100 percent. That score, which doctors should consider along with other clinical information like family and patient medical history and other risk factors, could aid in efforts to detect cancers earlier, when they are more treatable, and more likely to have better outcomes, said Dr. Eleonora Teplinsky, head of breast and gynecologic medical oncology at Valley Health System in Paramus, N.J.

BOX OFFICE

'DIGGER' COLLAPSES AS WARNER FILM CHIEFS EXIT

"Digger," the last film to be released from Warner Bros. Discovery Inc. before its acquisition by Paramount SkydanceCorp. closes on Oct. 6, was a major disappointment at the box office, taking in just \$8 million on its opening weekend. The movie is directed by Alejandro Iñárritu and stars Tom Cruise in the lead role of a theater actor playing an oil tycoon responsible for an environmental catastrophe. It is the latest commercial failure in a string of setbacks from Warner Bros. this year, including "The Bride!" and "The End of Oak Street," which have cumulatively lost the studio hundreds of millions of dollars. "Digger" marks a departure from Cruise's performances in the past two decades, which have been anchored mostly in action genre franchises such as "Mission: Impossible."

— BLOOMBERG NEWS

Barros picks up expansion plans again

►POWER PLAY

Continued from Page D1

To pull it off, Barros appointed a strategic plan advisory committee, consisting primarily of business leaders and other key players in South Boston, the Back Bay, where the Hynes Convention Center is located, and Springfield, home to the MassMutual Center.

Who's in the room? Usual suspects, such as Greater Boston Chamber of Commerce chief executive Jim Rooney, Meet Boston chief executive Martha Sheridan, A Better City's Kate Dineen, and Springfield Thunderbirds president Nate Costa. Some unexpected choices, too, like Live Nation impresario Don Law, Eneida Roman from We Are ALX, and sports lawyer Alain Mathieu at Foley Hoag. In all, it's a 40-person gang, checking most boxes. But it's also kind of unwieldy for quick deliberations.

And, yes, their timeframe is a short one. They met for the first time on Sept. 10, when Barros outlined what he's trying to accomplish. His goal: to have a bond bill to help pay for the expansion filed with the state Legislature early next year.

The focus isn't just the South Boston location, but also work at the Hynes and MassMutual. Still, Barros is particularly worried about the flagship Southie complex losing ground to Boston's competitors like, say, Los Angeles and Dallas.

Barros is considering a new ballroom and more exhibit and meeting room space in South Boston, along with a theater or other neighborhood amenities. In Springfield, new seating areas or restaurants.

The Hynes could be better integrated into the neighborhood. Meanwhile, he wants the MCCA to become more of a convener by generating new event ideas. Maybe one focused on

RYAN HUDDLE

Massachusetts Convention Center Authority Interim Executive Director John Barros is planning for expansion.

women's sports, or Boston's answer to the famed J.P. Morgan health care conference in San Francisco.

The MCCA has been down this road before. More than once, in fact. When Rooney ran the convention center authority, he nearly got the bonds out the door to build a billion-dollar expansion. The Legislature gave him the green light. But then Charlie Baker became governor in 2015 and quickly put the project on pause.

David Gibbons, Rooney's successor under Baker, tried in 2019 for a more modest expansion, to be funded by offering up the Hynes for redevelopment. The Back Bay freaked out, and legislative leaders soured on the plan. The pandemic hit. Eventually, Gibbons surfaced another modest expansion plan without jettisoning the Hynes. It didn't get far, either.

Now, it's Barros's turn. The pandemic is long gone, and the convention business is boom-

ing again. Can Boston keep up?

One selling point: no new taxes. The Convention Center Fund, which helps cover MCCA budget shortfalls, collected \$240 million from tourism taxes in just the 2025 fiscal year. The debt service on the original Southie facility was recently paid off, making room for new borrowing.

Rooney, wearing a different hat today, says Barros's biggest challenge may be fielding questions about the overall state of the industry, and how Boston fits, particularly when stacked against warmer cities with year-round convention calendars. (Rooney, too, designed an expansion plan based around the convention center fund revenue, without raising taxes.)

Dineen suspects the Legislature will be open to the bond bill: It builds on a broader statewide economic development strategy pursued by the Healey administration, showing love to Western Massachusetts as well

as Boston.

For developer Jon Davis, another committee member, expanding in Boston is a no-brainer, considering the Seaport was a sea of parking lots when the MCCA opened, and now it's a thriving new neighborhood. (Davis is one of the people behind the massive Omni Hotel across the street.)

Will Barros be there to shepherd this legislation? The Healey administration appointed him on an interim basis in January, after a high-profile clash between the MCCA board and predecessor Marcel Vernon. But Barros is talking now like someone who will stick around.

Gibbons tried an expansion without engaging the broader community. By recruiting 40 potential ambassadors for the project, Barros isn't making the same mistake.

How Flock cameras work

►FLOCK CAMERAS Continued from Page D1

The collected data are automatically cross-referenced with a “hot list,” which may include vehicles marked as stolen, associated with a wanted or missing person case, or suspected of being involved in another criminal activity. These lists are constantly updated by local, state, and federal law enforcement agencies. When a camera spots a match, police agencies automatically get an alert, said Eric Piza, a professor and director of crime analysis initiatives at Northeastern University.

Police officers with access to Flock’s software can also search the system for vehicles based on the license number or other recorded characteristics. Each query requires a search reason, such as “stolen vehicle” or “missing person.” But options also include vague and nondescript reasons like “investigation.” A spokesperson for Flock said that they will also

require specific case codes for all law enforcement searches by the end of the year. In shooting and other major crime investigations, the search feature can narrow down suspects quickly, Piza said, by helping pinpoint vehicles and license numbers in the vicinity. The general public cannot search Flock’s database on their own. But

police departments can choose to publish a transparency portal showing their policies and the number of vehicles detected on their local network. Some portals also include a redacted list of recent searches. Police in Franklin and Lowell are among those in Massachusetts with public portals, but most departments do not publish one.

MORTGAGEE’S SALE OF REAL ESTATE

By virtue of and in execution of the Power of Sale contained in a certain mortgage given by Jean E. Baker to Chase Manhattan Mortgage Corporation, dated February 13, 2004 and recorded in Norfolk County Registry of Deeds in Book 20590, Page 561 (the “Mortgage”) of which mortgage NewRez LLC f/k/a New Penn Financial, LLC d/b/a Shellpoint Mortgage Servicing is the present holder by Assignment from JP Morgan Chase Bank National Association s/b/m Chase Home Finance LLC s/b/m to Chase Manhattan Mortgage Corporation to New Penn Financial, LLC d/b/a Shellpoint Mortgage Servicing dated August 31, 2018 and recorded at said Registry of Deeds in Book 36277, Page 312, for breach of conditions of said mortgage and for the purpose of foreclosing the same, the mortgaged premises located at 28 Heaton Avenue, Norwood, MA 02062 will be sold at a Public Auction at 1:00 PM on October 14, 2026, at the mortgaged premises, more particularly described below, all and singular the premises described in said mortgage, to wit:

That certain parcel of land with all the building(s) and structures now or hereafter standing or placed thereon, situated in that part of Boston formerly West Roxbury, Suffolk County and Commonwealth of Massachusetts, being Lot #160 on a plan made by W.C. Bates, dated January 21, 1916, recorded with Suffolk Deeds at the End of Book 2943, and bounded and described as follows:

NORTHEASTERLY by Elven Road, forty-four (44) feet;
SOUTHEASTERLY by Lot #159 on said plan, eighty-eight (88) feet;

SOUTHWESTERLY by Lot #166 and 165 on said plan, forty-four (44) feet and

NORTHWESTERLY by Lot #161 on said plan, eighty-eight (88) feet.

Containing 3872 square feet.

For mortgagor’s title see deed recorded with the Suffolk County Registry of Deeds in Book 36060, Page 297.

The premises will be sold subject to any and all unpaid taxes and other municipal assessments and liens, and subject to prior liens or other enforceable encumbrances of record entitled to precedence over this mortgage, and subject to and with the benefit of all easements, restrictions, reservations and conditions of record and subject to all tenancies and/or rights of parties in possession.

Terms of the Sale: Cashier’s or certified check in the sum of \$5,000.00 as a deposit must be shown at the time and place of the sale in order to qualify as a bidder (the mortgage holder and its designees) are exempt from this requirement); high bidder to sign written Memorandum of Sale upon acceptance of bid; balance of purchase price payable by certified check in thirty (30) days from the date of the sale at the offices of mortgagee’s attorney, Korde & Associates, P.C., 900 Chelmsford Street, Suite 3102, Lowell, MA or such other time as may be designated by mortgagee. The description for the premises contained in said mortgage shall control in the event of a typographical error in this publication.

Other terms to be announced at the sale.

LEGAL NOTICES

COMMONWEALTH OF MASSACHUSETTS
LAND COURT
DEPARTMENT OF THE TRIAL COURT
Docket No. 26 SM 003135
ORDER OF NOTICE

TO: Robert Fountain and Jillian M. Fountain

and to all persons entitled to the benefit of the Servicemembers Civil Relief Act, 50 U.S.C. c. 50 §3901 (et seq):

Lakeview Loan Servicing, LLC

claiming to have an interest in a Mortgage covering real property in Acton, numbered 24 Duggan Road, given by Robert Fountain and Jillian M. Fountain to Mortgage Electronic Registration Systems, Inc., as mortgagee, as nominee for Quicken Loans, LLC, its successors and assigns, dated June 24, 2021, and recorded in Middlesex County (Southern District) Registry of Deeds in Book 78128, Page 252, and now held by the Plaintiff by assignment, has/have filed with this court a complaint for determination of Defendant/s/Defendants’ Servicemembers status.

If you now are, or recently have been, in the active military service of the United States of America, then you may be entitled to the benefits of the Servicemembers Civil Relief Act. If you object to a foreclosure of the above-mentioned property on that basis, then you or your attorney must file a written appearance and answer in this court at Three Pemberton Square, Boston, MA 02108 on or before 11/09/2026 or you may lose the opportunity to challenge the foreclosure on the ground of noncompliance with the Act.

Witness, GORDON H. PIPER Chief Justice of this Court on 9/28/2026.
Attest: Deborah J. Patterson, Recorder

MORTGAGEE’S SALE OF REAL ESTATE

By virtue of and in execution of the Power of Sale contained in a certain mortgage given by Jean E. Baker to Chase Manhattan Mortgage Corporation, dated February 13, 2004 and recorded in Norfolk County Registry of Deeds in Book 20590, Page 561 (the “Mortgage”) of which mortgage NewRez LLC f/k/a New Penn Financial, LLC d/b/a Shellpoint Mortgage Servicing is the present holder by Assignment from JP Morgan Chase Bank National Association s/b/m Chase Home Finance LLC s/b/m to Chase Manhattan Mortgage Corporation to New Penn Financial, LLC d/b/a Shellpoint Mortgage Servicing dated August 31, 2018 and recorded at said Registry of Deeds in Book 36277, Page 312, for breach of conditions of said mortgage and for the purpose of foreclosing the same, the mortgaged premises located at 28 Heaton Avenue, Norwood, MA 02062 will be sold at a Public Auction at 1:00 PM on October 19, 2026, at the mortgaged premises, more particularly described below, all and singular the premises described in said mortgage, to wit:

The land in said Norwood containing about 5,000 square feet and being numbered Lot 65 on a plan of Building Lots in Norwood, Massachusetts.

Belonging to C.E. Carlson and O.W. Haegge, Trustees, August 1897, Robert Rogers, Civil Engineer and recorded with Norfolk Deeds, Book 795, Page 387 and bounded and described as follows:

Easterly by Lot numbered 64 on said plan, one hundred (100) feet; southerly by Heaton Avenue fifty (50) feet; Westerly by Lot numbered 66, on said plan, one hundred (100) feet and Northerly by Lot numbered 42 on said plan, fifty (50) feet.

Being part of the premises conveyed to Domininka Jusionis by Deed dated November 25, 1924, recorded with Norfolk Deeds, Book 1623, Page 75.

For mortgagor’s title see deed recorded with the Norfolk County Registry of Deeds in Book 1107, Page 386.

The premises will be sold subject to any and all unpaid taxes and other municipal assessments and liens, and subject to prior liens or other enforceable encumbrances of record entitled to precedence over this mortgage, and subject to and with the benefit of all easements, restrictions, reservations and conditions of record and subject to all tenancies and/or rights of parties in possession.

Terms of the Sale: Cashier’s or certified check in the sum of \$5,000.00 as a deposit must be shown at the time and place of the sale in order to qualify as a bidder (the mortgage holder and its designees) are exempt from this requirement); high bidder to sign written Memorandum of Sale upon acceptance of bid; balance of purchase price payable by certified check in thirty (30) days from the date of the sale at the offices of mortgagee’s attorney, Korde & Associates, P.C., 900 Chelmsford Street, Suite 3102, Lowell, MA or such other time as may be designated by mortgagee. LEGAL NOTICES

NOTICE OF VESSEL ARREST
United States District Court,
District of Massachusetts
Merrimack County Savings
Bank v. M/V KOOPER
(Official No. 1282296), et al.
Civil Action No. 1:26-cv-12543-GAO

PLEASE TAKE NOTICE that the M/V KOOPER, a 2018 Boston Whaler 320 Vantage, bearing HIN: 8WCE0282H718, and Official No. 1282296, together with her masts, boilers, cables, engines, machinery, bowsprits, sails, rigging, boats, anchors, chains, tackle, apparel, furniture, fittings, tools, pumps, equipment and supplies and all fishing and other appurtenances and accessories and additions, improvements and replacements (the “Vessel”), was arrested on August 28, 2026 in this action brought by Plaintiff Merrimack County Savings Bank to enforce a preferred ship mortgage lien against the Vessel.

Any person asserting a right of possession or ownership interest in the Vessel must file a verified statement of right or interest with the Clerk of the United States District Court for the District of Massachusetts within seven (7) days after the final weekly publication of this Notice, which final weekly publication will occur on October 5, 2026. Any person filing a verified statement of right or interest must file and serve an answer within twenty-one (21) days after filing the verified statement. Failure to file a timely verified statement and answer may result in entry of in rem default and further relief against the Vessel. Plaintiff’s counsel is Derek T. Rocha, Verrill Dana LLP, One Federal Street, 20th Floor, Boston, MA 02110. Tel: (617) 309-2600; Email: drocha@verrill-law.com

HOROSCOPES

HAPPY BIRTHDAY for Monday, Oct. 5, 2026: You are sensual, optimistic, admirable, and fair. You're also charming and fun-loving. This is a year of learning and teaching. Take time for reflection. You might renew your spiritual beliefs. Explore philosophies that give you a better self-awareness and get you closer to the true meaning of your life.

ARIES (*March 21-April 19*)
Social plans are unpredictable today. Likewise, sports events and playful activities with children are potentially accident-prone. Be vigilant! Nevertheless, this is a powerful day to make creative advances in the arts, financial speculation, and the entertainment world. Tonight: Socialize!

TAURUS (*April 20-May 20*)
Because your home routine might be interrupted today, get dressed and stock the fridge. Be patient with family members. Once the dust settles, a conversation with someone older (perhaps a parent) might give some structure and direction to things. Tonight: Relax at home.

GEMINI (May 21-June 20)
Pay attention to what you say and do because this is a mildly accident-prone day. Keep your eyes open. On the upside, you might have some brilliant ideas because you can think outside the box. Later in the day, solid, practical solutions might occur to you. Tonight: An important conversation.

CANCER (June 21-July 22)
Keep an eye on your money and possessions today to protect them from loss, theft, or damage, because something unexpected might impact what you own. On the other hand, you might have some innovative moneymaking ideas that impress someone. Tonight: Check your money.

LEO (July 23-Aug. 22)
This is a tricky day. The Moon is in your sign lined up with Mars, Uranus, and Saturn, which means you'll feel ambitious, powerful, impulsive, and yet ready to give things a sober, second thought. Quite a mixture! Go slowly, but expect some great moments! Tonight: You win!

VIRGO (Aug. 23-Sept. 22)
Very likely, this is a restless day for you. It could be because of money and possessions, because these things are on your mind.

However, someone in a position of authority might catch you off guard today. Be alert. Tonight: Enjoy your privacy.

LIBRA (Sept. 23-Oct. 22)
A friend or a member of a group might surprise you today. Or, alternatively, you might surprise them. Travel plans and issues related to medicine, the law, and publishing are unpredictable. Fortunately, a discussion with a partner or spouse might anchor things for you in a solid way. Tonight: Talk to a friend.

SCORPIO (Oct. 23-Nov. 21)
You're high-viz today. People notice you. Meanwhile, something unexpected might occur that calls attention to you. You might have a clever idea or something unexpected occurs. Stay light on your feet. You're ready to work hard. Tonight: You're admired.

SAGITTARIUS (Nov. 22-Dec. 21)
Travel plans might be interrupted today, along with appointments related to medical, legal, or educational issues. Give yourself extra time to deal with the unexpected. You might have an important discussion about something related to your kids, a vacation, or an artistic project. Tonight: Explore and learn some-

thing new.

CAPRICORN (Dec. 22-Jan. 19)
Keep an eye on banking issues and anything to do with shared property, inheritances, taxes, debt, and anything you own jointly. This will be a focus today. Something unexpected could occur. A family member might help you solidify things. Tonight: Check your finances.

AQUARIUS (Jan. 20-Feb. 18)
Patience will be your best friend today, because important discussions with partners, close friends, and spouses are tricky. You might have to deal with someone a bit aggressive, even unpredictable. Social plans might change. Be vigilant about your kids. Tonight: Cooperate.

PISCES (Feb. 19-March 20)
Your job routine might be interrupted today, especially if you work from home. You're motivated to be productive — use this energy to make some long-range, practical plans for the future. Meanwhile, someone older or more experienced might have advice, probably related to earnings or possessions. Tonight: Work.

DAILY BRIDGE CLUB

BY FRANK STEWART
South dealer — N-S vulnerable

				North ♠ A Q 4 ♥ 4 2 ♦ A 7 3 2 ♣ A 6 4 2	
West ♠ J 9 ♥ Q J 10 6 5 ♦ Q 8 ♣ Q 10 8 5				East ♠ 10 8 5 3 ♥ K 9 8 7 ♦ 10 9 5 ♣ 9 7	
South ♠ K 7 6 2 ♥ A 3 ♦ K J 6 4 ♣ K J 3					
South	West	North	East		
1 NT	Pass	3 NT	All Pass		

Opening lead — ♥ Q

"If at first you don't succeed, rummage through the wastebasket in a desperate attempt to find the instructions." — Cy the Cynic

The problem some players have as declarer is that if at first they don't succeed, that's the end of it all. Against today's 3NT, West led the queen of hearts, and South took the ace and wanted the next eight tricks. He took the A-Q of spades and led a third spade to his king. A 3-3 break would have seen him home, but West pitched a club.

Declarer next led a club to dummy's ace and a club to his jack. Alas, West produced the queen, and the defense took four hearts and the ten of spades Down two.

South didn't succeed at first — or at second. He should have tried playing third. After the spades fail to break, South should take the A-K of diamonds. (He has eight diamonds and seven clubs, so the queen of diamonds is more likely to fall.)

When West's queen appears, South makes an overtrick. If instead East-West played low, South would finesse in clubs.

DAILY QUESTION You hold: ♠ A Q 4 ♥ 4 2 ♦ A 7 3 2 ♣ A 6 4 2. You open one diamond, and your partner bids one spade. The opponents pass. What do you say?

ANSWER: To bid two clubs next would be a clear error. You would suggest a two-suited hand when your actual hand is balanced, and your partner would correctly return to two diamonds with a weak responding hand and 5-4-2-2 pattern. Raise to two spades. Like some players, I would have preferred to open one club.

BY LISA WEIDENFELD

Summer H. Howell in Prime Video's new adaptation of "Carrie."

Stephen King's **"Carrie"** gets a new adaptation courtesy of showrunner Mike Flanagan, out Wednesday on Prime Video. Flanagan, who was born in Salem, is no stranger to adapting King — he adapted King's "Life of Chuck" into a 2024 movie starring Tom Hiddleston that Globe film critic Odie Henderson gave four stars. But he's also well-known as an adapter of literary horror, and previously made miniseries adaptations of Henry James's "The Turn of the Screw" (as "The Haunting of Bly Manor" in 2020) and Shirley Jackson's "The Haunting of Hill House" in 2018. His "Carrie" is set in the present day and stars Summer H. Howell in the lead role.

"Jamie Foxx: Take Care of Yourself" drops Wednesday on Hulu. The new comedy special from the actor and comic finds Foxx addressing the indignities of age, like being given a chair to perch on in the club, as well as his sister making fun of him for wearing a mock neck to go out. "You look old," she tells him. "No," counters Foxx. "I look presentable."

Netflix is probably hoping “Widow’s Bay” fans check out **“Below,”** out Thursday on the streamer. If what you liked about Widow’s Bay was a man in his 40s dealing with the horror of the supernatural in a seaside town, you may want to try this one, which stars Josh Hartnett as a fisherman in Newfoundland. Mackenzie Davis (“Halt and Catch Fire”) and

Charlie Heaton ("Stranger Things") costar, as does something ominous from the briny deep.

From the makers of “Ghosts” comes “**Eternally Yours**,” out Thursday at 8:30 p.m. on CBS. This time, instead of kooky ghosts having hijinks, it’s kooky vampires, who have been together for centuries. Ed Weeks (“The Mindy Project”) and Allegra Edwards (“Upland”) star as a couple adjusting to their vampire daughter (Helen J. Shen) dating a human guy (Jaren Lewison). Lewison also starred in *Mindy Kaling’s* “Never Have I Ever,” which is a fun coincidence for him and Weeks.

Michelle and Robert King, of “The Good Wife,” “Evil,” and various other excellent dramas, debut their new series, “**Cupertino**,” out Thursday at 10 p.m. on CBS. Mike Colter, who most recently starred on “Evil” but also appeared in the “Good Wife” universe, stars here as an attorney who decides to start helping the little guy out in Silicon Valley by taking on cases that confront tech giants. Fans of the Kings’ work may have noticed a certain skepticism regarding the tech industry from them, and this show is likely to be no different. There’s quite a spectrum of light to dark (and also, fairly mainstream to amazingly weird, as in “BrainDead”) in their shows; this one skews more toward the “Elsbeth” end than the “Evil” end. To be clear, the whole spectrum is a delight. I hope the presence of “Cupertino” means we get another weird one soon.

Dating apps lead to uncomfortable conversations

Q. I have been divorced for 39 years. I am 70 years old. Sporadically I pursue dates through apps. I always end up fed up and then I do not pursue the apps and therefore do not date for a while.

In the last couple years, I have joined the apps again. I know I am an open-minded person. However, recently the men who I have reached out to and have started communication with will immediately, for example, after one day of messaging back and forth, start informing me what they like to do to women and or what they like done to them sexually.

That would be fine in a week or two and/or after a couple dates but within 24 hours of messaging, I feel dumbfounded and feel maybe I need to be a little more lenient and open-minded in this area.

I just think it's too much too soon. I know it has always been said that men think of sex a lot more than women; however, I just find it surprising that at their ages, their mind is still approaching the topic so soon.

DATING DILEMMA

A. You are not overreacting at all.

For some people, these kinds of conversations early in a dating app conversation would be no problem. But they do pose a problem for you and that's important. You don't have to change your ways or engage in conversations that make you uncomfortable.

If you encounter a man who does this and you decide you want to give him another chance, you can always tell him: "This line of conversation has gotten too intimate for now. Can we reset?"

Ideally, he would recognize where he went wrong and course correct. But the fact that these men are jumping right to sex talk without any indication on your end that that's welcome indicates they just might not be matches.

There are a lot of fish in the sea. It might stress you less to just unmatched and move on to someone else or even look into apps that place a few more steps between matching and conversation.

Q. My husband is one of three brothers and a sister. Their mother died when they were young. When their dad passed the youngest brother professed the need for us all to stay in touch.

This brother and his wife live 15 minutes from the other brothers, but they never reach

out. They attend some family gatherings but never suggest a get-together or even call to check in.

When their sister passed away there were two memorials. They attended the first but ghosted everyone for the second. Emails and text messages were sent in advance. The messages were "read." My husband even called his brother that day with no answer. No call back.

Recently we decided to get together for lunch. We texted them and again the message was “read” but we got no response.

We had to learn of a death in the wife's family by reading it in the local newspaper and of her hospitalization from her social media post.

I understand privacy when you're sick, but a brief message would have been appreciated. Instead, we see a social media post saying, "as most of you know I spent my birthday in the hospital..."

I'm offended by their disrespect for the family. My feelings are hurt for their sister and her kids. The brothers brush it off, so why am I upset? Am I unjustified?

SENSITIVE SISTER-IN-LAW

A. You're part of this family, too, so you're not totally off base. But it does seem your husband and his brothers have reached a point of accepting their youngest sibling's style of communication and ability to show up (or lack thereof).

There may be other reasons for this behavior on his part, rooted in his background. Or your husband and his brothers simply may not put as much stock in family connectedness.

All of that is fine for them. But if it bothers you, it's worth working through. There isn't a way for the brother to go back and attend the second memorial, so while your feelings are hurt on behalf of the sister's kids, it may be best to redirect your energies to showing up for them wherever they are in their grieving process.

Think about what you want from this brother and his wife. An apology? A change in behavior? Then consider, based on past instances, whether this is something they're likely to provide.

You may be justified in being upset, and you could say something to them if you want. But your time may be better spent cultivating relationships with the people who do show up for the rest of the family.
